

The Macintosh Blob Manager

A Programmer's Guide

**Document revision 2.03
21 February 1994**

Table of Contents

1. About the Blob Manager
 - 1.1 Distribution Information
2. Overview of Blob Behavior
 - 2.1 Blob Anatomy
 - 2.2 Blob Transactions
 - 2.3 Display Attributes: Hidden, Dimmed and Frozen Blobs
 - 2.4 User-Initiated Transactions: The `BlobClick()` Routine
 - 2.5 Program-Initiated Transactions
 - 2.6 Quiet Blobs and Blob Matching
 - 2.7 Visual Feedback
 - 2.8 Distinction Between Donor and Receptor Blobs
3. Using the Blob Manager
 - 3.1 General Overview
 - 3.2 Blob Manager Data Types
 - 3.3 Creating a Blob Set
 - 3.3.1 Picture Blob Creation
 - 3.3.2 Procedure Blob Creation
 - 3.4 Blob Drawing
 - 3.5 Blob Hit-testing, Tracking, Dragging and Moving
 - 3.6 Blob Manager State Information and Multiple Blob Scenarios
 - 3.7 Miscellaneous Topics
 - 3.7.1 Secondary Data Structures
 - 3.7.2 `BlobClick()` Revisited: The Advisory Filter
 - 3.7.3 “Donorless” Scenarios
 - 3.7.4 Multiple Drag Regions
 - 3.7.5 Customizing the Blob Manager
 - 3.7.5.1 Click Filter
 - 3.7.5.2 Quiet Proc/Rand Proc
4. Blob Manager Routines
 - 4.1 Initialization
 - 4.2 Blob Allocation and Disposal
 - 4.3 Blob Record Field Access
 - 4.4 Picture Blob Creation and Region Assignment
 - 4.5 Procedure Blob Creation and Region Assignment
 - 4.6 Low-level Blob Region Assignment
 - 4.7 Graphic Operations on Blobs
 - 4.8 Blob Transactions
 - 4.8.1 Low-Level Transaction Routines
 - 4.8.2 High-Level Transaction Routines
 - 4.9 Blob Movement
 - 4.10 Blob Hit Testing
 - 4.11 Blob Tracking and Dragging
 - 4.12 Blob Match Testing and Match Result Display
 - 4.13 Blob Condition Testing
 - 4.14 Miscellaneous Routines
5. Troubleshooting
6. Possible Future Changes
