

The Symbol Font `wasy`

Roland Waldi

Institut für Experimentelle Kernphysik

Universität Karlsruhe

Physikhochhaus, P.O.Box 6980

D-7500 Karlsruhe, Fed. Rep. Germany

Version 2.0 – September 1992

The font `wasy` contains all `lasy` characters, and a lot more symbols. New characters were modified from the `mf` files of the standard `TeX` fonts, and many were designed from scratch. Metafont sources for 5–10pt and a bold 10pt font are available.

An extension to PLAIN-`TeX` for using the fonts is included in the file `wasyfont.tex`. This can probably be used in `LaTeX` documents, but a new `LaTeX` format with the bindings already included and with `wasy` replacing the `lasy` font would be the superiour solution. This version includes all `lasy` characters at the proper codes (causing some incompatibilities with version 1 of `wasy`) to make such a procedure easy. The file `wasyfont.2` contains substitutes for some macros of `wasyfont.tex` to be used at installations, that do not support the `wasy` fonts.

A list of characters with their bindings in `wasyfont.tex` follows. Some macros are actually compositions of several characters useful in the given context. Macros using symbols which are already available from standard `TeX` fonts are also included; these are marked with `*`.

<code>\$\LHD b</code>	$a \blacktriangleleft b$	<code>\$\RHD b</code>	$a \blacktriangleright b$
<code>\$\sqsubset b</code>	$a \sqsubset b$	<code>\$\sqsupset b</code>	$a \sqsupset b$
<code>\$\sqsubseteq* b</code>	$a \sqsubseteq b$	<code>\$\sqsupseteq* b</code>	$a \sqsupseteq b$
<code>\$\propto* b</code>	$a \propto b$	<code>\$\varpropto b</code>	$a \propto b$
<code>\$\leadsto b</code>	$a \leadsto b$		

integrals (text style)

<code>\$\varint_a^b f(x)dx</code>	$\int_a^b f(x)dx$	<code>\$\iint_a^b f(x)dx</code>	$\iint_a^b f(x)dx$
<code>\$\iiint_a^b f(x)dx</code>	$\iiint_a^b f(x)dx$	<code>\$\varoint_a^b f(x)dx</code>	$\oint_a^b f(x)dx$
<code>\$\oiint_a^b f(x)dx</code>	$\oiint_a^b f(x)dx$		

integrals (display style)

$$\int \iint \iiint \oint \oiint$$

With the control sequence `\newint` you can change the T_EX integrals from \int, \oint to the vertical ones \int, \oint , in display:

$$\int_a^b \rightarrow \int_a^b, \quad \oint_C \rightarrow \oint_C$$

There are also a few letters in roman style added (although these and some symbols as \mathfrak{U} , ‰ should be in a separate font, to be created in different styles like italic, sans serif etc. – the `wasychr.mf` source is prepared for that.

<code>\thorn</code>	þ	<code>\Thorn</code>	Þ
<code>\dh</code>	ð	<code>\Dh*</code>	Ð
<code>\inve</code>	ə	<code>\openo</code>	ɔ

Changes since version 1.0

version 1.1:

`\varangle` has been centered at the math axis

version 2.0:

new: letters $\mathbb{P}, \mathfrak{p}, \delta, \mathfrak{a}, \mathfrak{U}$

new astrological and zodiacal symbols

new symbols permil, cent, ataribox

now the full set of `lasy` is included; for this purpose 9 characters (\odot , \bullet , \ominus , ♂ , ♂ , ♂ , ♂ , ♂ , ♂) have **changed code!**

`wasyb10` font for bold math added
