

MacX 2.0

Features

Compatibility

- Support for X11R6.1
- Access to all X Window client applications, including OSF/Motif, OpenLook, and DECWindows
- Seamless integration between Mac OS and X Window applications
- Extensive font capabilities including font server, XLFD, and R6 font support
- Support for login via xdm/xdmcp or rsh/rexec
- Supports both Classic and Open Transport networking

High performance

- Accelerated for PowerPC processor-based systems
- Industry-standard Backing Store/Save Under capabilities
- Open Transport ready

Ease of use

- One-button installation
- Full support for Mac OS user-interface features
- Ability to copy and paste text and PICT files between X Window and Mac OS applications
- Customizable pull-down menus
- Support for multiple monitors

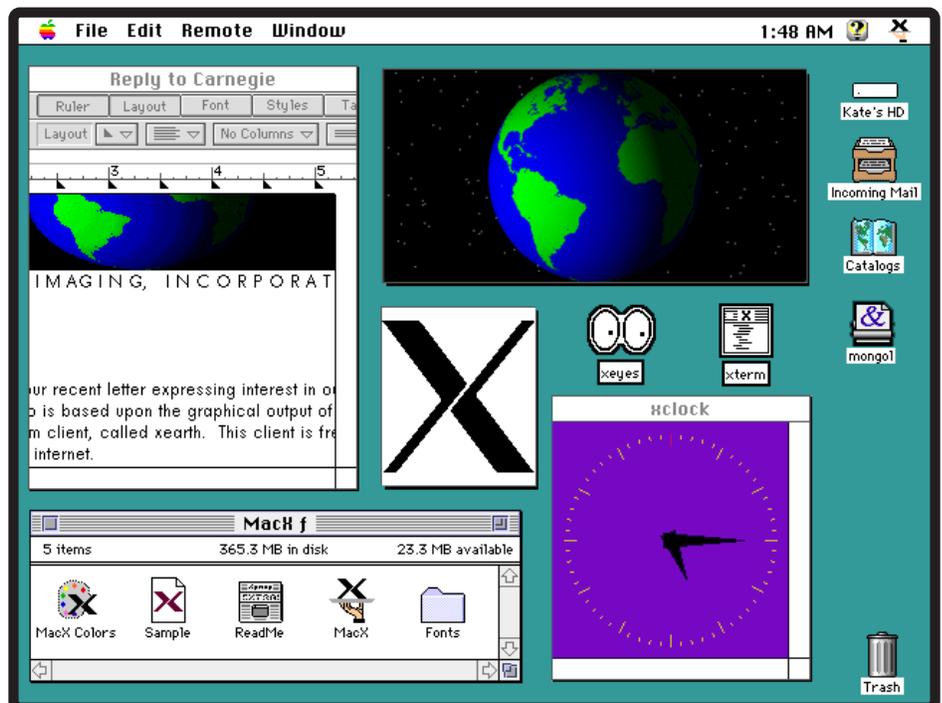

MacX software from Apple Computer delivers high-performance X Window computing for Mac OS-based systems. This easy-to-use software helps increase users' productivity by enabling them to run both Macintosh applications and network-based X client applications on one Mac OS computer.

MacX enables a Mac OS computer to act as an X Window System display server. It supports the latest widely adopted standard for the X Window System: Version 11, Release 6.1 (X11R6.1). MacX 2.0 is optimized for accelerated performance on PowerPC processor-based computers while maintaining high performance on 680x0-based systems. In addition, MacX 2.0 now provides native support for the Open Transport networking architecture, which further enhances server performance, particularly on PowerPC systems.

Using MacX software, software developers, engineers, scientists, higher-education faculty and students, support personnel, and other users can access the rich application and development environments of network-based UNIX and VMS systems without sacrificing the productivity of the Mac OS environment.

With MacX, you can run X Window applications—including OSF/Motif, OpenLook, and DECWindows programs—at the same time as your familiar Mac OS applications. And MacX extends popular Mac OS features to the X Window System. For example, you can customize the software so that you can launch frequently used X Window applications simply by choosing commands from pull-down menus.

MacX: The high-performance X Window solution for the Mac OS.

MacX 2.0

Ordering Information

MacX 2.0

Order No. 403000Z

- CD-ROM containing MacX for both 680x0-based and PowerPC processor-based Mac OS systems and MacTCP, Adobe Acrobat Reader, SimpleText, and Disk Copy software
- *MacX Getting Started Guide*

Product Details

X Window features supported

- Full X11R6.1 specification
- Color and gray-scale X applications
- Font server through the X logical font description (XLFD) protocol
- xdm and xdmcp logins
- rsh and rexec logins
- ICCCM window management
- Rooted or rootless windows
- Automated host login and client startup

System requirements

- Apple Macintosh, Power Macintosh, PowerBook, or other Mac OS-based computer
- 68030, 68040, or PowerPC processor
- Mac OS 7.1 or later (7.5.3 or later recommended)
- At least 8MB of RAM for 680x0-based computers and 16MB for PowerPC processor-based computers
- Local or network access to a CD-ROM drive
- Access to a UNIX or VMS host via one of the following connections:
 - Direct Ethernet or Token Ring
 - LocalTalk bridged to Ethernet (requires Apple IP Gateway)
 - Remote access via PPP, SLIP, or Apple Remote Access Protocol (ARAP)
