Welcome to
Data Rescue II

a data recovery product by
Prosoft Engineering, Inc.

Prosoft Engineering's Data Rescue is an easy-to-use utility to help you recover files and folders from crashed or corrupted hard drives, floppy drives, or removable cartridges. Recovered data is saved to another volume, leaving the original drive untouched.

Data Rescue's strategy for finding lost files is different from and better than the strategies used by other tools. Not only will it find your data in situations where the other tools fail, but also it will recover them in a much better condition, restoring icons, dates and even folder hierarchy in many cases.

Data Rescue focuses on data recovery as opposed to hard drive repair. Your entire hard drive is examined for file content, ignoring the corrupt directory entries.   This is one of the reasons that Data Rescue is more successful than "repair" utilities on the market. The data on the drive is painstakingly evaluated and files are meticulously re-assembled and stored in a safe location. Either with intense manual evaluation, or with the help of powerful software tools, this is the process that data recovery professionals routinely use to restore their client's data.

Why? Because this is the only reliable way to safely recover your data.
