

DETAILS

The installer will automatically search for the folder where you originally installed Jedi Outcast and install all of the updates. If the update does not locate Jedi Outcast on your system, you may need to reinstall the game from the original CD and then run the JKIIUp104.exe.

NOTE: This update includes all modifications that were originally incorporated in Jedi Outcast version 1.03. This update addresses multiplayer bug fixes and balance issues only. It will not affect your saved games. All Multiplayer users must use Jedi Outcast version 1.04.

Corrects various multiplayer gameplay issues, including:

- * Corrected issue which caused servers to crash in rare instances.
- * Corrected issue causing damage not to ramp up and down properly when using the backstab move in light saber stance.
- * Corrected bug allowing players to pivot while executing backstab moves in all stances. Players may no longer pivot when executing these moves.
- * Fixed bug causing force pull to be unblockable by people with equal or greater pull rank.
- * Adjusted ammo usage of the Imperial repeater alt-fire.
- * Fixed bug allowing inventory items to be used in FFA saber challenges.
- * Corrected an exploit which allowed players to fall from large heights at a slow rate.
- * Corrected issue which caused pain sounds not to play properly when hit by opponents. Pain sounds should now be relative to the amount of damage taken.

A few other notes on 1.04:

- Saved games are unaffected from 1.03
 - Demos recorded using 1.03 are not compatible with 1.04
 - Mod makers will have to update their mods to reflect new the IP protocol introduced in 1.04. This will be a minor adjustment to your existing mod stuffs.
 - Once you upgrade to 1.04, only servers running version 1.04 will be visible in your in game browser.
- There may be a short period of time where there are few 1.04 servers to play on as server admins update to the new version.

=====

Star Wars Jedi Knight II dedicated server.
Version 1.04

With much gratitude to James Drews and sorting out the problems.

Updated Binary patch 1.04:
protocol changed to prevent confusion attempting to connect to prior versions.
(you must install the 1.03 and 1.04 patches first to get the new pk3 files!)
