#6:   PopMenus

Written by: Bryan Stearns

Versions: 1.00   August 1988

Components: `PopMenus.p`   August 1, 1988
                                   `PopMenus.r`   August 1, 1988
                                   `PopMenus.make`   August 1, 1988

___

PopMenus is a very simple demonstration of how to use pop-up menus in your application. It implements a pop-up menu as a `userItem` in a modal dialog box (this is a helpful example in its own right).

We recommend that you review Sample or TESample for the general structure and MultiFinder techniques you should use when writing a new application.
