# Chapter 1

## ReadMe

### 1.1 main

Welcome to the world of communication and networking!

Every programm in the comm directory can be started directly from this CD so you don't have to copy anything to your hard disk first. Unfortunately, most of them can't be run just by clicking on their icons but they have to be configured properly first. Please read the corresponding documentation for more information about that.

If a program needs an assign to save files there is a simple trick which works under AmogaOS 2.0 and above:

```
C:Assign <required Assign>: <directory on hard disk>
C:Assign <required Assign>: <directory on CD> ADD
```

This works perfectly e.g. for term:

```
C:Assign term: Work:term
C:Assign term: Meeting_Pearls_III:Pearls/comm/Misc/term ADD
```

You can now e.g. create a directoy in Work:term to store your downloads.

You'll find more information about AMosaic, Amiga MircoIRC, TrapDoor, UMS and MultiLink if you click on the corresponding gadget.

There was not enough space on this CD (yes, this happens even with CDs!) so I had to delete some parts of almost every package (e.g. documentation in DVI and PostScript) and store source code in an LZX archives.

Finally I would like to say thanks to all authors who gave me permission to include their work to this CD. And now have fun with this CD! ;-)

Stefan Gybas

### 1.2 amosaic

---

## AMosaic

You'll find a prerelease of AMosaic 2.0 on this CD which now finally supports forms. There are still some bugs left in this version but in my opinion it works better than the older releases.

There is one version for AmiTCP, AS225 and a NoNet version which runs without any network. All these version require AmigaOS 3.0 so I also included AMosaic 1.2 NoNet for AmigaOS 2.0 users (but there are no inlined images on AmigaOS 2.x - sorry). If you click on the Mosaic icons in the root directory of this CD you will probably get the right version for your system.

## 1.3 amirc

### Amiga MicroIRC

First, I wanted to install Grapevine (the IRC client by Brian J. Cerveny) on this CD but unfortunately the author did not give me permission to do so. I thought that there really should be an IRC client on this CD so I asked Oliver Wagner if I may include his client "Amiga MircoIRC" which is still an alpha version. As all basic functions are implemented and working, he agreed. Thanks Olli!

## 1.4 trapdoor

### TrapDoor

I extracted the archives "td\_1\_84.lha", "ts\_1\_7.lha" and "fidonet.lha" from the original distribution into one common directory and included the German TrapDoor documentation by Marc Führer in the docs directory. Furthermore, I applied the patch from 1.84 to 1.85 and added the changes file to the beginning of "Changes-TD".

The file note of each file (which will be restored when you copy a directory to your hard disk using FindPearls) shows the archive the corresponding file was extracted from.

## 1.5 ums

### UMS 11

There is a complete UMS 11 package on this CD with the following programs and tools installed:

- UMS 11.6 public beta (Server 11.31, Library 11.18)
  - ConfUMS 1.4b6
  - ServerControl 1.0
  - UMS-Export 2.8

- UMS-Import 2.4
- addsysname, umsconvert, umscopy, umscopy.v40, umsdelete
- ums.service 11.1, umsd 11.3
- ListManager.rexx 1.20
- GroupContents.rexx 2.0
- MailForwarder.rexx 1.3
- ReadMessage.rexx 2.1
- ReplyDaemon.rexx 2.1
- ShowGroups.rexx 1.4
- UMSEdit.rexx (21.12.94)
- UMSInit.rexx 2.0
- WakeUp.rexx (10.3.95)
- WriteMessage.rexx 2.1
- Bouncer 1.5 / unbounce 1.0 from UMS 10.9
- FixAccess (26.8.93) from UMS 10.9
- GenMail 1.0
- IntuiNews 1.3a
- ReplyWizard 1.4
- SetExpire 1.0
- SetFolder 1.3
- SortINA 1.3
- SUMSTools 2.11
- UFM 1.1
- UMS-FAQ 0.99 (German: ASCII and AmigaGuide)
- UMS-PGP 0.2
- UMS-QWK 1.0d
- UMS-RFC 0.10 with umspop3-Update
- UMSDirStruct 1.0
- UMSFeeder 0.288
- UMSFido 2.0 (30.07.95)
- UMSFix 0.8
- UMSGGroup 2.11
- UMSMailMon 1.3
- UMSMailStat 1.18
- UMSMapsTool 1.4
- UMSMaustausch 3.2 (16\_11\_94)
- UMSWatch 1.2
- UMSZer 2.22

There is no complete documentation for UMS yet, so I have included some config examples in the Doc directory. Please read the file "README" in that directory to find out more about these files.

There is also a demo message base on this CD which can be started by simply clicking on "UMS-Demo".

The file note of each file (which will be restored when you copy a directory to your hard disk using FindPearls) tells you which archive the corresponding file came from.

The complete packages of "flush.library" and "rexxdossupport.library" were moved to Pearls/dev on this CD.

## 1.6mlink

## MultiLink

There are some precompiled UNIX binaries in the Unix directory, so if there is a suitable version for the machine of your Internet provider you just have to unpack and run that version.

As newer version of ncftp (e.g. from AmiTCP 4.0demo) won't run with MLink, I have included version 1.5.6 on this CD. Please use this version as ftp client for MLink.
