

HyperLaunch v1.5

This new version of HyperLaunch includes a bunch of new capabilities, including adding buttons easily. Feel free to use, experiment, distribute, and modify HyperLaunch. PLEASE DO NOT MODIFY THE "About..." SCREEN!

If you like HyperLaunch, and would like to receive the next version when it becomes available, send \$7, or a disk and SASE, to me at the below address. If you're content to DL newer versions from the service of your choice, then just send me a letter. Your comments will make this a better stack! People who write in get notified of new versions, new stacks, and get preferential treatment, like passwords for the early (**AND encrypted**) uploaded versions of new stuff.

Thanks for your support. Now I've got to get back to my machine and get Hyper!
