A lush tropical jungle scene with a waterfall and dense foliage. The image is dark and moody, with sunlight filtering through the trees. In the foreground, there are large rocks and a wooden structure made of bamboo or similar material. The waterfall is visible in the background, cascading down a rocky ledge.

# 1 Welcome and Registration

## 1.1 About PitRacer

PitRacer is an invigorating romp through a hellish jungle of monsters, assassins, and natural perils. Your goal is to race your fellow opponents against the clock to the Finish Line.

Included in this archive are the following packages:

- PitRacer.prc

This is the software package that you need to install on your PalmPilot.

- PitRacer.pdf

This is the users' manual for PitRacer. You are reading it right now.

- PitRacer.txt

This is a text only format of the users' manual. If at all possible, use the pdf version of the manual as it has layout and graphics that cannot be included in the text version. The pdf version of the manual is viewed using Adobe® Acrobat Reader®. This can be obtained free of charge at [www.adobe.com](http://www.adobe.com).

## 1.2 System Requirements

PitRacer is designed to work on both the Palm III and Professional units. Throughout this manual, PalmPilot is used to refer to either of these units.

## 1.3 Registering PitRacer

PitRacer is Shareware, and costs \$10.00.

The PitRacer Demo will work for a 30 day trial period. At the end of the 30 Days, it will stop working. To avert this tragedy, you will need to get in touch with Stand Alone to register your software. You can register with us by several different methods.

You will need to include the following information, no matter how you choose to register. Most importantly, you need to include your name EXACTLY as it is entered in your PalmPilot, including spaces. We use this to generate your password, so it must be precise. You will need to specify which programs you wish to register, and include payment for each of them. We accept Visa, Mastercard, and American Express. If you are using normal mail, you can send us a check as well.

Make sure to include your card number, the expiration date, and what type of card you are using. You also need to give us a way to get in touch with you. Email is the preferred way, followed by your address and phone number. An Email address is not strictly necessary, but it will result in much faster service.

For instant gratification, register by phone, and pay using Visa or Mastercard. To do so, call (773) 477-2492 and we will give you a password right over the phone.

Alternatively, you can send us a check to the address below.

You can also Email us. Just Email us the relevant information, and we'll send you a code. If you are registering through Compuserve, use, GO SWREG.

Once you register, you will receive a password from us. You can install this password one of two ways. There is an option to Enter Password via the Enter Password option in the menu. Tap on it to bring up a screen that has a space to enter the password.

#### **1.4 Contacting Stand Alone Inc.**

There are several ways to get in touch with us here at Stand Alone, Inc. Email is the preferred form of communication, but whatever works for you is fine. If you have any questions, comments, suggestions or compliments, please don't hesitate to contact us through any of the methods listed below.

##### **1.4.1 Business Hours**

Stand Alone is open from 9 AM to 7 PM Monday thru Thursday, 9 AM to 6 PM on Friday, and 10 AM to 4 PM Saturday. We are closed on Sunday. These times are CST and GMT -5.

##### **1.4.2 Email**

internet: info@standalone.com  
AOL: Std Alone  
CompuServe: 76342,3057

##### **1.4.3 Phone**

Voice: (773) 477-2492  
Fax: (773) 477-2579

##### **1.4.4 Regular Mail**

Stand Alone  
3171 N. Hudson, Suite 1  
Chicago IL, 60657  
USA

1.4.5 World Wide Web  
<http://www.standalone.com>

## 1.5 Reporting Bugs

If you find a bug in our software, it would be helpful if you reported the bug to us. To report a bug, please Email us with Bug Report Request in the subject line. In the Email, include the following information:

- What type of PalmPilot you are using (i.e. Personal)
- The software name and version number (i.e. PitRacer 1.0)
- The error number
- A brief description of how we can recreate the error
- Your name and Email address so we can contact you when the bug is fixed

When reporting bugs, it is best to Email us, rather than calling, so that the programmers have a written record of the information they need to solve the problem. As soon as we receive your Email, the programmer will examine the problem, and fix it.. Because our programmers are busy creating software, it can take a while for them to reply, but they will release a new version of the software that fixes the bug as soon as they can.

# WELCOME to the JUNGLE

## PitRacer for Palm OS

*PitRacer* is an adrenaline-charged race for survival against both your fellow racers and the formidable antagonists that haunt your trek through a nightmarish Jungle inferno.

### **Prepare to be Hunted...**

*You are a fledgling explorer on expedition in a perilous South American jungle plagued with ferocious beasts, treacherous paths, and well-placed booby traps. You have your fellow team for support and guidance, so there's nothing to fear, right? Wrong. The mischievous but deadly powers of the jungle make you and your party the pawns in their twisted game. Suddenly, you find yourself competing for survival against your comrades, with only a stopwatch and your wits to aid you. You are given one obvious but difficult task: to navigate this dangerous, steaming inferno before the allotted time runs out. If you do not succeed, you are condemned to eternal racing, a fate worse than death. All you can do is keep running, and hope that in time your wisdom will win you a one-way ticket out of this Dante-esque hierarchy of torments...*

### **Ready, Set,...Run For Your Life!**

You are allowed to start any levels at any time, though once the clock runs out, you must start anew, attempt to beat your last score, and complete the entire race in the same amount of time. If not, you are condemned to keep starting over until you reach the Finish line.

Note: Your fellow racers serve mainly to confuse and distract you; passing them enables you to reach obstacles before they do, and thus, play a more challenging game. Also, the closer you are to the finish line when the race starts, the less likely you are to run out of time...

One more thing: There are 9 gruelling levels *besides* the preliminary one. So familiarize yourself with the controls, take a deep breath, start at the Intro course, and keep an eye out for bullet-belching monsters, sneaky snipers, exploding mines, and towering stone blockades. And remember, The Clock is your worst enemy....

Good Luck!

### The Moment of Truth

Your goal in PitRacer is to reach the finish line with as few delays as possible, thus beating the clock and winning the race. However, these “delays” are far from easy to avoid...

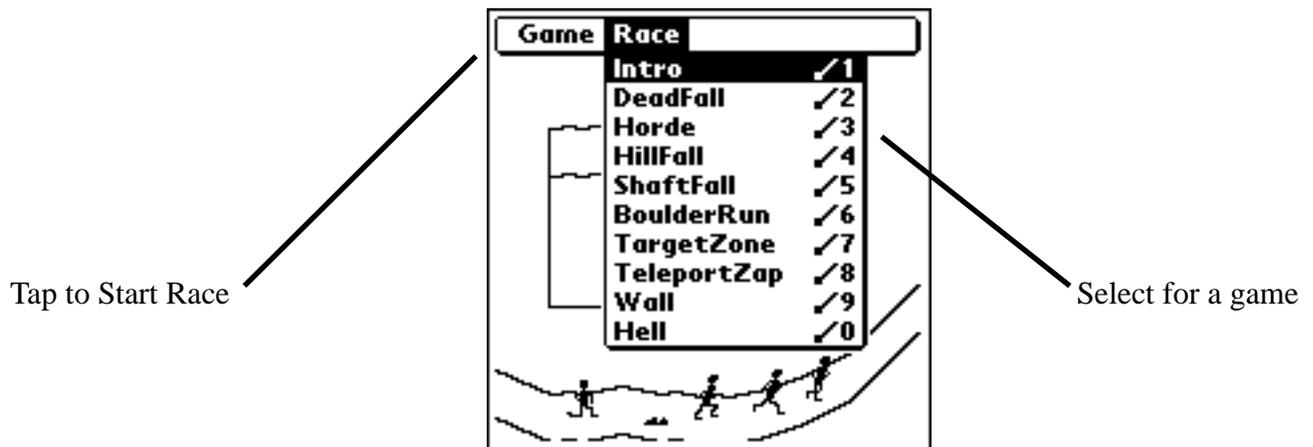

Use the control buttons to steer your racer through the chaotic jungle, taking care to dodge the obstacles that litter his path to the Finish Line. You may walk, run, leap, and use your own discretion to beat the clock without severely damaging your racer. Of course, if you would like to run through the race as quickly as possible, go right ahead, but be warned that each fall loses your racer precious seconds to recovery... So, the surest way to win is to keep one eye on the clock, and the other on both the other racers (for hints on how to dodge the obstacles) and your antagonists.

### Starting a New Race

To start a fresh game, tap the Menu silkscreen button and select Game. From the Game menu, select Start Race. Or, use the Graffiti Command-S.

### Choosing a Race

Pit Racer presents you with 10 different races, ranging from Intro to Hell. To select a race, tap on the Menu silkscreen button and select Race. Then, tap whichever race you desire. Or, simply use the Graffiti commands.

*Note: The races are in no particular order of difficulty, though Intro begins the demo and has the fewest obstacles. Likewise, Hell is indeed the most complicated. As far as levels 2-9 are concerned, take your pick of obstacles!*

*Remember, once you lose a game and tap the Menu button for Game, Start Race, you will begin a new game at which ever level you were last playing. Unless you go to Race, which automatically starts a new game at the level you select.*

### Setting the Controls

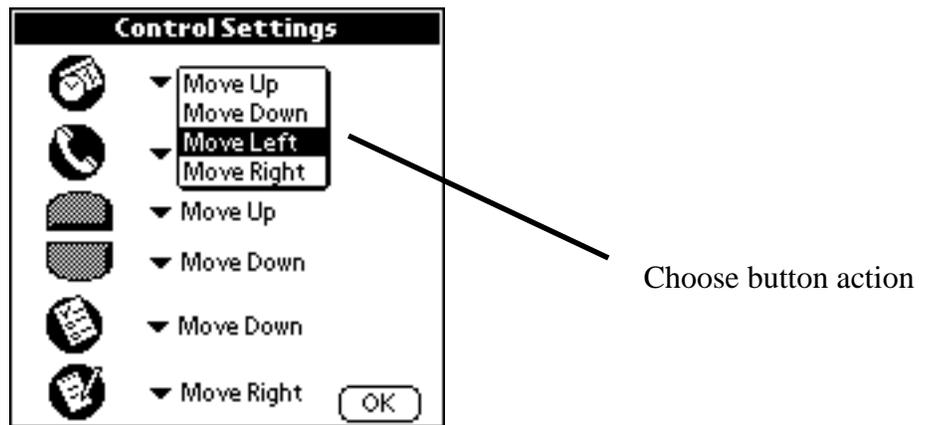

In PitRacer, being able to maneuver your controls as efficiently as possible is essential.

The controls for moving your racer are set to the buttons at the base of your PalmOS device.

You may either set the controls yourself or stick to the default setting already placed on the Pilot.

Use whichever method is more comfortable for you; but keep in mind that constant changes to the controls might prove quite confusing.

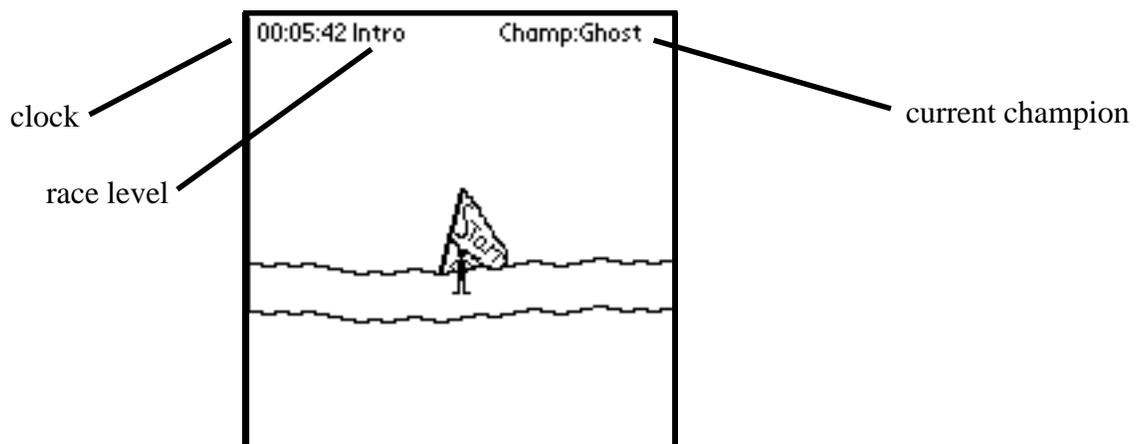

If you would prefer to customize the controls, you may tap the Menu silkscreen button and choose the Controls option. The Controls screen shows which direction your racer will move when specific buttons are pressed. By selecting the picker arrow next to a button, you are able to set the direction your racer will move when it is pressed.

### Scoring

When you start the demo, you will notice the word “Ghost” in the upper right corner of the screen.

This name appears until you win the game and are then allowed to enter your own name in its place.

### The Clock of Doom

That infamous timeclock is located in the Upper lefthand corner of the screen. The minutes and seconds tick away during the race, the level of which is displayed right next to these numbers. When the race gets down to the last 10 seconds, however, do not be alarmed by the bold numbers that appear on the center of the screen, warning you your time is almost up.

## Survival of the Fittest

### *Playing Instructions*

Important rules of thumb for PitRacer are to become familiar with the controls, to properly move your racer, and above all to watch your time.

As far as the **controls** are concerned, you will notice that pressing the **Up** button moves your racer from a kneeling or fallen to a standing position, with his hands on his hips...

Pressing either the **left** or **right** buttons cause him to begin **walking**, and pressing either button

a 2nd time makes him **run**. 

**If you are about to run into a weight** or some other such obstacle, pressing the opposite direction button than the one you are already headed in causes your racer to **pause** in his tracks.

**To dodge boulders or mines**, you must press the **Up** button to jump, but pinpointing the right time is often tricky. There is often a **delay** from the execution of the command and its manifestation. Jumping either too soon or too late turns you into a pancake... Of course, you will still be able to get up, but this takes a substantial amount of time and manipulation of the controls, which will slow you down considerably.

**You should not need to keep your hands on the buttons** throughout the entire race, but at times you may notice your racer's steps slowing down. This is simply a result of the **graphics** conflicting with your command. At these times, you will need to press the buttons just to ensure that the command is getting through.

To prevent confusion about which stick figure is yours, remember that the **screen** follows your racer only. If you are in doubt, make him jump or change his direction to identify him in the throng of racers. If you choose incorrectly, you will end up waiting a very long time until you realize your player is still down or kneeling.

*You may also notice that a **running leap**  often speeds your progress, or that burnt-out mines will not harm you. Part of the challenge of PitRacer is discovering such tricks...*

## The Antagonists

### *Not Your Run-of-the-Mill Lions, Tigers, and Bears*

#### Beasts

These belching monsters continually blow bullets that slow your racer down.

#### Snipers

Assassins who hide at various stages of the race to shoot at you. Their bullets will knock you down, unless you leap over or roll under them.

#### Executioners

These cruel tormentors greet you as you start the level DeadFall. They chase you and do considerable damage with their huge battle axes, unless you are deft enough to roll under them.

#### Archers

Fairly weak opponents who do not fire at you nearly as often as the beasts. But, do not run blindly into their arrows either. Jumping or ducking is your best bet.

#### Weights

These unfair opponents cannot be passed, and if you are not particularly adept at moving out of the way when they choose to fall, your racer becomes road pizza for a considerable amount of time. Then, you must figure out how to revive him and pass under these bone-crushing bullies safely, without losing even more time

#### Walls and Boulders

Non-living objects that prove to be as frustrating as the live antagonists! You cannot run through them, nor can you leap over or around the walls. And, as in real life, when you strike either (or they strike you!), you fall down.  You may, however, leap  over the boulders.

#### Mines

Flashing boxes that explode viciously  and severely hinder your racer if he fails to leap over them.     However, once triggered, they are harmless,

Dead mines are represented by small black flames 

#### Portals

These are your life-savers...Who knows why your captors put them there-mercy?

Portals enable you to escape your current dilemma, especially walls that cannot be passed.

There are 2 types of Portals, either the little flashing dots in the air, 

or the flashing flame pits on the ground  (not to be confused with burnt-out mines)

To reach the first kind, you must jump up and hit one. To utilize the second kind, you need only walk

right into them.  But be cautious; a portal does not always transport you to a better place!

## Entering the Pit

### *A Step-by-Step Analysis of the Intro Level*

Even though the purpose of Pit Racer is to discover how to defeat challenges yourself, for those of you relatively new to the art of electronic jungle survival, I have provided a detailed description of the Intro/ Demo course.

After this, you're on your own...

*Note: You have 6 minutes to complete this level.* 

1. Move your racer from his kneeling position at the Start flag.

*Hint: the Up arrow*  *will accomplish this feat.*

Note: Getting your racer up and moving as soon as possible  makes for a more interesting game for you, and also makes things less confusing than ending up jumbled with the other identical racers... 

2. Remember that pressing the L or R buttons only move your racer to the walking position. To save time, you want to press the buttons a second time to switch to running    mode.

3. Bypass the 1-ton weights,  taking care not to be too eager and run into them before they have been safely raised or lowered from your path. 

4. Leap off the cliffs (proving that in Pit Racer, the earth is indeed flat!) and move as quickly as possible out of the time-sucking free fall mode transports you down to the next section.

5. Try your luck at dodging or leaping over the mines and flying bullets. Do not be frustrated if you do not succeed at first...     No one ever said survival was easy!
