- The MS Word TrueType™ Printer Init included on the Program disk fixes a problem with printing TrueType™ fonts to QuickDraw-based printers (i.e., the StyleWriter™ and the Personal LaserWriter LS™).

  To use this init, place it in your System Folder and restart your Macintosh. The MS Word TrueType™ Printer Init icon is displayed at the bottom of your monitor. To stop the init from loading, remove it from your System Folder.

  If you are using the StyleWriter™ or the Personal LaserWriter LS™, turn on Fractional Widths in the Page Setup dialog to get correct tab alignments.
