

# NetBatch

*The batch download utility for the Macintosh.*

## **Setup**

NetBatch has a set of questions that it will ask you at startup. Just answer the questions, and then you will be ready to use NetBatch.

## **Use**

Copy and paste an URL into the text field, or type it in manually. This operation is made easier by Netscape's popup menus. Just hold down the mouse button over an URL, and hit "Copy this link location," then paste it into Netbatch.

When you have entered the URL, either hit RETURN, or press "ADD."

When you are ready to download press "Go"

## **AutoFiles 2**

Please check out the support site at <http://www.intensemedia.home.ml.org> for more info about this feature.

Normally, one would download an "Autofiles 2 Issue" each month.
