### 1.2 Disclaimer

Disclaimer

ImageIOLibraryPrefs is supposed to be a preferences program for imageio.library. Even though every effort has been made to make ImageIOLibraryPrefs as stable and functional as possible, I cannot rule out the possibility that ImageIOLibraryPrefs may have bugs that have side effects (possibly harmful) on your system.

I hereby reject any liability or responsibility for these or any other consequences from the use of ImageIOLibraryPrefs whatsoever. This includes, but is not limited to, damage to your equipment, to your data, personal injuries, financial loss or any other kinds of side effects.

---

ImageIOLibraryPrefs is provided as-is. This means I do not guarantee that ImageIOLibraryPrefs is fit for any specific purpose and I do not guarantee any bug fixes, updates or help during error recovery.

## 1.3 Distribution

Distribution

Distribution

ImageIOLibraryPrefs should be distributed at no charge to the end user. It may be included on CDs such as Aminet. The ImageIOLibraryPrefs executable and documentation is shareware, however payment is not required for its use.

For ANY COMMERCIAL APPLICATION using ImageIOLibraryPrefs, contact the [author](#) for further information concerning distribution.

## 1.5 How to use it

ImageIOLibraryPrefs is a preferences program for imageio.library.

After running ImageIOLibraryPrefs, you can use the GUI to control specific features of imageio.library.

The Temporary Storage group allows you to select where imageio.library will store temporary files. The decode directory is where temporary files for image decoding are stored (uuencoded and base64 encoded). The memory stream directory is where temporary files used during memory stream processing are stored. If you are unsure as to what to set these to, leave the defaults turned on (the default directory is T:).

The option "Allow decoding" permits imageio.library to decode single part uuencoded files or base64 encoded files such as those retrieved from an NNTP news server and treat them as normal files. Loading times are slightly longer for files that need to be decoded as the files must be decoded before being loaded.

Using the remaining check boxes, you can dis/enable the internal loading

---

options of imageio.library. For example if you have a PPC or prefer to load jpeg files with a datatype, you can disable the internal jpeg.library support of imageio.library. This means that instead of using jpeg.library to load jpeg files, imageio.library will fall through to datatype support to load that file format. If you turn off all the internal loading options, imageio.library can not load any images.

## 1.6 Compiler

Compiler

ImageIOLibraryPrefs was written and compiled using CED V3.5 and SAS/C 6.58 on an Amiga 4000/060. Cyberguard was used to detect/correct programming errors.

## 1.8 History

History

V2.1

Updated email addresses and home page links.

V2.0

Added standard prefs menus.

Added support for the new memory stream feature of imageio.library.

V1.0

Initial release.
