DivX 6 for Mac

Version 6.0.0
Read Me updated on 11-22- 2005

Table of Contents

1. Introduction

Welcome to DivX 6 for Mac, bringing you the most powerful DivX video compression and playback technology to date.   With DivX you can view current DivX movies as well as create studio-quality DivX movies more easily than ever.

Use the DivX Converter with drag-n-drop simplicity to convert virtually any QuickTime movie to Divx - even batch encode multiple movies in one fell swoop.   DivX even integrates with many popular video editing and movie creation tools allowing you to work with the products you prefer and still take advantage of DivX's compression technology and popularity by outputting your creation as DivX movies.

Furthermore, all DivX content you create is guaranteed to playback on the full range of DivX Certified DVD players and other consumer electronic devices.

2. Files in this Installation
