The Symbol Font `wasy`

Roland Waldi

Institut für Experimentelle Kernphysik
Universität Karlsruhe
Physikhochhaus, P.O.Box 6980
D-7500 Karlsruhe, Fed. Rep. Germany

Version 2.0 – September 1992

The font `wasy` contains all `lasy` characters, and a lot more symbols. New characters were modified from the `mf` files of the standard TEX fonts, and many were designed from scratch. Metafont sources for 5–10pt and a bold 10pt font are available.

An extension to PLAIN-TEX for using the fonts is included in the file `wasyfont.tex`. This can probably be used in LATEX documents, but a new LATEX format with the bindings already included and with `wasy` replacing the `lasy` font would be the superiour solution. This version includes all `lasy` characters at the proper codes (causing some incompatibilities with version 1 of `wasy`) to make such a procedure easy. The file `wasyfont.2` contains substitutes for some macros of `wasyfont.tex` to be used at installations, that do not support the `wasy` fonts.

A list of characters with their bindings in `wasyfont.tex` follows. Some macros are actually compositions of several characters useful in the given context. Macros using symbols which are already available from standard TEX fonts are also included; these are marked with *.

integrals (text style)

`$\varint_a^b f(x)dx`	$\int_a^b f(x)dx$	`$\iint_a^b f(x)dx`	$\iint_a^b f(x)dx$
`$\iiint_a^b f(x)dx`	$\iiint_a^b f(x)dx$	`$\varoint_a^b f(x)dx`	$\oint_a^b f(x)dx$
`$\oiint_a^b f(x)dx`	$\oiint_a^b f(x)dx$		

integrals (display style)

$$\int \iint \iiint \oint \oiint$$

With the control sequence `\newpropto` you can change the proportional sign to the thin `wasy` symbol ($\propto$), which is more distinct from alpha (α) then the default symbol ($\propto$).

With the control sequence `\newint` you can change the TEX integrals from $\int, \oint$ to the vertical ones $\int, \oint$, in display:

$$\int_a^b \to \int_a^b, \qquad \oint_C \to \oint_C$$

There are also a few letters in roman style added (although these and some symbols as ʊ, ‰ should be in a separate font, to be created in different styles like italic, sans serif etc. – the `wasychr.mf` source is prepared for that.

`\thorn`	þ	`\Thorn`	Þ
`\dh`	ð	`\Dh`*	Đ
`\inve`	ə	`\openo`	ɔ

Changes since version 1.0

version 1.1:

`\varangle` has been centered at the math axis

version 2.0:

new: letters Þ,þ,ð,ə,ɔ,℧

new astrological and zodiacal symbols

new symbols permil, cent, ataribox

now the full set of `lasy` is included; for this purpose 9 characters (☺, ☻, ☹, ☼, ♄, ♄, ♁, ☿, ♇) have **changed code**!

`wasyb10` font for bold math added
