1.2 Disclaimer

Disclaimer

JpegLibraryPrefs is supposed to be a preferences program for jpeg.library. Even though every effort has been made to make JpegLibraryPrefs as stable and functional as possible, I cannot rule out the possibility that JpegLibraryPrefs may have bugs that have side effects (possibly harmful) on your system.

I hereby reject any liability or responsibility for these or any other consequences from the use of JpegLibraryPrefs whatsoever. This includes, but is not limited to, damage to your equipment, to your data, personal injuries, financial loss or any other kinds of side effects.

JpegLibraryPrefs is provided as-is. This means I do not guarantee that JpegLibraryPrefs is fit for any specific purpose and I do not guarantee any bug fixes, updates or help during error recovery.

1.3 Distribution

Distribution

Distribution

JpegLibraryPrefs should be distributed at no charge to the end user. It may be included on CDs such as Aminet. The JpegLibraryPrefs executable and documentation is shareware, however payment is not required for its use.

For ANY COMMERCIAL APPLICATION using JpegLibraryPrefs, contact the [author](#) for further information concerning distribution.

1.5 How to use it

JpegLibraryPrefs is a preferences program for jpeg.library.

After running JpegLibraryPrefs, you can use the GUI to control specific features of jpeg.library.

The slider adjusts how often the progress callback hooks are called during image decompression.

When set to the extreme left, the indicator says 'App' which means that the callbacks are controlled by the application.

When set to the extreme right, the indicator says 'Never' which means that the callbacks are not called.

The percentage indicated otherwise indicates how often for the entire image decompress the callbacks are called. For example if it is 20%, it will use the callbacks 5 times during the decompression.

1.6 Compiler

Compiler

JpegLibraryPrefs was written and compiled using CED V3.5 and SAS/C 6.58 on an Amiga 4000/060. Cyberguard was used to detect/correct programming errors.
