1.2 introduction

You all wonder if this is just another ShapeShifter video-driver ? It is, but this driver is only for someone equipped with an 68040. It should also be a bit faster then the other drivers out right now. You can only use 256 colors, and i'm never going to support any other color-depths.

Just try it out and give me any feedack on what i should change or add. Bug- ← reports

and similar stuff is also welcome(!?).

1.3 requirements

Requirements :

- Shapeshifter 3.2+ (only tested on V3.7!)
- MC68040+

- MMU and FPU
- Kickstart 3.x+
- Some FAST-Memory

1.4 distribution

ThumaSpeed is Copyright © 1997 ThumaStream Software & Nerve Axis
All rights reserved

This driver can be distributed by anyone as long as NO money is charged for it. The archive in which this driver came must not be changed in any way.

1.5 installation

To install just copy the ThumaSpeed driver to the "Video Drivers" directory. It should be in the ShapeShifter main directory.
And that is it =)

1.7 Thank you!!!

I want to thank the following people:

The NerVe Axis posse
for being there for me =)

And i also wan't to thank all Amiga-owners for using the best computer ever made.

1.8 usage

It's quite easy if you already used ShapeShifter for some time. Just start the preferences program and go into the graphics-section. Change the colordepth to 8 bitplanes (256 colors). As a screen-type choose "External". The External driver should be my ThumaSpeed. Pick a screen-mode and set the size, but remember that the width have to be a multiple of 32. Now just start the ShapeShifter and everything will hopefully work.
If you have any problems please contact me for help.
