Chapter 1

LogConvert

1.1 Welcome to LogConvert.guide!

LogConvert - THE AmIRC logfile stripper by Jari 'Ravelord' Ristiranta

Introduction A short story

Requirements Does it work on Windows 95?

Usage How to use LogConvert

Contact me Mail the author, now!

1.2 Introduction

At the time of the #amiga97 IRC conference I took a look at Aminet to find an AmIRC logfile stripper but didn't find any working ones.

So I decided to make my own and make it as good as possible.

1.3 Requirements

LogConvert requires an Amiga computer with KS 2.0+ and a little free RAM.

1.4 Usage

The program has to be run from CLI.

LogConvert [filename] [#channel] [slideshow] [simple] [complex] [columns n]

filename: the filename of the input file
a ".LC" suffix will be added to the output filename

#channel: which channel to convert

slideshow: the lines will be printed to stdout with small delays instead of writing them to an output file

simple: convert only messages

complex: convert everything - messages, joins, mode changes etc.

columns n: wordwrap at n columns, where n>40

If you leave (some of) these command line options out, the program will ask for them. The slideshow option makes an exception though.

You can break the program by pressing ctrl-c.

1.5 Contact me

I made this program for you. The least you can do for me is to mail me and give some feedback. Both positive and negative feedback is accepted. :)

Run your favourite mailer and mail me now!
