Introduction to File Management

Contents

About Files 1-4
File Forks 1-4
File Size 1-6
File Access Characteristics 1-8
The Hierarchical File System 1-9
Identifying Files and Directories 1-12
Using Files 1-12
Testing for File Management Routines 1-14
Defining a Document Record 1-15
Creating a New File 1-16
Opening a File 1-18
Reading File Data 1-22
Writing File Data 1-23
Saving a File 1-26
Reverting to a Saved File 1-30
Closing a File 1-32
Opening Files at Application Startup Time 1-34
Using a Preferences File 1-36
Adjusting the File Menu 1-37
File Management Reference 1-38
Data Structures 1-39
File System Specification Record 1-39
Standard File Reply Records 1-39
Application Files Records 1-41
File Specification Routines 1-42
File Access Routines 1-43
Reading, Writing, and Closing Files 1-44

Manipulating the File Mark 1-46
Manipulating the End-of-File 1-48
File and Directory Manipulation Routines 1-49
Opening, Creating, and Deleting Files 1-49
Exchanging the Data in Two Files 1-53
Creating File System Specifications 1-54
Volume Access Routines 1-55
Updating Volumes 1-55
Obtaining Volume Information 1-56
Application Launch File Routines 1-57
Summary of File Management 1-61
Pascal Summary 1-61
Constants 1-61
Data Types 1-62
File Specification Routines 1-63
File Access Routines 1-63
File and Directory Manipulation Routines 1-63
Volume Access Routines 1-64
Application Launch File Routines 1-64
C Summary 1-64
Constants 1-64
Data Types 1-65
File Specification Routines 1-66
File Access Routines 1-67
File and Directory Manipulation Routines 1-67
Volume Access Routines 1-68
Application Launch File Routines 1-68
Assembly-Language Summary 1-68
Global Variables 1-68
Result Codes 1-69
