

HexCalc is a desktop programmers calculator for the Psion 5.

It is designed to replace the Hexadecimal functions that were dropped from the Series 3 versions of Calc.

V1.02 supports Decimal and Hexidecimal number formats and provides a single memory option.

HexCalc is Freeware. It may be copied and distributed freely as long as no modifications are made. No warranties are expressed or implied.

Any comments or suggestions to vince@viosys.demon.co.uk

To install

Create a folder called HexCalc (capitalisation is important !), under your System\Apps directory and copy all the files into it.
