# Chapter 1

## MicroIRC

### 1.1 MicroIRC.guide

MicroIRC

\*\*\*\*\*

Welcome to MicroIRC, the AmigaOS IRC client.

- Introduction -

Copyright	Copyrights, author info and more.
IRC	What is IRC, by the way?
Installation	How to setup MicroIRC.
Connecting	Let's have a start.
CTCP	Sending commands to other people.
DCC	Getting nearer to your neighbour.

- Reference section -

Commands	Commands built into MicroIRC.
Configuration	Customize your environment.
CTCP Setup	Heavy magic.
ARexx	Even heavier magic.
Event handling	Do something automatically.

- other stuff: -

## 1.8 MicroIRC.guide/Commands

Commands  
\*\*\*\*\*

Overview  
=====

MicroIRC has several builtin commands. Some of this commands are processed locally, whereas others are send to the IRC server.

Commands generally start with a / to differentiate them from normal text. If you want to use the / character at the start of normal text, use // instead.

Many commands require a channel name as a parameter. MicroIRC will automatically fill in the channel name of the current window if you don't specify a channel name on your own.

For commands which require a nick name (e.g. /MSG or /OP, there are three special shortcut arguments:

- The period is replaced with the nickname of the last person you have send a private message to.

,

The comma is replaced with the nickname of the last person who send a message to you. Be careful with this, since you might easily address the wrong person if someone sends you a message while you are still typing this command!

:

The colon is replaced with the nickname of the last person which you haved a addressed with a nick: prefix inside a channel.

#### Reference

=====

JOIN	Join (or create) a channel
LEAVE	Leave a channel
RAW	Send unprocessed string to the server

## 1.9 MicroIRC.guide/JOIN

JOIN

----

Usage: /JOIN channel[,channel[,...]] [key[,key[,...]]]  
Usage: /CHANNEL channel[,channel[,...]] [key[,key[,...]]]

#### DESCRIPTION:

Join a channel on the IRC. If the channel doesn't exists, it is automatically created.

There are two kinds of channels: Channel names starting with an # are global channels and available on all IRC servers which are connected to the net you are currently on. Channels which begin with & are local to the chat server you are connected to.

If a channel requires a special keyword to join, you must submit this after the channel name.

MicroIRC will look for a channel window which isn't currently bound to a channel. If it doesn't find one, a new window will be created and bound to this channel.

#### EXAMPLES:

```
/JOIN #Amigager
      Join channel #AmigaGER
```

```
/JOIN #Amigager,#Amiga
      Join channels #AmigaGER and #Amiga
```

```
/JOIN #Amigawarez coolstuff
      Join channel #Amigawarez with keyword coolstuff.
```

#### RELATED TOPICS:

---

See LEAVE.

## 1.10 MicroIRC.guide/LEAVE

LEAVE  
-----

Usage: /LEAVE [channel[,channel[,...]]

### DESCRIPTION:

Leaves a channel. If you don't give a channel name as a parameter, the channel currently bound to the window in which in the command is entered will be left.

### EXAMPLES:

/LEAVE  
    Leave the channel currently bound to this window.

/LEAVE #Amigawarez  
    Leave channel #Amigawarez.

### RELATED TOPICS:

See JOIN.

## 1.11 MicroIRC.guide/RAW

RAW  
---

Usage: /RAW text

### DESCRIPTION:

Sends text directly to the IRC server without any further processing. Warning: Don't even think about using this command without interior knowledge of the IRC protocol, or you might run into severe trouble. See 'RFC 1459' for a description of the IRC protocol.

### EXAMPLES:

/RAW JOIN #IRC-Heros  
    Send the string JOIN #IRC-Heros directly to the IRC server.

### RELATED TOPICS:

'RFC 1459'.

## 1.14 MicroIRC.guide/ARexx

MicroIRC's ARexx Port

\*\*\*\*\*

Overview

=====

MicroIRC supports a versatile ARexx Port.

Reference

=====

SAY  
    the input string  
GETMYNICK  
ISCONNECTED  
GETSERVERNAME  
USERHOST

Treat something just like it was entered in ↵  
  
Request current nick name  
Check whether connection is established.  
Request current server name  
Query Userhost of a nick

## 1.15 MicroIRC.guide/RX\_SAY

SAY  
---

Usage: SAY TEXT/F

DESCRIPTION:

Treats TEXT just like it has been entered in the string gadget of the current window.

EXAMPLES:

say '/JOIN #Amigager'

RELATED TOPICS:

## 1.16 MicroIRC.guide/RX\_ISCONNECTED

ISCONNECTED  
-----

Usage: ISCONNECTED

DESCRIPTION:

Checks whether a connection is currently established. Returns RC 0 if the link is up, RC 5 otherwise.

EXAMPLES:

ISCONNECTED; say rc

RELATED TOPICS:

## 1.17 MicroIRC.guide/RX\_GETMYNICK

GETMYNICK  
-----

Usage: GETMYNICK

DESCRIPTION:

Returns your current nickname.

EXAMPLES:

GETMYNICK; say result

---

RELATED TOPICS: See RX\_GETSERVERNAME.

## 1.18 MicroIRC.guide/RX\_GETSERVERNAME

GETSERVERNAME

-----

Usage: GETSERVERNAME

DESCRIPTION:

Returns the name of the IRC server you are currently connected to.

EXAMPLES:

GETSERVERNAME; say result

RELATED TOPICS: See RX\_GETMYNICK.

## 1.19 MicroIRC.guide/RX\_USERHOST

USERHOST

-----

Usage: USERHOST NICK/A

DESCRIPTION:

Returns the userhost specification belonging to NICK. AMIRC keeps a internal list of the userhosts of every nick that occurred yet. You can query this database with this command. Note however that it is possible that the userhost isn't in the database yet; this command will not query the server than, but simply return an error.

EXAMPLES:

USERHOST Olli; say result

RELATED TOPICS: See RX\_GETMYNICK.
