1.2 Welcome to Bootlogger...

Welcome to Bootlogger

Welcome to Bootlogger V1.4 - I coded the orginal Bootlogger after seeing a version of this type of program produced by someone else and decided I could make a better version :) This version is around 7k smaller than the other program and the layout of the Log is much better.

V1.0, V1.1 & V1.2 where made by me around a year ago but as I lost the source code I have re-done it!

Now in version 1.4 I have enclused an option for when you bootup your computer hold down F10 and it will place a star by that log, if you do this everytime you will be able to check the ones with the stars and know that they are yours, all others will be suspicious ones ;)

1.3 Installing Bootlogger...

How to install Bootlogger

- Copy the file 'bl' to your C: directory
- Load up a text editor and open up your S:user-startup
 - At the bottom of this file type C:bl
- Save the file
- Reset your computer, vola done! :)

Now everytime you computer is booted up the exact time and date are logged to a file bl.log that can be found in your C: directory. If you move or delete bl.log a new one will be created in the C: directory. If you hold down F10 upong bootup until everything has stopped loading it will place a star by that log so you know that it was you who booted up the computer.

1.7 The history of MaxsALLChange...

The history of Bootlogger

V1.0 (??/??/96) - First release of Bootlogger (LOST)

V1.1 (??/??/96) - Second release (LOST)

V1.2 (??/??/97) - Third release (LOST)

- (None of the above versions where uploaded to the Aminet)

V1.3 (3/2/98) - Forth release, Better understandable log file

Smallest main file yet. Only 8,852k

V1.4 (6/2/98) - Added feature to place a star by your bootups
by pressing F10 while the computer is loading.
