

Welcome to HelpColr 2.0!

To install HelpColr 2.0...

- 1) Create a directory on your hard drive.
- 2) Copy HELPCOLR.EXE and HELPCOLR.HLP into the directory that you just created.
- 3) Make sure that you have VBRUN300.DLL in your <drive>:\WINDOWS\SYSTEM directory.\*
- 4) Create a program item in your favorite group for HelpColr 2.0

\*If you do not have a copy of VBRUN300.DLL, you may download it off of your favorite BBS, or off of Ziffnet in the ZNT:Tips Lib 10 section.

What's New...

- HelpColr 2.0 now allows you to set the colors for the Multimedia Viewer. You can set all of the color settings just as you can for the WinHelp engine.
- As always, feel free to drop me comments and suggestions.

Description...

HelpColr 2.0 supports the Windows 3.x Operating Systems. This includes Windows, Windows for Workgroups, Windows NT and Windows for Pen Computing.

The HelpColr 2.0 program allows you to set the colors used by the Windows Help Engine and also the Multimedia Viewer. This includes, JumpColor, PopupColor, MacroColor, IFJumpColor, and IFPopupColor. It provides you with the ability to immediately see the effects of your changes by providing to you a Sample Help File window. You may save your changes by choosing OK or simply exit by choosing Cancel.

Thanks for giving HelpColr 2.0 a try, and don't hesitate to send me your comments, suggestions, bugs, etc.

Thanks for your time and support!
