# Chapter 1

## 077632b0-0

### 1.1 Internet Utilities

```
~~~~~  
Internet Utilities  
v1.0 beta  
  
4/5/98  
  
~~~~~
```

```
Introduction - What it's all about  
Installation - Get it up and going  
Usage        - Ok, now what does it do?  
Thanks       - Pay tribute to greatness  
Copyright    - For scripts? :)  
Author       - About the author
```

### 1.2 About the author

Hello. My name is Tristan R. Young, and I've been working with computers for 17 ↵  
years.  
Starting with a TRS-80 COCO 2, worked my way down to an Intel 386, then back up to ↵  
the  
machine which gave Billy G. plenty of ideas to rip off - The Amiga.

I'm 25 years old (12/27/72) living in Ottawa, Ontario, Canada. After a long day ↵  
at  
work trying to debug Windows NT 4.0 crashes, I look forward to returning home to ↵  
my  
Amiga 3000.

My future goals include integrating an Amiga into my Honda, educating the less ↵  
fortunate (Intel-compatible owners), and to open the best dance-bar this side of ↵  
the  
milky way.

---

A computer technician by trade, I've devoted much of my focus to Astronomy, which computers play an active part. Learning the latest technology and applying it is ←  
what  
I'm all about.

Ok, this is boring, so go read something else.

Oh, one more thing. If you need to reach me, EMail: tyoung@netrover.com

### 1.3 Copyright information

The scripts contained within are copyright (c) 1998 The Tower Of Scuz.

Usage is free. Please pass these on to other fellow Amiga users.

If you use my scripts on your Amiga, please send me a "THANK YOU" EMail.

### 1.4 So long, and thanks for all the fish!

I'd like to give a warm-hearted thanks to the following people...

- Amanda Thompson - My lovely girlfriend, who puts up with my rantings :)
- Oliver Wagner - Author of Voyager-NG, simply the best Browser available on any computer platform.
- Marcel Beck - Author of YAM, simply the best EMail program I've ever used.

And all of the other people who are still supporting the Amiga. The Amiga "IS", ←  
and  
will always be because of them.

### 1.5 Introducing.... 2 small scripts

Nothing fancy here. These 2 scripts do 2 things...

1. Click on a URL inside a YAM message, and Voyager will execute (if neccessary) and automatically bring up that URL.
2. Click on a MAILTO: link on a Webpage in Voyager, and YAM (v2.0) will execute (if neccessary) and automatically enter the EMail address, and the URL will be passed as the subject.

Requirements:

---

```

YAM v2.0+
Voyager-NG 2.95+
Amiga
18mb RAM (oops, sorry - thas was the Windows version :)

```

## 1.6 Duh, how do I install a script?

How to install a script

1. You've done the first step already (awesome).
2. Move the 2 script files into a directory of your choice.

<SARCASM>

3. Bitch and complain about how badly an install script is needed. :)

</SARCASM>

## 1.7 How to use a script

Voyager

1. Load Voyager
2. Open your General Config menu item
3. Select the MAIL/NEWS submenu
4. For the MAIL editor, cycle through to "EXTERNAL"
5. In the textbox beside the cyclegadget, enter:

```
dh1:rexxc/rx dh1:scripts/yam.rexx %t %s
```

6. Edit the YAM.REXX script and set your path for YAM.

\* note \* don't change the order of the "%t %s".  
 \* note \* Voyager doesn't seem to clone the path, so pointing specifically to the RX program is neccessary.

YAM

1. Load YAM
2. Open your Configuration menu item
3. Select the AREXX submenu
4. Select "When double-clicking an URL", and set it up as:

```

Cyclegadget: AREXX
Script: dh1:scripts/gotourl.rexx
Open console window: no checkmark
Wait for termination: no checkmark

```

5. Edit the GOTOURL.REXX script and set your path for Voyager.
