## Introduction

Shortcut is a freeware utility for EPOC32 that enables you to make Windows 95 shortcuts to EPOC32 applications, documents and even web sites.

Features:-

- Create a shortcut to any EPOC32 application. Double click the shortcut and the document is loaded, or brought to the foreground if it is already loaded.
- Create a shortcut to any web site using the EPOC32 Web browser.
- Create a shortcut to an OPL module file (an OPO file)
- Fully Compatible with it's own files. You can create shortcuts to shortcuts!!
- Integrates with the EPOC32 new file dialog.

## What's New in this release?

Version 1.5 of Shortcut features the following enhancements from V1.0

**Support for all EPOC32 file formats-** You can now create shortcuts for OPL and C++ application files. You can also create shortcuts to OPO files.

**Support for web sites-** Create shortcuts to web addresses. Double click a shortcut and the web site is launched in the browser.

In addition, Beta 3 supports long filename and corrects some issues with OPL editor files.

## Installation

Installing Shortcut couldn't be easier. Simply create a folder called Shortcut in your <DRIVE>:\system\apps folder and copy the Shortcut.APP, Shortcut.lib and Shortcut.AIF files into it.

Next copy the SYSRAM1.OPX file into your c:\system\opx folder.

Finally copy the ps.opo and ps.mbm files into a folder called c:\system\opl. These files may already exist if you have other Palmscape installed.

## Using Shortcut

You can start shortcut from the Extras bar or by using the new file option in the System screen.

To create a shortcut you need to specify a filename and the type of shortcut. You can select from an application/file or a web site address.

If you select application or file, then the next screen requires you to navigate to the chosen file. If you select web site, then enter a URL address, with or without the http:// prefix.
