### 1.3 rEQUIREMENTS oF wAECHOD!

-----[ rEQUIREMENTS ]-----

- Ø An Internet connection
- Ø A working TCP/IP stack (eg AmiTCP, Miami)
- Ø Hardly ANY memory :)
- Ø NO external libraries!
- Ø s:banner (if you desire a header for your telnet pager)

Back to main menu...

### 1.4 Installing WAEchoD

-----[ ;NSTALLATION ]-----

Installation of WAEchoD comes in three parts... you need to install the main exe file (WAEchoD) and you need to edit AmiTCP:db/inetd.conf (or whatever is equivalent to your TCP/IP stack). You also need to edit/copy s:banner, which can be a welcome message of 1-6 lines... use the included file as an example.

- 1) Add the following line to AmiTCP:db/inetd.conf

```
echo          stream tcp dos bin - AmiTCP:serv/WAEchoD
```

- 2) Copy the file WAEchoD to AmiTCP:serv/
- 3) Edit/Copy s:banner

And there you go! One copy of Wild Amiga Echo Daemon raring to go :)

Back to main menu...

### 1.5 uSAGE oF WAEchoD!

---

-----[ uSAGE oF WAEchoD ]-----

Test out WAEchoD..! First of all, run the exe locally (execute it in the cli by typing the following line)

AmiTCP:serv/WAEchoD

You should see the default welcome banner, and some following instructions. Simply type your message, and select an option after pressing return after line 3!

NOTE: Messages can be 1-3 lines only atm :/

The message will be sent through, with a window, displaying the message automatically opening.

For use via the Internet, simply get people to telnet to your host on port 7! For example, for people to telnet to me they have to type:

telnet bradman.demon.co.uk 7

Other examples could be:

telnet joe-bloggs.u-net.com 7

telnet infinity.demon.co.uk 7

And others... you should find that you have a working, useful telnet pager that people can use to find out if you're online, tell you where they are on IRC, or just say hello with :)

## 1.8 HISTORY of WAEchoD!

-----[ HISTORY of WAEchoD ]-----

Pre v0.9ß - Unknown, BSP Development hve only taken over coding of WAEchoD from this release..

v0.9ß - Added "About" option from selection section.  
- Various minor code changes.  
[Never publically released]

v1.0 - THIS VERSION [First Public Release]

- Added banner adding via s:banner.  
- Changed copyright notices, about texts etc in the program.

## 1.10 dISCLAIMER - iMPORTANT!

I will not take any blame for this program screwing up yer HD or whatever.. so don't have a go at me if it does!

As far as I know, this program is fine :-)
