Chapter 1

EasyFind

1.1 EasyFind

```
                EasyFind V1.05
            © 1995/96 Jan Schwenke
                   Cardware
```

1.2 Introducing

What is EasyFind

You can use EasyFind for scanning directories (inkl.subdirectories) of a
Harddrive,CD-ROM,Syquest,Zip,MO-Drive for single files or files with
similar names.For search just enter the name of wanted file(s) and klick
search.In the following requester only choose a drive or directory to
search within,than press OK.
It is able to copy,read,delete,show,archive and unpack founden files by
using other "handling-tools"named in the "Options"window.This kind of
handling you are certainly knowing from filemanagers like DOPUS.
Scanning may be direct (by name) or with the help of indexfiles you had
made before.

1.3 Copyright ...

Licence

Copyright 1995/96 Jan Schwenke

EasyFind is Cardware.
Copy this application only with all files and of course in unchanged form!
Best for do so is,copy it as the same archive you get,OK?
NOTE,you are using this program at your own risk.

1.4   Cardware

If you like this little,usefull bit of bytes,you should feel so free
to send me a nice Postcard of your hometown.

Any kind of clue and suggestion are welcome.

1.5   Requirements

Systemrequirements

EasyFind needs at least Kickstart-Version 2.04.

Furthermore your system must operate NOW with Version 3.3 of
MagicUserInterface by Stefan Stuntz.

1.6   Programstart

Programstart

It is possible to start EasyFind from Workbench or from Shell.

Usage from Shell

CLI options:

MAX/K BUFFER/K

Command line:

EasyFind [MAX <maximum hits>] [BUFFER <directorybuffer>]

Usage from Workbench

At the moment following Toolypes can be used:

MAX – Number of maximum hits. If the maximum hits will be reached a requester will
    ask to stop the search.
    Default: ---

BUFFER – Size of directorybuffer. If the buffer will increased EasyFind can read
    directorys faster.
    Default: 300.

1.7 MagicUserInterface

                        This application uses

                        MUI – MagicUserInterface

                (c) Copyright 1993/94 by Stefan Stuntz

MUI is a system to generate and maintain graphical user interfaces. With
the aid of a preferences program, the user of an application has the
ability to customize the outfit according to his personal taste.

MUI is distributed as shareware. To obtain a complete package containing
lots of examples and more information about registration please look for
a file called "muiXXusr.lha" (XX means the latest version number) on
your local bulletin boards or on public domain disks.

        If you want to register directly, feel free to send

                        DM 30.- or US$ 20.-

                                to

                        Stefan Stuntz
                    Eduard–Spranger–Straße 7
                        80935 München
                            GERMANY

1.8 Tips

Good to know

It is possible to use crunched Indexfiles with the help of MCP.
Simply put down EasyFind in MCP's prefs lister"PackerPatch"

MCP (© ALIENDESIGN) is available on AMINET under util/cdity and
should actually run on every tidy AMIGA.

1.9 Soon in this Program

```
In preparation

When I have a little bit more time.
- Support for further Packers
- "intelligent" indexfiles
- Possibility to use crunched Indexfiles direct.
  (Previously only via MCP possible.)
```

1.10 History

```
Versionhistory

V1.05
- Packer: dms added
- Bugfix: Unpack with lha,lzx,zoo
- Automaticly recognice of packers (Packer: AUTO)
- Unpacker runs asynchronous -> removed

V1.04
- Unpacker runs now asynchronous
- LX-Outputproblem fixed
- Code optimized

V1.03
- Indexfiles are now smaller
- Stopbutton while indexseach added
- Gauge while indexsearch added
- <Make new indexfile> is now faster
- new tooltype/option BUFFER

V1.02
- Problem with guides fixed
- new tooltype/option MAX
- Stacksize will now checked while starting EasyFind (min 40k)

V1.01  21.07.1996
- French catalog
- Gauge (while searching) added
- Packer: zip added
- Unpacker: unzip,unarj added
- Bugfix: Archivefunction

V1.00  30.06.1996
- fully localized

V0.22  (internal version)
- Added "AboutMUI"
- EasyFind needs now at least MUI3.3
- Now compiled with MaxonC++ 3.1
- Bugfix: Search with help of Indexfiles
- Comes also with an english guide
```

```
V0.21 (internal version)
- Added the function BREAK while search is running
- Internal"Bugreport"of EasyFind localiced
- Programinitialation improved
- Little rework of german guide

V0.20  28.04.1996
- Bugfix: Copyfunction reworked
- Bugfix: Make Indexfile
- Bugfix: Search
- Smaller cosmetic changes

V0.19  05.04.1996
- Question before deleting files built in again
- Searchpath will be save in the EasyFind.config file
- Searchpath will no longer automatic reset to SYS:
- Appwindow -> Choice of searchpath via Drag'N'Drop now possible

V0.18  12.01.1996
- First public version
```

1.13   Programpart

```
Programpart

Path
To select a path for scanning you only have to press the searchbutton.
```

Searchword
Wanted word or wordfragment.It's not necessary to set any pattern(* or #?)
With an option in the menu you can definy to scan for whole words or
wordfragments.

Search
Starts to looking for the wanted word.Before that a searchpath
must be selected.

Invert
Inverts the choice within a list.

None
Returns the choice within a list.

Delete
Deletes the choosen files.

Copy
For copy files
The destination drawer or partition will be set up via ASL-Requester.

Unpack
Unpacks crunched files with specifiyed unpacker.
The destination will be set up also via ASL-Requester.

Archive
To crunch files with the packer,you specifiyed in optionspart.
The destination....the end you should know even.

Read
Shows you textfiles with the help of selected viewer(for example MultiView).

View
Shows files (pictures) by using selected viewer.

1.14   Optionspart

Optionspart

Indexfile
Define indexfile, which will be scanned while a indexsearch.

Make new indexfile
Make a new indexfile of directories.

case sensitive
Upper-or lowercase of words is supported and may be applyed for search.

Directoryname
When this function is set,than EasyFind shows you not only files,but also
directories with the same or similar name.

Exact

Looking only for whole words.

Indexsearch
Search in an indexfile instead of directscan on harddrive.

Packer
Selected Packer.
Supported are:lha,lzx,zoo,arc,lharc,zip.
Make sure,that the source is C:to choose them directly.
Of course you can use other packers.In that case please set the complete
path.Also,theese packers should similar work like LHA does.
(so: "packer [<options>] command archivename aimpath). Archivename and
aimpath will be added by the program itself.

Unpacker
Supported are:lha,lzx,zoo,arc,lharc,lhunarc,lx,unzip,unarj,dms.
Archivname and aimpath will be added by the program itself.(exeption LX)
Oterwise the handling is in fact the same as I just described for the packers.
AUTO means the automaticly recognisation of packers.

Textviewer
Selected textviewer.
