# Chapter 1

## RDTextures

### 1.1 httpget.guide

httpget v1.0

Dodgy docs written by Michael Cheng

- Introduction
- History
- Requirements
- Problems
- Future
- Acknowledgements
- Author
- Appendix

### 1.2 Introduction

Playing with http apps gives me something to do to pass the time (eg lookup, unrealaudio et al).

The previous URL grabbing source I had was thanks to rauper on #amiga (Nick Loman), with modifications by Jeff Shepherd to get it working with gcc.

But now I've found a couple of generic unix C programs with source that do the same thing, and I've included both of them here as well as compiled versions (requiring ixemul43+).

[I also saw someone on csa.programmer wanting some URL grabbing source]

### 1.3 History

v1.0

27 September 1996

- initial release
- probably won't be another one.

## 1.4 Requirements

- a 68000+
- ixemul43+
- stack 20000

## 1.5 Problems

- Make sure you have ixemul43+ and ixnet installed.
- Give it extra stack if it's acting up. (Maybe i should learn how to include -gccstackextend)

## 1.6 Future

- not a lot.

## 1.7 Author
