Tips and Hints:

• All of the Windows software comes in two flavors: 16-bit (for Windows 3.1 users) and 32-bit (for Windows '95 and NT users). For the QuickTime Plug-in to work, it must be the same "flavor" as your version of the browser. When you download any of the software listed above, make sure you download the correct version: the 32-bit version if you are using a browser for Windows '95 or NT, or the 16-bit version if you are using a browser for Windows 3.1.

•If you are using the 16 bit version of Navigator 3.0, you must have SHARE.EXE loaded. Check your AUTOEXEC.BAT startup file for the statement "C:/DOS/SHARE.EXE" and add it if it is not there.
