|      |\      | \_nnnnnn_\`-`      (____            /
|      |      | _____/           \____           /
|      |      | /                    \___\          /
|      |      | - Let`s burn somethin' Shut up Beavis, MagicLocker`is COOL!!!!
```

### 1.3 distribution

Distribute MagicLocker as far as possible!!!

Everybody should get sucked!!!

## 1.4 licence

I have the licence to SUCK!

## 1.5 disclaimer

DISCLAIMER:

This software is provided "as is" without warranty... \*STOP\* \*STOP\*

Nobody reads a disclaimer, so why should I write one of this long and ugly disclaimers???

But always remember: This program SUCKS and it is SUCKS...

## 1.6 features

SUCKS-Features:

- it has the SUCKS quality brand
- it SUCKS
- high shareware-fee
- nice binary file with 11112 bytes of SUCKS-code

- it's a shell-tool
- it secures your files in the given directory...  
no one can delete them after usage of MagicLocker... cool...
- it is 99% pure, if you have luck, you can make it resident
- uses the dos.library for best performance
- NO MWB-Icon included
- compiled with SUCKS-C/C++ 0.11
- it was touched with CrapTouch (get this cool SUCKS-tool)
- it uses keyfiles to make sure that you pay the shareware
- and of course, it is totally crippled
- NO locale support, I hate writing catalog-files...
- it comes with this very cool AmigaGuide-documentation

## 1.7 requirements

MagicLocker needs:

- any Amiga
- lot of memory during usage... (evaluation version doesn't give it back...)
- and of course, lots of files for its nice SUCKS-features
- NO MUI (© by Stefan Stuntz)
- NO MagicWB (© by Martin Huttenloher)

## 1.8 installation

Installation is very easy:

SIMPLY USE IT!

## 1.9 usage

---

Usage: MagicLocker < dir > lock | unlock

If you supply no option to MagicLocker, it will use the lock-switch as default.

## 1.10 dir

DIR

MagicLocker needs this argument for any operation.

You need to supply a device- or directory-name with the files that should be secured.

For example, "sys:" or "sys:wbstartup".

## 1.11 lock

LOCK

This switch indicates, that the files in the supplied directory should be locked.

Examples: "MagicLocker sys: lock" will secure your complete System-partition

"MagicLocker sys:wbstartup lock" will secure your wbstartup-drawer

## 1.12 unlock

UNLOCK

This switch tells MagicLocker to unlock all the files in the supplied directory or device.

Example: "MagicLocker sys:wbstartup unlock"

## 1.13 address

Author's Address:

standard mail:

SUCKS-Development  
Sucksmania-Street 11

11111 Suckstown  
SUCKSLAND

electronic mail:

Internet: SFX@appl1.hrz.SUCKS.uni-siegen.de

or simply meet me on IRC: Nickname: Shadowfox

## 1.14 History

Program history:

Version 1.0 (11.11.94):

- --- Initial SUCKS-release ---

(Versions 0.1 - 0.111 were only released to my betatesters.)

## 1.15 future

I have lot of plans for future versions of MagicLocker:

- adding an AppIcon  
(I don't know what it should do, but AppIcons are cool...)
  - adding an ARexx port,  
so that you can write lots of sucking ARexx-scripts for MagicLocker...
  - adding a global-lock function, for completely locking your system
  - TCP/IP-support, for remotely locking files
  - implementing a commodity-interface with a nice GUI, lots of windows,  
listviews, gadgets and buttons...
  - implementing some nice patches into MagicLocker, because patches SUCK!
  - adding an unlock function for CD-Rom-files,  
so that you can gain some diskpace on the CD...  
(Currently I have no idea, how I should do it, but it WILL be done  
in the future, because SUCKS RULEZ!)
  - adding locale-support with hundreds of different languages for  
global sucking...
  - rewrite it for use under NetBSD (for all those NetBSD-freaks...)
  - raising the shareware-fee... hehe... this will really SUCK!!!
-

The next version will not be 1.1, but 2.0, because MAJOR releases cost you more money... :-)

## 1.16 credits

Thanks go to:

my SUCKS-Beta-testers:

- Bill Blades
- Jack Trummel
- Kai Eksi
- Stefanie Schlumpf
- Martini Laddenhoher

all IRC-freaks, channels #Amiga and #AmigaGER...

all SUCKS authors (especially to DrMabuse for Nerv, the first SUCKS-program)

and of course to all people who use SUCKS-programs... and GOT sucked... :-)

## 1.17 registration

Since version 1.0 of MagicLocker has been finished, it is a product with the SUCKS quality brand.

The advantages, which grow out of this are well known... >;-)

Before you register, you have the opportunity to test MagicLocker in great detail. However, the unregistered version may SUCKS, because it is totally crippled.

In spite of all this restrictions it should be possible to see if MagicLocker is what you expect (Trust me, IT IS! :-).  
The evaluation version expires on 11.11.2011 at 11:11:11.

When registering you'll get your personal SUCKS-keyfile for MagicLocker which unlocks all crippled features... but maybe not all new features that I will implement in future releases of MagicLocker!

Especially for MAJOR updates a NEW keyfile is needed, but this will cost you additional money!

If you like even the unregistered version of MagicLocker you MUST contribute

---

Send your money to any SUCKS-registration-sides or directly to the Author.

You ask what SUCKS is? ...SUCKS sucks and it is SUCKS and it will suck forever!!!

Stupid Useless Commercial Kiddy Suckware
