Author: Eric Tremblay and Rene Guimont

Features

- Programs and files for the Atari ST, TT and Falcon computers plus a section for the Portfolio palmtop computer. Also includes text files and graphics for the Lynx and Jaguar video game system.
- All programs are ready to run directly from the CDROM.
- Programs and files in categories such as accessories, archivers, astronomy, database, utilities, fonts, games, gnu, programming, screen savers, virus, text editors.
- Almost 50 megabytes of games and entertainment software. Divided into games that work on a color system and games that run only on a monochrome system.
- More then 15 megs of fonts which can be used in desktop publishing programs.
- A lot of source code!
- The GEMini cdrom is organized so it can be used on a BBS. All the non-compressed files have a compressed version located in the zip folder. So BBS operators can easily make thousand of files available to their users.
- Each directory contains an index and a list of files to make it easier for a user to locate a file.
