```
ilbm.datatype()
```

1.2 ilbm.datatype/ilbm.datatype

NAME

`ilbm.datatype` -- data type for ILBM pictures.

FUNCTION

The ILBM data type, a sub-class of the `picture.datatype`, is used to load ILBM IFF picture files.

METHODS

`OM_NEW` -- Create a new picture object from an ILBM IFF. The source may be either a file or the clipboard.

SEE ALSO

`picture.datatype`.
