1.2 Changes

Changes since 1.1:

-> I included some fonts I use on my WB, fonts seem to appear into my
FONTS: on their own. After one of my searching raids through FONTS:
(let's face it 5megs IS ridiculous) I decided to include these fonts
in the archive:

- ThinPaZ
- SS Fixed
- SS Prop
- NewTopaZ

-> On request of almost everybody I know (and others) I fabriqued some more dockicons. In full overscan you can fit 42 of em on your WB in just two horizontal rows (Instead of just a few of those bigguns that seem to be the norm these days).

-> I changed the dark-blue shadow on all icons to a mixed grey-blue shadow, this look better (Paul, you convinced me).

-> More DiskIcons: YES!

-> A XEN look-a-like drawer is included. Also added is an even smaller drawer (so you can fit more of them in a window) that (I think) looks even better.

-> Some handy install utilities have been included.

You want still more?? Contact me for requests.

1.3 Copyrights & Distribution

Copyrights & Distrubution

Legality: MagicWB is Copyright by Martin Huttenloher. For more details check out the MagicWB archive for it's licence. Many of the icons in this archive are based on icons that were designed by Martin Huttenloher and other MagicWB artists. I will take no credit for the artistic design of these icons even if the rescaling took considerable effort. If you recognise an icon in this package but you are not mentioned in the credits contact me if you want in it.
The distribution and production of modified icons is done with the permission and approval of Martin Huttenloher.

Distribution: These icons may be freely distributed via BBSs, InterNet/UseNet, software libraries such as Fred Fish's and Aminet CD-ROM, and other similar electronic channels, as long as the archive is not modified, either by adding, removing, or modifying files in it. And as long as no profit is made by the distribution of this package.

If you wish to include one or several of the icons in this archive with other software, contact the author, Eric van Velthooven, for the terms of distribution.

WARNING: By using these icons, you accept the full responsibility for any damage or loss that may occur through their use. The authors can not be held responsible in any way.

Additions: There will surely be thing you would like to add or see added to this package. It should be possible to reach me through Email so speak up, I want to hear it all!

1.4 Requirements

Requirements

Can U run it? All icons included in this archive are in 8 colors, the palette differs slightly from the original MagicWB palette doubleclicking the SmallColors Icon should change it. The Icons are designed to run in a resolution in wich pixels are about twice as high as they are wide, examples are:

- Pal/NTSC-Hires (with or without Overscan)
- Pal/NTSC-SuperHires-Interlace
- Super72 nolace

Be sure to select 8 colors: if U still run Kickstart 1.3 go buy 2.x or 3.1, you're outdated! Sometimes when running WB with more than 8 colors problems occur because of Commodores nutty palette handling. To solve this check aminet for the necceary utilities.

1.5 Introduction

Introduction

What is diz? This is the solution for those who like MagicWb but can't afford to run a workbench in 640*512 or higher. I took all the original MagicWB Icons (and some from other sources) and rescaled them to suit my poorfolk 702*290 hires-overscan workbench. After this I added some new icons, trashed some of Martin Huttenlohers and put them all together. I have also included some brushes for ToolManager and a screendump of my workbench in all its shiny glory.

What's in it? Icons -> Loads and loads of them

Presets -> Palette

-> WBPatters

-> WindowPattern

-> GreenMouse

-> BusyMouse [NickPrefs]

Patterns -> StoneSpecky3

StoneWall

Bricks

DockBrushes -> More and newer

Fonts -> ThinPaz -> a XEN lookalike

Newtopaz -> a thin topaz

SS Fixed -> great 7 pnter

SS Prop -> best iconfont

Templates ->

Default icon backgrounds

Preview -> SmallMagic.Demo

1.6 Installation

Installation

Installation: Do not copy the icons in this archive directly over the original workbench icons. This way information contained in the original icons will be lost forever!

For replacing the icon images, but leaving tooltypes and position information intact, you can use the two utilities I put in the Update drawer, they are not my own but they work for me. (Credits: Gerry Kôrner & Nico Fran ois)

It may be fastest to examine the MagicWB installation script and use it to install SmallMagic. I have never installed these icons from scratch myself so don't ask me how to do it.

If you DO know how to make an easy all purpose installing thingy for SmallMagic and are willing to do so mail it to me ASAP. I don't have the time right now to figure it out myself.

Device icons (Ram, disks etc) can be found in the diskicons drawer. They are saved as drawer icons because they would be invisible otherwise.

The LamerWay: You can update all your icons (easily) with help of a decent KingCon:. By typing:

```
> IconUpdate 201 tcsdw
```

And then throwing in a SmallMagic Icon first and then a old style Icon. Once you get the hang off it U can update your WB in 45 mins. This is however a boring task and should be automised (some day).

1.7 Credits to...

Credits

Credits for the stuff you have just received should go to at least the following people:

```
Martin Huttenloher : The man who started this fab 8 color icon series!
Paul Hernik       : As the first to donate more icons to SmallMagic!
Osma Ahvenlampi   : As general source of information and inspiration!
Gerry K rner &    : For not killing me after I shamelessly included
Nico Fran ois     : their iconfrot utilities in this Icon collection!
Other Authors     : The ones in the "Hey, I drew that Icon" category!
Commodore         : Who made it all possible but had to pay with her
                  : life for doing so! :(
```

Like it? This product is Freeware. This means you are free to thank me in any way you like (a PicassoII would be nice)
