THE CONCEPT OF SHAREWARE.

You can use *Buttons!* to help design BWCC style bitmap buttons. It helps you by managing the six bitmaps that you require for (S)VGA and EGA support and by calculating appropriate shadows and effects which are consistent with the 'Borland look'.

This is a shareware version of the program:- [Registering](#)

How to ...

[Create a fresh button set](#)
[Generate the button effects \(shadows etc.\)](#)
[Write resource data](#)

Commands

[File menu commands](#)
[Button menu commands](#)

For more information on using BWCC style bitmap buttons see the Borland Documentation.

I will provide support for both registered and unregistered users by [email](#)

Disclaimer

I have made every attempt to ensure that this program works correctly. Much as I would like to I cannot guarantee that it is bug free. I do not accept any responsibility for loss or damages financial, broken marriages or other caused through the use of this program.

Should you find a problem with the program please let me know and I will fix it.

File Menu Commands

New

Creates a new set of buttons.

When you choose New, you can save changes to the file you have been working on.

Open

Opens a file.

When you choose Open, you can save changes to the file you have been working on.

Save

Saves changes to the file you have been working on.

When you choose Save, the file remains open so you can continue working on it.

Save As

Saves a new or existing file.

You can name a new file or save an existing file under a new name. The original file remains unchanged.

When you choose Save As, the file remains open so you can continue working on it.

Change working directory

Change the currently selected directory.

The current working directory is the directory where the button resource data files will be written. Changing the current working directory will not affect the directory that the button set is saved in when you select 'File | Save'.

Exit

Closes the file you have been working on and quits *Buttons!*

You can save the file before quitting.

Button Menu Commands

Set text

Allows you to enter the text which will appear along with the graphic on the face of the button.

Generate

Generates the buttons from the template. If you have edited buttons other than the template buttons these changes will be lost.

Arrange

Aligns the buttons in two rows of four.

If you have moved the buttons away from the original positions they can be replaced with this option.

Write resource data

Writes the 6 bitmaps to disk as 6 separate '.BMP' files and generates a '.RC' style file which you can #include in your main '.RC' file for your project.

Creating a set of buttons

To create a new set of buttons select the 'File | New' option from the menu. You will be presented with a dialogue box allowing you to set the size of buttons that you wish to create. The defaults given in the dialogue box are those usually used for BWCC Borland style buttons.

After you select the desired size the program creates eight blank buttons. You can edit any of these buttons with the Microsoft Paintbrush application by double clicking on the desired button face. However it is suggested that you only edit the template buttons (VGATemp and EGATemp) for a start. You should only edit the others as a last resort to touch up any effects you are not happy with and to add any effects of your own.

Before instructing *Buttons!* to generate effects you also need to select the 'Buttons | Set Text' menu option to edit the text you would like to appear on the button face.

Select 'Buttons | Generate' and *Buttons!* will add text, shadows and movement to your buttons. After generation you can edit the individual buttons to add any other effects.

Finally..... Select 'Buttons | Write resource data' to write the data to disk as individual bitmap files which are readable by the resource compiler (or Borland Resource Workshop)

Generating Button Effects

Generation of the following button effects is totally automatic:

- text and focused text
- shadow
- movement of text and shadows

After designing your button graphics on the EGA and VGA templates and entering text under the 'Buttons | Set Text' options simply select 'Buttons | Generate'. Any alterations that you may have made to the other buttons in the set will be lost.

Write resource data

This option allows you to write the button set to the disk as six '.BMP' files readable by the Resource Compiler or by Borland Resource Workshop.

Buttons! also writes a '.RC' compatible file which you can #include in your main '.RC' file.

The dialogue box allows you to give different names to the bitmap and '.RC' files though it is likely that the only setting you will want to change will be the 'Control ID'. The control ID is the button id in your dialogue box eg 'id_Register' or 'id_Save'.

Registering

This program was written by N.Waltham and may be freely copied for evaluation purposes only.

If you find this software useful you should register your copy. Registering your copy will result in you being sent a non shareware copy of the latest version of the program. If you do not register then there will be no further versions of this or any other program and the shareware concept will have failed.

If you subscribe to CompuServe you may register this software using their shareware registration service. You will need the **registration I.D.** which is **530**. You can reach the service using GO SWREG. If you register in this way I will usually send a registered version of the program by email. If you don't want me to do this (ie you have a slow modem) then let me know and send me a postal address and the media format that you prefer and I'll post you a copy.

There is no printed documentation available for this software. Sorry!

If you are not a member of CompuServe then further registration details can be obtained by [email](#).

The current cost of the software is \$25 US or £15 Sterling. However these prices are subject to change due to the volatile nature of exchange rates.
