

This ProViewer, included on the ProView CD-ROM and available on our web site, is a great example of how professional photographer, Gabe Palacio, creates a digital interactive portfolio.

"Hot spots" are used with a customized set of buttons to link pages together and run the portfolio as a slide show. Every page combines text with the photographs as a caption describing the image being viewed.

The final page has 13 "thumbnail" pictures that link each image to its respective page. The portfolio concludes with a brief biography and then incorporates a final button with sound attached to return to the first page.
