Chapter 1

port_example

1.1 Introduction to Port

```
Port is another 'wrapper' object for a system structure - exec.library's
message port. This is used in inter-task communication such as intuition
or arexx.

There is an  autodoc  file available or this object.

To know more about message ports read the RKRM or take a look at the  AEE  guide  ←
    about it.
```

1.2 Where to use this object

```
Wherever you need a port.
```

1.3 See also

```
Port derived objects and Amiga system documentation about message ports.
