1.2 Date/--background--

NAME

Date -- This module was designed to help calc. calendar dates (V33)

FUNCTION

I know about the date routines in the Amiga-OS(TM), but I decided not to use them because of their limited functionalities and of the portability of this module!

NOTES

A tropical year is 365.2422 days! / 365d, 5h, 48min, 46sec
A moon month is 29.53059 days! / 29d, 12h, 44min, 2.9 sec
A moon phase is 7.38265 days!

THANK

Thanx are going to the following people:
Danial Armor - For his hint about the Oberon-2 SHORT
command
Heinz Zemanek - For his great book
Christian Schaefer - For spending time on this lib with his
Borland C++ 4.0 compiler
Rita Reichl - For correcting my bad english ;-)

1.3 Date/--history--

NAME

history -- This is the development history of the Date module

VERSION

\$VER: Date 33.088 (11.08.1994)

HISTORY

16.01.1994 - Procedures: JulianLeapYear, GregorianLeapYear &
HeisLeapYear initiated.
22.01.1994 - Procedures: JulianMonthDays, GregorianMonthDays,
HeisMonthDays, JulianYearDays, GregorianYearDays,
HeisYearDays, JulianDayDiff, GregorianDayDiff,
HeisDayDiff, JulianDaySmaller, GregorianDaySmaller,
HeisDaySmaller, JulianWeekday, GregorianWeekday,
HeisWeekday, JulianDaysBeforeWeekday,
GregorianDaysBeforeWeekday, HeisDaysBeforeWeekday,
JulianDaysAfterWeekday, GregorianDaysAfterWeekday,
HeisDaysAfterWeekday JulianDiffDate, FreeDate
initiated.
Types: Weekdays, Date, DatePtr initiated.
Vars of Gregorian reform initiated
(for changing to different countries)
23.01.1994 - Procedures: JulianDiffDate finished,
GregorianDiffDate, HeisDiffDate, JYearToScaliger,

GYearToScaliger, HYearToScaliger, ScaligerYearToJ,
ScaligerYearToG, ScaligerYearToH, JSYearToJD,
GSYearToJD, HSYearToJD, JDtoMJD, MJDtoJD, JulianToJD,
GregorianToJD, HeisToJD, TimeToJD, JDToTime, FreeTime
initiated.
Types: Time, TimePtr initiated.

28.01.1994 - Procedures: GregorianMoonAge, MoonMonthAge,
GregorianEaster initiated.

30.01.1994 - Procedures: JulianDiffDate, GregorianDiffDate,
HeisDiffDate, JDtoTime, GregorianEaster edited
(changing return value from ptr to VAL variables).
Procedures: FreeDate, FreeTime deleted.
Types: Date, DatePtr, Time, TimePtr deleted (not
longer needed, because of the procedure changes).
Procedures: GregorianMoonAge, GregorianEaster changed
year parameter from CARDINAL to INTEGER (this is more
consistent to the rest of the library).
Bugs removed: GregorianWeekday, HeisWeekday
(before removing, the weekday for leapyears was
wrong)
Procedure: GregorianEaster finished.

30.01.1994 - Ported to Oberon-2

31.01.1994 - Compiled with Oberon-2 V3.11

12.02.1994 - Procedures: TimeZoneFactor, LMT, TimeToSec, SecToTime
initiated.
Version-String installed :)

12.02.1994 - Starting translation to SAS C 6.51
Date.h translated

13.02.1994 - Continuation of C translation

17.02.1994 - New Oberon-2 Port, because yesterday Daniel Armor
gives me a small hint about the SHORT command
(I did not know about this!)

17.02.1994 - Small bug in Autodocs removed
making this text as Date/--history-- autodoc

17.02.1994 - Continuation of C translation

18.02.1994 - Finished with C translation

19.02.1994 - C bugs removed (thanks to SAS for helping a C Lamer
like me!), some optimizations done too.

19.02.1994 - Oberon-2 version compiled with V40.17 includes

21.02.1994 - Starting to write Modula-II testmodule
Vars for the begining of Heis calculation initiated.
Fixed small bugs in GregorianWeekday, HeisWeekday,
TimeToSec, SecToTime
Return-value of LMT changed to LONGINT!
Converting testmodule to Oberon-2

22.02.1994 - Converting testmodule to C

23.02.1994 - I noticed, that I forgot the 3 functions
JulianWeek, GregorianWeek, HeisWeek

24.02.1994 - Initiated the 3 forgotten functions

26.02.1994 - Initiating new GregorianEastern with Gauß-algorithms
but ONLY for 1900-2099!

27.02.1994 - Bug fixed in JulianWeekday
Bugs fixed in JulianDayDiff, GregorianDayDiff,
HeisDayDiff
JulianDayGreater, GregorianDayGreater,
HeisDayGreater Initiated.

02.03.1994 - Small bug fixed in HeisDayDiff

Bugs from 27.02. fixed in Modula-II and Oberon-2 versions
 I found the way to extend Gregorian Easter!
 Little bug fixed in JulianWeek, GregorianWeek, HeisWeek (~(M2) is not !(C))

05.03.1994 - Some internal bugs removed
 New internal procedures GregorianSB, GregorianJHSB, GregorianJHStartSB!
 Extending GregorianEaster :)

11.03.1994 - Things from 05.03. done in Modula-II and Oberon

12.03.1994 - If __SASC is defined autoinitialization instead of _DateInit will be used!

13.03.1994 - After studying the SAS C Manual again I decided to check for __SASC_650 instead of __SASC because of the available priorities!
 Setting the priority of _DateInit for autoinitialization to 600!

15.03.1994 - Making Date as library

16.03.1994 - Some work on the Autodocs was done eliminating OldGregorianEaster by comments (ANSI: STOP bad standards like that there are NO nested comments possible in C!!!)

19.03.1994 - Some work on the Autodocs was done in the M2 Code

20.03.1994 - Some work on the Autodocs was done in the Oberon Code

22.03.1994 - In JDtoMJD, MJD to JD an L was added to the constant
 In GregorianWeekday(), HeisWeekday(), JulianDiffDate(), GregorianDiffDate(), HeisDiffDate(), JDToTime() I have inserted conversions (found with Borland C++ 4.0)

24.03.1994 - Making SunOS4.1.3, SunOS5.3(Solaris2.3) & RS6000 AIX3.2.? binaries with gcc
 Eliminating nested comments by inserting a space between / and * (I hate this ANSI C standard feature for comments :(

27.03.1994 - Adding library register assignments to the autodocs

03.04.1994 - Small fixes for the SAS C++ Compiler
 Small bug fixed in the M2 version of GregorianEaster

04.04.1994 - Adding some 'static' keywords

10.04.1994 - Changing from Shareware to Gift Ware ;-)

02.08.1994 - Small fixes in the Autodocs (thanks to Rita Reichl for correcting my bad english ;-)

11.08.1994 - Again small fixes in the Autodocs!

1.4 Date/_DateInit

NAME
 _DateInit -- Procedure to initialize this module! (V33)

SYNOPSIS
 _DateInit();

void _DateInit(void);

FUNCTION
 Initialize this module, like the modulebody in Modula-II or Oberon-2

INPUTS

None.

RESULT

None.

EXAMPLE

```
...
_DateInit();
...
```

NOTES

This function is only needed/available if you do not compile this with a SAS C Compiler (using Autoinitialization!)
If you are not using SASC - don't forget to init this module with this function - or you will get into trouble!!!

BUGS

unknown.

SEE ALSO

1.5 Date/GregorianCalendarDiff

NAME

GregorianCalendarDiff -- Calculates the days between 2 dates. (V33)

SYNOPSIS

```
days = GregorianCalendarDiff(day1,month1,year1,day2,month2,year2);
d0          d0    d1    d2    d3    d4    d5

long GregorianCalendarDiff(const unsigned short day1,
    unsigned short month1, int year1, const unsigned short day2,
    unsigned short month2, int year2);
```

FUNCTION

GregorianCalendarDiff gives you back the number of days between two specified dates.

INPUTS

day1 - day of the first date
month1 - month of the first date
year1 - year of the first date
day2 - day of the second date
month2 - month of the second month
year2 - year of the second date

RESULT

days - The number of days between the two dates
(positive if date1 <= date2).

EXAMPLE

```
...
```

```
days = GregorianCalendarDiff(18,9,1970,22,1,1994);
printf("Age of Kai Hofmann in days : %d\n",days);
...
```

NOTES

It is better only to use this function for years from -7 to 02.3200!

BUGS

If you use one of the dates 5.10.1582 to 14.10.1582 you will get a wrong output because these days don't exist!

SEE ALSO

GregorianCalendarLeapYear(), GregorianCalendarMonthDays(), GregorianCalendarYearDays(),
JulianCalendarDiff(), HeisCalendarDiff()

1.6 Date/GregorianCalendarGreater

NAME

GregorianCalendarGreater -- Checks if date1 is greater than date2. (V33)

SYNOPSIS

```
greater = GregorianCalendarGreater(day1,month1,year1,day2,month2,year2);
      d0          d0      d1      d2      d3      d4      d5
```

```
bool GregorianCalendarGreater(const unsigned short day1,
    const unsigned short month1, const int year1,
    const unsigned short day2, const unsigned short month2,
    const int year2);
```

FUNCTION

GregorianCalendarGreater test if date1 is greater than date2.

INPUTS

```
day1    - day of the first date
month1  - month of the first date
year1   - year of the first date
day2    - day of the second date
month2  - month of the second month
year2   - year of the second date
```

RESULT

greater - This is TRUE is date1 > date2 otherwise it's FALSE.

EXAMPLE

```
...
if (GregorianCalendarGreater(18,9,1970,22,1,1994))
    printf("<\n");
else
    printf(">=\n");
...
```

NOTES

It is better only to use this function for years from -7 to 3200!

BUGS

No known bugs.

SEE ALSO
 JulianDayGreater(), HeisDayGreater()

1.7 Date/GregorianDaysAfterWeekday

NAME

GregorianDaysAfterWeekday -- Returns the diff to wday after. (V33)

SYNOPSIS

```
days = GregorianDaysAfterWeekday(day,month,year,weekday);
d0          d0    d1    d2    d3
```

```
unsigned short GregorianDaysAfterWeekday(const unsigned short day,
    const unsigned short month, const int year,
    const Weekdays weekday);
```

FUNCTION

Returns the days to the weekday after the specified date.
 So if you specify the 22.1.1994 (Saturday) and Thursday
 you get back 5!
 If you specify the 22.1.1994 and Saturday you get back 0
 (the same day)!

INPUTS

```
day      - day of the date
month    - month of the date
year     - year of the date
weekday  - weekday to search for building difference
```

RESULT

days - The days after to the searched weekday.

EXAMPLE

```
...
days = GregorianDaysAfterWeekday(22,1,1994,Thursday);
...
```

NOTES

It is better to use this function only from -7 to 3200!

BUGS

See GregorianWeekday()!

SEE ALSO

GregorianWeekday(), JulianDaysAfterWeekday(), HeisDaysAfterWeekday()

1.8 Date/GregorianDaysBeforeWeekday

NAME

GregorianDaysBeforeWeekday -- Returns the diff to wday before. (V33)

SYNOPSIS

```
days = GregorianDaysBeforeWeekday(day,month,year,weekday);
d0          d0  d1    d2    d3
```

```
unsigned short GregorianDaysBeforeWeekday(const unsigned short day,
    const unsigned short month, const int year,
    const Weekdays weekday);
```

FUNCTION

Returns the days to the weekday before the specified date.
 So if you specify the 22.1.1994 (Saturday) and Thursday
 you get back 2!
 If you specify the 22.1.1994 and Saturday you get back 0
 (the same day)!

INPUTS

```
day      - day of the date
month    - month of the date
year     - year of the date
weekday  - weekday to search for building difference
```

RESULT

```
days - The days back to the searched weekday (1-7)
    If you get back 8 an error occurs!
```

EXAMPLE

```
...
days = GregorianDaysBeforeWeekday(22,1,1994,Thursday);
...
```

NOTES

It is better to use this function only from -7 to 3200!

BUGS

See GregorianWeekday()!

SEE ALSO

GregorianWeekday(), JulianDaysBeforeWeekday(), HeisDaysBeforeWeekday()

1.9 Date/GregorianDaySmaller

NAME

GregorianDaySmaller -- Checks if date1 is smaller than date2. (V33)

SYNOPSIS

```
smaller = GregorianDaySmaller(day1,month1,year1,day2,month2,year2);
d0          d0  d1    d2    d3    d4    d5
```

```
bool GregorianDaySmaller(const unsigned short day1,
    const unsigned short month1, const int year1,
    const unsigned short day2, const unsigned short month2,
    const int year2);
```

FUNCTION

GregorianDaySmaller test if date1 is smaller than date2.

INPUTS

day1 - day of the first date
 month1 - month of the first date
 year1 - year of the first date
 day2 - day of the second date
 month2 - month of the second month
 year2 - year of the second date

RESULT

smaller - This is TRUE is date1 < date2 otherwise it's FALSE.

EXAMPLE

```
...
if (GregorianDaySmaller(18,9,1970,22,1,1994))
    printf("<\n");
else
    printf(">=\n");
...
```

NOTES

It is better only to use this function for years from -7 to 3200!

BUGS

No known bugs.

SEE ALSO

JulianDaySmaller(), HeisDaySmaller()

1.10 Date/GregorianDiffDate

NAME

GregorianDiffDate -- Returns the diff date to another date. (V33)

SYNOPSIS

```
GregorianDiffDate(day,month,year,diffdays,dday,dmonth,dyear);
                d0    d1    d2        d3        a0    a1    a2
```

```
void GregorianDiffDate(const unsigned short day,
    const unsigned short month, const int year, int days,
    unsigned short *dday, unsigned short *dmonth, int *dyear);
```

FUNCTION

Returns the date which lies diffdays before/after the specified date.

INPUTS

day - day of the date
 month - month of the date
 year - year of the date
 diffdays - difference to the date in days

RESULT

dday - Destination day
 dmonth - Destination month

dyear - Destination year

EXAMPLE

```
...
GregorianDiffDate(23,1,1994,7,&dday,&dmonth,&dyear);
...
```

NOTES

It is better to use this function only from -7 to 3200!

BUGS

unknown.

SEE ALSO

GregorianDayDiff(), GregorianMonthDays(), JulianDiffDate(),
HeisDiffDate()

1.11 Date/GregorianEaster

NAME

GregorianEaster -- Returns the date of eastern in a year (V33)

SYNOPSIS

```
GregorianEaster(year, dday, dmonth);
    d0    a0    a1
```

```
void GregorianEaster(const int year, unsigned short *dday,
    unsigned short *dmonth);
```

FUNCTION

Returns the date of eastern for a specified year.

INPUTS

year - eastern is calculated for this year

RESULT

dday - day of easter-Sunday
dmonth - month of easter-Sunday

EXAMPLE

```
...
GregorianEaster(1994,&dday,&dmonth);
...
```

NOTES

Use this only for 1900 to 2099!

Tested for 1977-1994! But this formula is from Gauß - so it must be correct :) but extended by me (hope this will be a good thing too!)

BUGS

None.

SEE ALSO

GEP(), GregorianJHSB()

1.12 Date/GregorianLeapYear

NAME

GregorianLeapYear -- Checks if a year is a leap year. (V33)

SYNOPSIS

```
leapyear = GregorianLeapYear(year);
           d0           d0
```

```
bool GregorianLeapYear(const int year);
```

FUNCTION

GregorianLeapYear checks if a year is a leap year.
For years after 1582 all years devideable by 4 are leap years,
without years devideable by 100, but years devideable by 400
are leap years again!
For years before 1582 see JulianLeapYear().

INPUTS

year - The year which should be checked (from -32768 to 32767)
I think only values from -7 to 3200 are valid, because of
the variant that was done on -8 by Augustus and other things!

RESULT

leapyear - TRUE if the year is a leap year, otherwise false.

EXAMPLE

```
...
if (GregorianLeapYear(1994))
    printf("leap year!\n");
else
    printf("no leap year!\n");
...
```

NOTES

A year is 365.2425 days long!
Use this function only for values from -7 to 3199!

BUGS

No known bugs.

SEE ALSO

JulianLeapYear(), HeisLeapYear()

1.13 Date/GregorianMonthDays

NAME

GregorianMonthDays -- Gives back the number of days of a month. (V33)

SYNOPSIS

```
days = GregorianMonthDays(month, year);
           d0           d0       d1
```

```
unsigned short GregorianMonthDays(const unsigned short month,
```

```
const int year);
```

FUNCTION

GregorianCalendar gives you back the number of days a month in a specified year has.

For the year 1582 and the month 10 there are only 21 days, because of the Gregorian-reform 10 days are deleted from the month (for more - look out for books about this!)

INPUTS

month - The month from which you want to get the number of days.
year - The year in which the month is.

RESULT

days - The number of days the month uses, or 0 if you use a wrong month.

EXAMPLE

```
...
days = GregorianCalendar(1,1994);
printf("Days of January 1994 : %d\n",days);
...
```

NOTES

Use this function only for years from -7 to 3199!

BUGS

none.

SEE ALSO

GregorianCalendar(), JulianMonthDays(), HeisMonthDays()

1.14 Date/GregorianCalendarMoonAge

NAME

GregorianCalendarMoonAge -- Returns the age of the moon (V33)

SYNOPSIS

```
ep = GregorianCalendarMoonAge(day,month,year);
d0          d0    d1    d2
```

```
unsigned short GregorianCalendarMoonAge(const unsigned short day,
    const unsigned short month, const int year);
```

FUNCTION

Returns the age of the moon on a specified date.

INPUTS

day - For this day the age is calculated.
month - For this month the age is calculated.
year - For this year the age is calculated.

RESULT

ep - The age of the moon on the specified date.

```
EXAMPLE
...
ep = GregorianMoonAge(18,9,1994);
...

NOTES
Use this only for 1582 to 4100!
This is only a experimental version!

BUGS
unknown.

SEE ALSO

```

1.15 Date/GregorianToJD

```
NAME
GregorianToJD -- Returns the JD for a date. (V33)

SYNOPSIS
jd = GregorianToJD(day,month,year);
d0      d0    d1    d2

unsigned long GregorianToJD(const unsigned short day,
    const unsigned short month, const int year);

FUNCTION
Returns the JD for a Gregorian date.

INPUTS
day      - day of the date to convert
month    - month of the date to convert
year     - year of the date to convert

RESULT
jd - This is the JD

EXAMPLE
...
jd = GregorianToJD(23,1,1994);
...

NOTES
It is better to use this function only from -7 to 3200!

BUGS
unknown.

SEE ALSO
GYearToJD(),GYearToScaliger(),GregorianDayDiff(),JulianToJD(),
HeisToJD()
```

1.16 Date/GregorianWeek

NAME

GregorianWeek -- Gets the weeknumber of a specified date. (V33)

SYNOPSIS

```
weeknr = GregorianWeek(day,month,year);
      d0      d0      d1      d2
```

```
unsigned short GregorianWeek(const unsigned short day,
      const unsigned short month, const int year);
```

FUNCTION

GregorianWeek gets the weeknumber for a specified date.

INPUTS

```
day    - day of the date
month  - month of the date
year   - year of the date
```

RESULT

```
week - This is the number of the week the specified date lies in.
      If the first day in a new year is a Friday, Saturday or
      Sunday, this would be the last week of the last year!
      If the 29.12. is a Monday, the 30.12. is a Monday or a Tuesday,
      the 31.12. is a Monday, Tuesday or a Wednesday this is the
      first week of the next year!
```

EXAMPLE

```
...
weeknr = GregorianWeek(4,10,1582);
...
```

NOTES

It is better only to use this function for years from 0 to 3000!

BUGS

For years < 0 errors could occur.

SEE ALSO

JulianWeek(), HeisWeek(), GregorianWeekday(), GregorianDayDiff()

1.17 Date/GregorianWeekday

NAME

GregorianWeekday -- Gets the weekday of a specified date. (V33)

SYNOPSIS

```
weekday = GregorianWeekday(day,month,year);
      d0      d0      d1      d2
```

```
Weekdays GregorianWeekday(const unsigned short day,
      unsigned short month, int year);
```

```

FUNCTION
GregorianWeekday gets the weekday for a specified date.

INPUTS
day    - day of the date
month  - month of the date
year   - year of the date

RESULT
weekday - This result is of type:
    Weekdays = (dayerr,Monday,Tuesday,Wednesday,Thursday,Friday,
    Saturday,Sunday);
    dayerr will show you, that an error occurs!

EXAMPLE
...
weekday = GregorianWeekday(22,1,1994);
if (weekday == dayerr)
{
    ...
}
...

NOTES
It is better only to use this function for years from -7 to 3200!
In this version dayerr will only occur for the lost days :)

BUGS
It's not possible to use years < 0 (for more see JulianWeekday()).

SEE ALSO
JulianWeekday(),HeisWeekday()

1.18 Date/GregorianYearDays

```

NAME
GregorianYearDays -- Gives back the number of days in a year. (V33)

SYNOPSIS
days = GregorianYearDays(year);
d0      d0

unsigned int GregorianYearDays(const int year);

FUNCTION
GregorianYearDays gives you back the number of days in
a specified year.

INPUTS
year - The year in which to count the days.

RESULT
days - The number of days the year uses.

EXAMPLE

```

```
...
days = GregorianYearDays(1994);
printf("Days of 1994 : %d\n",days);
...

NOTES
It is better only to use this function for years from -7 to 3199!

BUGS
No known bugs.

SEE ALSO
GregorianMonthDays(), JulianYearDays(), HeisYearDays()
```

1.19 Date/GSYearToJD

```
NAME
GSYearToJD -- Calcs the JD from a Scaliger year. (V33)

SYNOPSIS
jd = GSYearToJD(syear);
d0      d0

unsigned long GSYearToJD(const unsigned int syear);

FUNCTION
Returns the Julianday of a Scaliger year.

INPUTS
syear      - Scaliger year

RESULT
jd - The Julianday

EXAMPLE
...
jd = GSYearToJD(4800);
...

NOTES
It is better to use this function only from 4707 to 7981!

BUGS
unknown.

SEE ALSO
JSYearToJD(), HYearToJD()
```

1.20 Date/GYearToScaliger

```
NAME
GYearToScaliger -- Returns the year as Scaliger year. (V33)
```

```
SYNOPSIS
syear = GYearToScaliger(year);
d0      d0

unsigned int GYearToScaliger(const int year);

FUNCTION
Returns the Scaliger year.

INPUTS
year      - Gregorian year

RESULT
syear - The Scaliger year

EXAMPLE
...
syear = GYearToScaliger(1994);
...

NOTES
It is better to use this function only from -7 to 3200!

BUGS
unknown.

SEE ALSO
JYearToScaliger(), HYearToScaliger()
```

1.21 Date/HeisDayDiff

```
NAME
HeisDayDiff -- Calculates the days between 2 dates. (V33)

SYNOPSIS
days = HeisDayDiff(day1,month1,year1,day2,month2,year2);
d0      d0      d1      d2      d3      d4      d5

long HeisDayDiff(const unsigned short day1, unsigned short month1,
                 int year1, const unsigned short day2, unsigned short month2,
                 int year2);

FUNCTION
HeisDayDiff gives you back the number of days between
two specified dates.

INPUTS
day1      - day of the first date
month1    - month of the first date
year1     - year of the first date
day2      - day of the second date
month2    - month of the second month
year2     - year of the second date
```

```

RESULT
days - The number of days between the two dates
        (positive if date1 <= date2).

EXAMPLE
...
days = HeisDayDiff(18,9,1970,22,1,1994);
printf("Age of Kai Hofmann in days : %d\n",days);
...

NOTES
It is better only to use this function for years from -7 to 8000!

BUGS
If you use on of the dates 5.10.1582 to 14.10.1582 you will get
wrong output because these days don't exist!

```

1.22 Date/HeisDayGreater

```

NAME
HeisDayGreater -- Checks if date1 is greater than date2. (V33)

SYNOPSIS
greater = HeisDayGreater(day1,month1,year1,day2,month2,year2);
        d0          d0      d1      d2      d3      d4      d5

bool HeisDayGreater(const unsigned short day1,
                    const unsigned short month1, const int year1,
                    const unsigned short day2, const unsigned short month2,
                    const int year2);

FUNCTION
HeisDayGreater test if date1 is greater than date2.

INPUTS
day1    - day of the first date
month1  - month of the first date
year1   - year of the first date
day2    - day of the second date
month2  - month of the second month
year2   - year of the second date

RESULT
greater - This is TRUE is date1 > date2 otherwise it's FALSE.

EXAMPLE
...
if (HeisDayGreater(18,9,1970,22,1,1994))
    printf(">\n");
else
    printf("<=\n");

```

...

NOTES

It is better only to use this function for years from -7 to 8000!

BUGS

No known bugs.

SEE ALSO

JulianDayGreater(), GregorianDayGreater()

1.23 Date/HeisDaysAfterWeekday

NAME

HeisDaysAfterWeekday -- Returns the diff to the wday after. (V33)

SYNOPSIS

```
days = HeisDaysAfterWeekday(day,month,year,weekday);
d0          d0  d1  d2  d3
```

```
unsigned short HeisDaysAfterWeekday(const unsigned short day,
    const unsigned short month, const int year,
    const Weekdays weekday);
```

FUNCTION

Returns the days to the weekday after the specified date.
So if you specify the 22.1.1994 (Saturday) and Thursday
you get back 5!
If you specify the 22.1.1994 and Saturday you get back 0
(the same day)!

INPUTS

day - day of the date
month - month of the date
year - year of the date
weekday - weekday to search for building difference

RESULT

days - The days after to the searched weekday.

EXAMPLE

...

```
days = HeisDaysAfterWeekday(22,1,1994,Thursday);
```

...

NOTES

It is better to use this function only from -7 to 8000!

BUGS

See HeisWeekday()!

SEE ALSO

HeisWeekday(), JulianDaysAfterWeekday(), GregorianDaysAfterWeekday()

1.24 Date/HeisDaysBeforeWeekday

NAME

HeisDaysBeforeWeekday -- Returns the diff to wday before. (V33)

SYNOPSIS

```
days = HeisDaysBeforeWeekday(day,month,year,weekday);
      d0          d0  d1    d2    d3
```

```
unsigned short HeisDaysBeforeWeekday(const unsigned short day,
                                     const unsigned short month, const int year,
                                     const Weekdays weekday);
```

FUNCTION

Returns the days to the weekday before the specified date.
 So if you specify the 22.1.1994 (Saturday) and Thursday
 you get back 2!
 If you specify the 22.1.1994 and Saturday you get back 0
 (the same day)!

INPUTS

```
day      - day of the date
month    - month of the date
year     - year of the date
weekday  - weekday to search for building difference
```

RESULT

```
days - The days back to the searched weekday (1-7)
      If you get back 8 an error occurs!
```

EXAMPLE

```
...
days = HeisDaysBeforeWeekday(22,1,1994,Thursday);
...
```

NOTES

It is better to use this function only from -7 to 8000!

BUGS

See HeisWeekday()!

SEE ALSO

HeisWeekday(), JulianDaysBeforeWeekday(), GregorianDaysBeforeWeekday()

1.25 Date/HeisDaySmaller

NAME

HeisDaySmaller -- Checks if date1 is smaller than date2. (V33)

SYNOPSIS

```
smaller = HeisDaySmaller(day1,month1,year1,day2,month2,year2);
      d0          d0  d1    d2    d3    d4    d5
```

```
bool HeisDaySmaller(const unsigned short day1,
```

```
const unsigned short month1, const int year1,
const unsigned short day2, const unsigned short month2,
const int year2);
```

FUNCTION

HeisDaySmaller test if date1 is smaller than date2.

INPUTS

```
day1    - day of the first date
month1  - month of the first date
year1   - year of the first date
day2    - day of the second date
month2  - month of the second month
year2   - year of the second date
```

RESULT

smaller - This is TRUE is date1 < date2 otherwise it's FALSE.

EXAMPLE

```
...
if (HeisDaySmaller(18,9,1970,22,1,1994))
    printf("<\n");
else
    printf(">=\n");
...
```

NOTES

It is better only to use this function for years from -7 to 8000!

BUGS

No known bugs.

SEE ALSO

JulianDaySmaller, GregorianDaySmaller()

1.26 Date/HeisDiffDate

NAME

HeisDiffDate -- Returns the date for a diff to another date. (V33)

SYNOPSIS

```
HeisDiffDate(day,month,year,diffdays,dday,dmonth,dyear);
           d0   d1   d2       d3       a0    a1    a2
```

```
void HeisDiffDate(const unsigned short day,
const unsigned short month, const int year, int days,
unsigned short *dday, unsigned short *dmonth, int *dyear);
```

FUNCTION

Returns the date which lies diffdays before/after the specified date.

INPUTS

```
day      - day of the date
month    - month of the date
year     - year of the date
```

diffdays - difference to the date in days

RESULT

dday - Destination day
 dmonth - Destination month
 dyear - Destination year

EXAMPLE

```
...
HeisDiffDate(23,1,1994,7,&dday,&dmonth,&dyear);
...
```

NOTES

It is better to use this function only from -7 to 8000!

BUGS

unknown.

SEE ALSO

HeisDayDiff(), HeisMonthDays(), JulianDiffDate(), GregorianDiffDate()

1.27 Date/HeisLeapYear

NAME

HeisLeapYear -- Checks if a year is a leap year. (V33)

SYNOPSIS

```
leapyear = HeisLeapYear(year);
    d0      d0
```

```
bool HeisLeapYear(const int year);
```

FUNCTION

HeisLeapYear checks if a year is a leap year.
 For years after 1582 see GregorianLeapYear(),
 The correction from N. Heis says, that all years devideable by
 3200 are no longer leap years!
 For years before 1582 see JulianLeapYear

INPUTS

year - The year which should be checked (from -32768 to 32767)
 I think only values from -7 to 32767 are valid, because of
 the variant that was done on -8 by Augustus and other things!

RESULT

leapyear - TRUE if the year is a leap year, otherwise false.

EXAMPLE

```
...
if (HeisLeapYear(1994))
    printf("leap year!\n");
else
    printf("no leap year!\n");
...
```

NOTES

A year is now 365.2421875 days!

Use this function only for values from -7 to 8000!

BUGS

No known bugs.

SEE ALSO

JulianLeapYear(),GregorianLeapYear()

1.28 Date/HeisMonthDays

NAME

HeisMonthDays -- Gives back the number of days of a month. (V33)

SYNOPSIS

```
days = HeisMonthDays(month,year);  
d0      d0      d1
```

```
unsigned short HeisMonthDays(const unsigned short month,  
                             const int year);
```

FUNCTION

HeisMonthDays gives you back the number of days a month in a specified year has.

For the year 1582 and the month 10 there are only 21 days, because of the Gregorian-reform 10 days are deleted from the month (for more - look out for books about this!)

INPUTS

month - The month from which you want to get the number of days.
year - The year in which the month is.

RESULT

days - The number of days the month uses, or 0 if you use a wrong month.

EXAMPLE

```
...  
days = HeisMonthDays(1,1994);  
printf("Days of January 1994 : %d\n",days);  
...
```

NOTES

Use this function only for years from -7 to 8000!

BUGS

See GregorianMonthDays!

SEE ALSO

HeisLeapYear(),JulianMonthDays(),GregorianMonthDays()

1.29 Date/HeisToJD

NAME

HeisToJD -- Returns the JD for a date. (V33)

SYNOPSIS

```
jd = HeisToJD(day,month,year);  
d0      d0  d1  d2
```

```
unsigned long HeisToJD(const unsigned short day,  
    const unsigned short month, const int year);
```

FUNCTION

Returns the JD for a Heis date.

INPUTS

```
day      - day of the date to convert  
month    - month of the date to convert  
year     - year of the date to convert
```

RESULT

jd - This is the JD

EXAMPLE

```
...  
jd = HeisToJD(23,1,1994);  
...
```

NOTES

It is better to use this function only from -7 to 3268!

BUGS

unknown.

SEE ALSO

HSYearToJD(), HYearToScaliger(), HeisDayDiff(), JulianToJD(), HeisToJD()

1.30 Date/HeisWeek

NAME

HeisWeek -- Gets the weeknumber of a specified date. (V33)

SYNOPSIS

```
weeknr = HeisWeek(day,month,year);  
d0      d0  d1  d2
```

```
unsigned short HeisWeek(const unsigned short day,  
    const unsigned short month, const int year);
```

FUNCTION

HeisWeek gets the weeknumber for a specified date.

INPUTS

```
day      - day of the date
```

month - month of the date
 year - year of the date

RESULT

week - This is the number of the week the specified date lies in.
 If the first day in a new year is a Friday, Saturday or Sunday, this would be the last week of the last year!
 If the 29.12. is a Monday, the 30.12. is a Monday or a Tuesday, the 31.12. is a Monday, Tuesday or a Wednesday this is the first week of the next year!

EXAMPLE

```
...
weeknr = HeisWeek(4,10,1582);
...
```

NOTES

It is better only to use this function for years from 0 to 8000!

BUGS

For years < 0 errors could occur.

SEE ALSO

JulianWeek(), GregorianWeek(), HeisWeekday(), HeisDayDiff()

1.31 Date/HeisWeekday

NAME

HeisWeekday -- Gets the weekday of a specified date. (V33)

SYNOPSIS

```
weekday = HeisWeekday(day,month,year);
      d0          d0    d1    d2
```

```
Weekdays HeisWeekday(const unsigned short day, unsigned short month,
      int year);
```

FUNCTION

HeisWeekday gets the weekday for a specified date.

INPUTS

day - day of the date
 month - month of the date
 year - year of the date

RESULT

weekday - This result is of type:
 Weekdays = (dayerr, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday);
 dayerr will show you, that an error occurs!

EXAMPLE

```
...
weekday = HeisWeekday(22,1,1994);
if (weekday == dayerr)
```

```

{
    ...
}
...

NOTES
It is better only to use this function for years from -7 to 8000!
In this version dayerr will only occur for the lost days :)

BUGS
It is not possible to use year < 0 (see JulianWeekday() for more).

SEE ALSO
JulianWeekday(),GregorianWeekday()
```

1.32 Date/HeisYearDays

```

NAME
HeisYearDays -- Gives back the number of days in a year. (V33)

SYNOPSIS
days = HeisYearDays(year);
d0      d0

unsigned int HeisYearDays(const int year);

FUNCTION
HeisYearDays gives you back the number of days in
a specified year.

INPUTS
year - The year in which to count the days.

RESULT
days - The number of days the year uses.

EXAMPLE
...
days = HeisYearDays(1994);
printf("Days of 1994 : %d\n",days);
...

NOTES
It is better only to use this function for years from -7 to 8000!

BUGS
No known bugs.

SEE ALSO
HeisMonthDays(), JulianYearDays(), GregorianYearDays()
```

1.33 Date/HSYearToJD

NAME
HYearToJD -- Calcs the JD from a Scaliger year. (V33)

SYNOPSIS
jd = HYearToJD(syear);
d0 d0

unsigned long HYearToJD(const unsigned int syear);

FUNCTION
Returns the Julianday of a Scaliger year.

INPUTS
syear - Scaliger year

RESULT
jd - The Julianday

EXAMPLE
...
jd = HYearToJD(6700);
...

NOTES
It is better to use this function only from 4707 to 7981!
In this version only GYearToJD() is called, because the
Scaliger period is only valid to 3268

BUGS
unknown.

SEE ALSO
JYearToJD(), GYearToJD()

1.34 Date/HYearToScaliger

NAME
HYearToScaliger -- Returns the year as Scaliger year. (V33)

SYNOPSIS
syear = HYearToScaliger(year);
d0 d0

unsigned int HYearToScaliger(const int year);

FUNCTION
Returns the Scaliger year.

INPUTS
year - Heis year

RESULT
syear - The Scaliger year

```
EXAMPLE
...
syear = HYearToScaliger(1994);
...

NOTES
It is better to use this function only from -7 to 8000!

BUGS
The Scaliger period is defined to 3268!!!.

SEE ALSO
JYearToScaliger(), GYearToScaliger()
```

1.35 Date/JDtoMJD

```
NAME
JDtoMJD -- Switches from JD to MJD. (V33)

SYNOPSIS
mjd = JDtoMJD(jd);
d0      d0

unsigned long JDtoMJD(const unsigned long jd);

FUNCTION
Returns the Modified Julianday of a Julianday.

INPUTS
jd - Julianday

RESULT
mjd - The Modified Julianday

EXAMPLE
...
mjd = JDtoMJD(2449354);
...

NOTES
none

BUGS
Only use this function for jd > 2400001, because mjd is only
defined for this, otherwise system will crash!

SEE ALSO
MJDtoJD()
```

1.36 Date/JDToTime

NAME

JDToTime -- Returns the real time for a JD time. (V33)

SYNOPSIS

```
JDToTime(jd,rhour,rmin,rsec);  
    d0  a0      a1  a2
```

```
void JDToTime(float jd, unsigned short *rhour, unsigned short *rmin,  
              unsigned short *rsec);
```

FUNCTION

Returns the real time for a JD time.

INPUTS

jd - JD time

RESULT

rhour - 24 hour real time
rmin - real minutes
rsec - real seconds

EXAMPLE

```
...  
JDToTime(0.76543,&rhour,&rmin,&rsec);  
...
```

NOTES

none.

BUGS

If jd is > 0 (including days) there will be occur arithmetic bugs!

SEE ALSO

1.38 Date/JulianDayDiff

NAME

JulianDayDiff -- Calculates the days between 2 dates. (V33)

SYNOPSIS

```
days = JulianDayDiff(day1,month1,year1,day2,month2,year2);
d0      d0      d1      d2      d3      d4      d5
```

```
long JulianDayDiff(const unsigned short day1, unsigned short month1,
    int year1, const unsigned short day2, unsigned short month2,
    int year2);
```

FUNCTION

JulianDayDiff gives you back the number of days between two specified dates.

INPUTS

```
day1    - day of the first date
month1  - month of the first date
year1   - year of the first date
day2    - day of the second date
month2  - month of the second month
year2   - year of the second date
```

RESULT

days - The number of days between the two dates
(positive if date1 <= date2).

EXAMPLE

```
...
days = JulianDayDiff(18,9,1970,22,1,1994);
printf("Age of Kai Hofmann in days : %d\n",days);
...
```

NOTES

It is better only to use this function for years from -7 to 1582!

BUGS

No known bugs.

1.39 Date/JulianDayGreater

NAME
 JulianDayGreater -- Checks if date1 is greater than date2. (V33)

SYNOPSIS
 greater = JulianDayGreater(day1, month1, year1, day2, month2, year2);
 d0 d0 d1 d2 d3 d4 d5

```
bool JulianDayGreater(const unsigned short day1,
                     const unsigned short month1, const int year1,
                     const unsigned short day2, const unsigned short month2,
                     const int year2);
```

FUNCTION
 JulianDayGreater test if date1 is greater than date2.

INPUTS
 day1 - day of the first date
 month1 - month of the first date
 year1 - year of the first date
 day2 - day of the second date
 month2 - month of the second month
 year2 - year of the second date

RESULT
 greater - This is TRUE is date1 > date2 otherwise it's FALSE.

EXAMPLE
 ...
 if (JulianDayGreater(18, 9, 1970, 22, 1, 1994))
 printf(">\n");
 else
 printf("<=\n");
 ...

NOTES
 It is better only to use this function for years from -7 to 1582!

BUGS
 No known bugs.

1.40 Date/JulianDaysAfterWeekday

NAME

```
JulianDaysAfterWeekday -- Returns the diff to the wday after. (V33)
```

SYNOPSIS

```
days = JulianDaysAfterWeekday(day,month,year,weekday);
      d0          d0   d1   d2     d3
```

d0 d0 d1 d2 d3

```
unsigned short JulianDaysAfterWeekday(const unsigned short day,  
    const unsigned short month, const int year,  
    const Weekdays weekday);
```

FUNCTION

Returns the days to the weekday after the specified date.

So if you specify the 22.1.1994 (Saturday) and Thursday
you get back 5!

If you specify the 22.1.1994 and Saturday you get back 0 (the same day)!

INPUTS

```

day      - day of the date
month    - month of the date
year     - year of the date
weekday  - weekday to search for building difference

```

RESULT

days - The days after to the searched weekday.

EXAMPLE

```
...
days = JulianDaysAfterWeekday(22,1,1994,Thursday);
...
```

```
days = JulianDaysAfterWeekday(22,1,1994,Thursday);
```

• • •

NOTES

It is better to use this function only from -7 to 1582!

BUGS

See `JulianWeekday()`!

SEE ALSO

JulianWeekday(), GregorianDaysAfterWeekday(), HeisDaysAfterWeekday()

1.41 Date/JulianDaysBeforeWeekday

NAME _____

JulianDaysBeforeWeekday -- Returns the diff to the wday before. (V33)

SYNOPSIS

```
days = JulianDaysBeforeWeekday(day, month, year, weekday);
      d0      d0 d1      d2      d3
```

d0 d0 d1 d2 d3

```
unsigned short JulianDaysBeforeWeekday(const unsigned short day,
    const unsigned short month, const int year,
    const Weekdays weekday);
```

```

FUNCTION
Returns the days to the weekday before the specified date.
So if you specify the 22.1.1994 (Saturday) and Thursday
you get back 2!
If you specify the 22.1.1994 and Saturday you get back 0
(the same day)!

INPUTS
day      - day of the date
month    - month of the date
year     - year of the date
weekday  - weekday to search for building difference

RESULT
days - The days back to the searched weekday (0-6)
      - If you get back 8 an error occurs!

EXAMPLE
...
days = JulianDaysBeforeWeekday(22,1,1994,Thursday);
...

NOTES
It is better to use this function only from -7 to 02.1582!

BUGS
See JulianWeekday()!

1.42 Date/JulianDaySmaller

```

NAME
JulianDaySmaller -- Checks if date1 is smaller than date2. (V33)

SYNOPSIS
smaller = JulianDaySmaller(day1,month1,year1,day2,month2,year2);
      d0          d0      d1      d2      d3      d4      d5

bool JulianDaySmaller(const unsigned short day1,
                      const unsigned short month1, const int year1,
                      const unsigned short day2, const unsigned short month2,
                      const int year2);

FUNCTION
JulianDaySmaller test if date1 is smaller than date2.

INPUTS
day1      - day of the first date
month1    - month of the first date
year1     - year of the first date
day2      - day of the second date
month2    - month of the second month
year2     - year of the second date

```

```

RESULT
smaller - This is TRUE is date1 < date2 otherwise it's FALSE.

EXAMPLE
...
if (JulianDaySmaller(18,9,1970,22,1,1994))
    printf("<\n");
else
    printf(">=\n");
...

NOTES
It is better only to use this function for years from -7 to 1582!

BUGS
No known bugs.

1.43 Date/JulianDiffDate

```

NAME
JulianDiffDate -- Returns the date for a diff to another date. (V33)

SYNOPSIS
JulianDiffDate(day,month,year,diffdays,dday,dmonth,dyear);
    d0    d1    d2    d3    a0    a1    a2

void JulianDiffDate(const unsigned short day,
    const unsigned short month, const int year, int days,
    unsigned short *dday, unsigned short *dmonth, int *dyear);

FUNCTION
Returns the date which lies diffdays before/after the specified date.

INPUTS
day        - day of the date
month      - month of the date
year       - year of the date
diffdays  - difference to the date in days

RESULT
dday       - Destination day
dmonth     - Destination month
dyear      - Destination year

EXAMPLE
...
JulianDiffDate(23,1,1994,7,&dday,&dmonth,&dyear);
...

NOTES
It is better to use this function only from -7 to 1582!

```

BUGS
unknown.

1.44 Date/JulianLeapYear

NAME
`JulianLeapYear` -- Checks if a year is a leap year. (V33)

SYNOPSIS
`leapyear = JulianLeapYear(year);`
 `d0` `d0`

`bool JulianLeapYear(const int year);`

FUNCTION
`JulianLeapYear` checks if a year is a leap year in the julian calendar
For years after Chr. it checks if the year is devideable by 4.
For years before Chr. a leap year must have a modulo 4 value of 1

INPUTS
`year` - The year which should be checked (from -32768 to 32767)
 I think only values from -7 to 32767 are valid, because of
 the variant that was done on -8 by Augustus and other things!

RESULT
`leapyear` - TRUE if the year is a leap year, otherwise false.

EXAMPLE
...
`if (JulianLeapYear(1994))`
 `printf("leap year!\n");`
`else`
 `printf("no leap year!\n");`
...

NOTES
A year is 365.25 days long!
Use this function only for values from -7 to 1582!

BUGS
No known bugs.

SEE ALSO
`GregorianLeapYear()`, `HeisLeapYear()`

1.45 Date/JulianMonthDays

NAME

JulianMonthDays -- Gives back the number of days of a month. (V33)

SYNOPSIS

```
days = JulianMonthDays(month,year);
d0      d0      d1
```

```
unsigned short JulianMonthDays(const unsigned short month,
                                const int year);
```

FUNCTION

JulianMonthDays gives you back the number of days a month in a specified year has.

INPUTS

month - The month from which you want to get the number of days.
year - The year in which the month is.

RESULT

days - The number of days the month uses, or 0 if you use a wrong month.

EXAMPLE

```
...
days = JulianMonthDays(1,1994);
printf("Days of January 1994 : %d\n",days);
...
```

NOTES

It is better only to use this function for years from -7 to 09.1582!

BUGS

No known bugs.

SEE ALSO

1.46 Date/JulianToJD

NAME

JulianToJD -- Returns the JD for a date. (V33)

SYNOPSIS

```
jd = JulianToJD(day,month,year);
d0      d0      d1      d2
```

```
unsigned long JulianToJD(const unsigned short day,
                          const unsigned short month, const int year);
```

FUNCTION

Returns the JD for a Julian date.

INPUTS

day - day of the date to convert

month - month of the date to convert
 year - year of the date to convert

RESULT

jd - This is the JD

EXAMPLE

```
...
jd = JulianToJD(23,1,1994);
...
```

NOTES

It is better to use this function only from -7 to 1582!

BUGS

unknown.

1.47 Date/JulianWeek

NAME

JulianWeek -- Gets the weeknumber of a specified date. (V33)

SYNOPSIS

```
weeknr = JulianWeek(day,month,year);
      d0      d0      d1      d2
```

```
unsigned short JulianWeek(const unsigned short day,
      const unsigned short month, const int year);
```

FUNCTION

JulianWeek gets the weeknumber for a specified date.

INPUTS

day - day of the date
 month - month of the date
 year - year of the date

RESULT

week - This is the number of the week the specified date lies in.
 If the first day in a new year is a Friday, Saturday or
 Sunday, this would be the last week of the last year!
 If the 29.12. is a Monday, the 30.12. is a Monday or a Tuesday,
 the 31.12. is a Monday, Tuesday or a Wednesday this is the
 first week of the next year!

EXAMPLE

```
...
weeknr = JulianWeek(4,10,1582);
...
```

NOTES

It is better only to use this function for years from 0 to 1582!

BUGS

For years < 0 errors could occur.

SEE ALSO

GregorianWeek(), HeisWeek(), JulianWeekday(), JulianDayDiff()

1.48 Date/JulianWeekday

NAME

JulianWeekday -- Gets the weekday of a specified date. (V33)

SYNOPSIS

```
weekday = JulianWeekday(day,month,year);
      d0      d0      d1      d2
```

```
Weekdays JulianWeekday(const unsigned short day,
      unsigned short month, int year);
```

FUNCTION

JulianWeekday gets the weekday for a specified date.

INPUTS

day - day of the date
month - month of the date
year - year of the date

RESULT

weekday - This result is of type:
Weekdays = (dayerr,Monday,Tuesday,Wednesday,Thursday,Friday,
Saturday,Sunday);
dayerr will show you, that an error occurs!

EXAMPLE

```
...
weekday = JulianWeekday(4,10,1582);
if (weekday == dayerr)
{
    ...
}
...
```

NOTES

It is better only to use this function for years from 1 to 02.1582!
In this version no dayerr will occur!

BUGS

For years <= 0 errors could occur, or systemcrashes(?).

SEE ALSO

GregorianWeekday(), HeisWeekday()

1.49 Date/JulianYearDays

NAME

JulianYearDays -- Gives back the number of days in a year. (V33)

SYNOPSIS

```
days = JulianYearDays(year);  
d0      d0
```

```
unsigned int JulianYearDays(const int year);
```

FUNCTION

JulianYearDays gives you back the number of days in a specified year.

INPUTS

year - The year in which to count the days.

RESULT

days - The number of days the year uses.

EXAMPLE

```
...  
days = JulianYearDays(1994);  
printf("Days of 1994 : %d\n",days);  
...
```

NOTES

It is better only to use this function for years from -7 to 1581!

BUGS

No known bugs.

1.50 Date/JYearToScaliger

NAME

JYearToScaliger -- Returns the year as Scaliger year. (V33)

SYNOPSIS

```
syear = JYearToScaliger(year);  
d0      d0
```

```
unsigned int JYearToScaliger(const int year);
```

FUNCTION

Returns the Scaliger year.

INPUTS

year - Julian year

RESULT

syear - The Scaliger year

EXAMPLE

...

```
syear = JYearToScaliger(1582);
```

...

NOTES

It is better to use this function only from -7 to 1582!

BUGS

unknown.

1.51 Date/LMT

NAME

LMT -- Calculates your local time in your timezone (V33)

SYNOPSIS

```
secs = LMT(secs, meridian, pos);
```

```
  d0      d0      d1      d2
```

```
unsigned long LMT(const unsigned long secs,
                  const float meridiandegree, const float posdegree);
```

FUNCTION

Calculates your Local Mean Time of your place!

INPUTS

secs - Seconds of the running day (hours*3600+min*60+sec)

meridian - Degrees of your timezone-meridian

pos - Degrees of your place

RESULT

secs - Local seconds of the running day

EXAMPLE

...

```
secs = LMT(76080, -15.0, -8.923055556);
```

...

NOTES

none

BUGS

No errorcheck, if you put in valid degrees (-180 to +180)

SYNOPSIS

```
jd = MJDtoJD(mjd);  
d0      d0
```

```
unsigned long MJDtoJD(const unsigned long mjd);
```

FUNCTION

Returns the Julianday of a Modified Julianday.

INPUTS

mjd - Modified Julianday

RESULT

jd - The Julianday

EXAMPLE

```
...  
jd = JDtoMJD(49353);  
...
```

NOTES

none

BUGS

SYNOPSIS

```
year = ScaligerYearToG(syear);  
d0      d0
```

```
int ScaligerYearToG(const unsigned int syear);
```

FUNCTION

Returns the Gregorian year of a Scaliger year.

INPUTS

syear - Scaliger year

RESULT

year - The Gregorian year

```
EXAMPLE
...
year = ScaligerYearToG(6400);
...

NOTES
It is better to use this function only from 4707 to 7981!

SYNOPSIS
year = ScaligerYearToH(syear);
d0      d0

int ScaligerYearToH(const unsigned int syear);

FUNCTION
Returns the Heis year of a Scaliger year.

INPUTS
syear      - Scaliger year

RESULT
year - The Heis year

EXAMPLE
...
year = ScaligerYearToH(7000);
...

NOTES
It is better to use this function only from 4707 to 7981!

BUGS
unknown.

1.56 Date/SecToTime

```
NAME
SecToTime -- Returns the time from seconds (V33)

SYNOPSIS
SecToTime(secs, hour, min, sec);
          d0  a0  a1  a2

SecToTime(unsigned long secs, unsigned short *hour,
          unsigned short *min, unsigned short *sec);

FUNCTION
Gives you back the time from the specified seconds

INPUTS
secs - Time in seconds

RESULT
hour - hours (0-23)
min  - minutes (0-59)
sec  - seconds (0-59)

EXAMPLE
...
```

```
SecToTime(76860,&hour,&min,&sec);  
...
```

NOTES
Don't forget to convert 24h time to AM/PM time if needed!

BUGS
No errorcheck, if you use a valid time

SEE ALSO
TimeToSec()

1.57 Date/TimeToJD

NAME
TimeToJD -- Returns the JD for a time. (V33)

SYNOPSIS
jd = TimeToJD(hour,min,sec);
d0 d0 d1 d2

```
float TimeToJD(const unsigned short hour, const unsigned short min,  
               const unsigned short sec);
```

FUNCTION
Returns the JD for a specified time.

INPUTS
hour - hour of the time to convert
min - minute of the time to convert
sec - sec. of the time to convert

RESULT
jd - This is the JD time

EXAMPLE
...
jd = TimeToJD(16,33,0);
...

NOTES
none

BUGS
There is no check, if the specified time is a valid time!

SEE ALSO
JDToTime()

1.58 Date/TimeToSec

NAME

TimeToSec -- Returns the time in seconds (V33)

SYNOPSIS

```
secs = TimeToSec(hour,min,sec);  
      d0      d0      d1  d2
```

```
unsigned long TimeToSec(const unsigned short hour,  
                        const unsigned short min, const unsigned short sec);
```

FUNCTION

Gives you back the time in seconds

INPUTS

hour - hours you want (0-23)
min - minutes you want (0-59)
sec - seconds you want (0-59)

RESULT

secs - Time in seconds

EXAMPLE

```
...  
secs = TimeToSec(21,15,00);  
...
```

NOTES

Don't forget to convert AM/PM time to 24h time!

BUGS

No errorcheck, if you use a valid time

SEE ALSO

SecToTime()

1.59 Date/TimeZoneFactor

NAME

TimeZoneFactor -- Returns the value you have to add to GMT time (V33)

SYNOPSIS

```
addhours = TimeZoneFactor(degrees);  
          d0              d0
```

```
short TimeZoneFactor(const short degree);
```

FUNCTION

This gives you the hours you have to add to GMT time, specified on the fact, that a timezone is 15 degrees and that GMT is centered on 0 degrees!

INPUTS

degrees - Position of timezone you live in
(from -180 east to +180 west)

RESULT

addhours - Time to add to GMT time to get your locale zone time
(-12 to +12)

EXAMPLE

```
...  
addhours = TimeZoneFactor(-8);  
...
```

NOTES

none

BUGS

No errorcheck, if you put in valid degrees (-180 to +180)
Only full degrees are supportet, keep sure that you
round in the right way for 0.x degree places
I am not sure about the correct +/- behaviour!!!
