

This Document contains notes for using the CASRES.DLL included with Casino BlackJack for Windows V.2.1s.

The CASRES.DLL must reside in the current directory, a directory contained in your path statement, or the directory where Windows is installed.

Video Poker V.1.0 or V.1.0s, developed by Pyramid Software Development, also uses the same DLL. Should you have both programs, you can delete one of the DLL files. But, make sure both programs will be able to access the CASRES.DLL.

This can be done by putting both programs in the same directory, By setting the working directory of the Program Manager's Program Item Property for the games to the directory containing the dll, or by simply putting the file in your windows directory.
