Chapter 1

003a05a8-0

1.1 AddFormatting.rexx

AddFormatting.rexx

A macro for adding formatting to Final Writer bibliographies, endnotes, and tables of illustrations.

Final Writer does not allow the insertion of formatting (italics, underlining, or bold) in its automatically-created bibliography, endnote, and table of illustrations sections. As a bibliography without italics or underlining is unacceptable for any sort of professional work, I wrote a quick and dirty macro to allow permanent formatting information to be included with these sections.

```
~Installation~  
~~~~~Use~~~~~

```

1.2 Installation

INSTALLATION

Copy AddFormatting.rexx to FinalWriter/FWMacros (or where ever you keep your Final Writer macros). Follow the instructions on page 3-29 of the Final Writer 4 manual for adding the macro to the user menu.

1.3 Use

USE

See the Final Writer documentation for instructions on how to create a Table of Illustrations (page 10-13), Endnotes (page 10-15), and Bibliographies (page 10-19). Although the example given below is for endnotes, the same procedure applies for the bibliography and the table of illustrations.

When you insert (or edit) an endnote, enter the following character sequences immediately before and immediately after the text to be formatted:

i to start/end italics
u to start/end underlining
b to start/end bold

Multiple formats may be applied to a single word/phrase, but the character sequences must be as above. For example,

_b_Phi Delta Kappan_b_

will result in the phrase "Phi Delta Kappan" being bolded, while

_b_i_Phi Delta Kappan_i__b_

will result in that same phrase being both bolded and italicized.

Create and go to the Endnote section, then run the AddFormatting.rexx macro. The "Find Text" requestor will appear and the marked text will be formatted. After several screen flashes, the Find requestor will display "Done Formatting." Close the requestor and be glad you didn't have to format all that by hand each time you generated the section.
