1.2   Legal

```
 ---------------------------------
    LEGAL STUFF AND DISTRIBUTION
 ---------------------------------
```

  No guarantee of any kind is given that the program described in this
document is 100% reliable. YOU USE THIS PROGRAM AT YOUR OWN RISK!! I will
not take responsibility for any damage or data loss caused by use of this
program!

  This program is a Mailware. This means you have to send me an E-Mail or
a postcard if you use MaxMenu regularly.

  This program may be freely distributed for non-commercial purposes, as
long as all the files in the original archive are present and have not
been modified in any way. No charge for MaxMenu may be made, other than
a reasonable cost to cover the media and copying time.

If you wish to include MaxMenu on a magazine cover disk, you may do so
as long as you send a complimentary copy of the magazine issue in which
it appears to my home address. The entire package must be included on the
disk, not just the executable. Please contact me in advance to ensure
you have the latest version.

1.3 Introduction

```
   ------------------
      INTRODUCTION
 --------------------
```

For a long time I was using Win95 taskbar clone. The thing that bored
me was a lot of clicking with mouse (click on 'start', then on 'programs'
then on 'disk', then on..). The solution was ToolManager which used a lot
of space on screen (for every executable one button) and when i put about
50 programs on dock i couldn't see my beaitiful Workbench. Then i decided
to create an utility which wont need much clicking and wont take too much
space on screen, so i created MaxMenu.

```
   ------------------
      REQUIREMENTS
 --------------------
```

- Amiga :)

- KS 2.x or greater (I think)

- ScreenNotify.library - by Stefan Becker (included)

- ReqTools.library - by Nico Francis (included)

- WBStart.library 2.2+ - by Stefan Becker (included)

1.4 Installation

```
   ------------------
      INSTALLATION
 --------------------
```

Installation of MaxMenu is very simple - just start the installation
script that I have included in this archive. If you want to install it
all by yourself then copy the contents of directories C, Prefs, WbStartup
and Libs to their equivalents in SYS: partition. Extract ScreenNotify and
WBStart archives included in this package and copy contents of their Libs
drawer to LIBS:.

1.5 Configuration

```
   ------------------
      CONFIGURATION
 --------------------
```

Configuration is altered by a small utility which I included in the
Prefs drawer of archive.

On the main window you are presented with a:

```
    Font   - select font to be used on menus and items (really)
    Pos    - determine position of MaxMenu window

    Add    - add new menu
    Edit   - edit menu
    Remove - remove menu
    Up     - moves menu up
    Down   - moves menu down

    SAVE   - save changes on disk
    USE    - use changes
    CANCEL - forget the changes
```

the next window is almost the same ...

the edit item window:

```
    Name   - item name
    Type   - choose the filetype
    File   - executable file
    Args   - arguments to be used with file
```

1.6 ToDo

```
   ----------------
      TO DO LIST
 ------------------
```

- recompile programs so they can be started directly from WB

- fix bugs

do you have any new ideas?

1.7 History

```
   -------------
      HISTORY
```

```
----------------
```

```
Version 1.1:
 MaxMenu
   - gadgets don't change height as font is bigger than 6 - FIXED
   - when you change font in preferences, MaxMenu doesn't update - FIXED
   - when some button is pushed submenu opens, but is is pushed again
     submenu closes and reopens again - now just closes
   - added WBStart.library support
   - added Batch and ARexx file support

 MaxMenu Prefs
   - program doesn't detect mouse doubleclick on listview - FIXED

Version 1.0:
   - first release
```

1.8 Author

```
   ----------------------
     HOW TO CONTACT ME
 --------------------------
```

```
I can be contacted via Internet at:

    max2@iname.com
```

If you have any comments, bug reports or new ideas, fell free to mail
them to me. If you think you can paint some nice icons for MaxMenu and
Preferences editor please send them to me so I can include them in future
versions of this archive.

I can also be reached by snail mail at this address:
