

Master Headers and Footers

In previous versions the number of Master Headers and Footers that could be stored was fixed. Now, Master Headers and Footers are treated as documents, that is, they show up in the document index, and can be imported and exported as text files. If a Master Header has been saved previously, its location is saved as a document path.

Each Master Header or Footer can be renamed by clicking on its title bar, its path can be set or cleared by clicking on the pathname located in the lower left of the Master Header or Footer window.
