

## **UMCP™ Tools V1.0.0 Release Notes.**

UMCP Tools is a utility to assist with file transfer and conversion between a UN\*X system and a Mac. There are three primary conversion functions.

1. UUENCODE/UUDECODE. These options allow you to encode a file into a hex-like ASCII format used by UN\*X systems to mail binary files. You may also decode a file that has come in from a remote system. This function only deals with the Mac Data resource of a file.
2. Mac->UN\*X/UN\*X->Mac. These options allow you to convert Mac Text format to UN\*X text format and back. Mac text ends lines with a "Carriage Return". UN\*X text ends line with a "NewLine" character.
3. Application->BIN/BIN->Application. This function can be used to convert both data and resource forks of a Mac file into a data fork only. This data only file can then be UUENCODED for transmission to a UN\*X system. The reverse function allows you to convert a like encoded file back into normal Mac format. This operation will not preserve private "GET INFO" comments.

**"UMCP™ Tools" may be copied freely on your network. The "UMCP™ Gateway" is licensed only for a single system.**

**"UMCP™ Tools" is considered "HappyWare". If you use it please send us a postcard of your hometown, and remember to smile. Please note that we retain all rights to this program.
