

File menu

Updates the changes you made in your CorelMEMO and reflects those changes in the CorelMEMO you inserted in your program.

Saves the current CorelMEMO's header text, body text, colors, fonts, and picture as the default settings - the settings that will be used each time you create CorelMEMO.

Opens the Print dialog box, which allows you to print your work, modify print options, and change the printer and its properties.

Opens the Print Preview dialog box, which allows you to see how your drawing will look before it is printed.

Opens the Print Setup dialog box which allows you to change the printer and printer properties.

Exits the main CorelMEMO window and returns to the program.

Edit menu

Reverses the action you just performed. If you can't undo an action, or if there are no actions to be undone, the Undo command appears as Can't Undo or is grayed out.

Removes the current selection and places it onto the Windows Clipboard. From the Clipboard, you can paste it in to another Windows application. The cut object remains on the Clipboard until you cut or copy another object onto the Clipboard. Only one object can be placed on the Clipboard at time.

Copies the current selection on to the Windows Clipboard. From the Clipboard, you can paste it in to another Windows application. The copied object remains on the Clipboard until you cut or copy another object onto the Clipboard. Only one object can be placed on the Clipboard at time.

Pastes the contents of the Windows Clipboard into your CorelMEMO. Objects are placed on to the Clipboard using either the Cut or Copy command, and remain there until you copy or cut another object, or end the current Windows session. Only one object can be placed on the Clipboard at time.

You can change the size of the Memo, and the size of the window that contains it. Each time you resize your CorelMEMO, you should resize the main CorelMEMO window.

You can change the picture that displays in the top-left corner of the Corel Memo. By default, bitmap of light bulb appears.

Color menu

Opens the Header Text Color dialog box, which allows you to change the color of the text that appears in the header.

Opens the Body Text Color dialog box, which allows you to change the color of the body text.

Opens the Paper Text Color dialog box, which allows you to change the color of the paper.

Font menu

Opens the Header Text Font dialog box, which allows you to change the font of the text that appears in the header.

Opens the Body Text Font dialog box, which allows you to change the font of the body text.

[View menu](#)

Displays or hides the Toolbar, which is group of buttons that provides quick access to series of commands. To find out the name of button in the toolbar, position the mouse over button. The small pop-up "bubbles" that appear are called Tooltips. If no check mark appears next to the command name, the Toolbar is hidden. If check mark is there, the Toolbar is displayed.

Displays or hides the Status Bar, which provides useful information about actions performed in CorelMEMO. If no check mark appears next to the command name, the Status Bar is hidden. If check mark is there, the Status Bar is displayed.

Resizes the main CorelMEMO window to fit the CorelMEMO's size.

Displays the current CoreMEMO as small picture in your program.

Changes CorelMEMO's units to inches.

Changes CorelMEMO's units to millimeters.

Help menu

Displays the contents of the CorelMEMO Help system, which provides easy access to descriptions and procedures that will help you learn how to use CorelMEMO. Click the Contents tab to display conceptual and "how-to" information. Click the Index tab, to search by feature names, synonyms, and tasks. Click Find to perform full-text search of Help.

Displays the contents of the CorelMEMO Help system, which provides easy access to descriptions and procedures that will help you learn how to use CorelMEMO.

Opens the About CorelMEMO window, which displays information about your copy of CorelMEMO.

Changes the cursor to the What's This? cursor. When you click component of the application with this cursor, context-sensitive Help topic about the object you clicked is displayed in pop-up window.

Displays the current picture used in the CoreMEMO.

Allows you to browse folders on your system for other bitmaps.

The header of your CorelMEMO.

The body of your CoreMEMO.

The frame of your CorelMEMO.

Displays pictures you can include in your CorelMEMO.

Allow you to move the CoreMEMO horizontally and/or vertically.

CorelMEMO is an electronic notepad that allows you to insert notes and bitmaps into any program that supports Object Linking and Embedding (OLE). Use CorelMEMO when you want to leave yourself a reminder, note a change in a document, or place a comment into a program.

In the top left-hand corner of the main CorelMEMO window, a picture is displayed. You can use the ones provided with CorelMEMO, or include your own bitmaps to customize your CorelMEMO.

Enlarges the window size to fit your screen.

Minimizes the size of the main CoreMEMO window to an icon.

Changing color in CorelMEMO

You can change the paper color, as well as the color of the text both in the heading and the body of the CorelMEMO.

To change the header text color

1. Double-click the CorelMEMO to open the main [CorelMEMO window](#).
2. Click Color, Header Text.
3. Click a color from the Color Palette that appears.
4. Click OK.
5. Click File, Update Graphic.
6. Click File, Exit And Return To Graphic.

To change the body text color

1. Double-click the CorelMEMO to open the main CorelMEMO window.
2. Click Color, Body Text.
3. Follow steps 3 to 6 from the above procedure.

To change the paper color

1. Double-click the CorelMEMO to open the main CorelMEMO window.
2. Click Color, Paper.
3. Follow steps 3 to 6 from the "To change the header text color" procedure.

Tips

- To see a change in the body text color, you must have text in the body of the CorelMEMO. Similarly, to see a change in header text color, you must have text in the CorelMEMO header.
- When pasting text into the header of CorelMEMO, the text assumes the header's text attributes.
