

Figures, Tables, and Listings

Chapter 1

Introduction to QuickTime 1-1

Figure 1-1	QuickTime playing a movie	1-5
Figure 1-2	A QuickTime movie with Apple's movie controller	1-8
Figure 1-3	A QuickTime movie with an active selection rectangle	1-9
Figure 1-4	Capturing and playing back movies	1-11
Figure 1-5	Apple's movie controller with a portion of the movie selected for editing	1-12
Figure 1-6	A monitor window	1-13
Figure 1-7	Compression settings	1-14

Chapter 2

Movie Toolbox 2-1

Table 2-1	Common movie time scales	2-4
Figure 2-1	Time scales	2-5
Figure 2-2	A time coordinate system and a time base	2-6
Figure 2-3	A movie's time coordinate system	2-7
Figure 2-4	A movie containing several tracks	2-8
Figure 2-5	A movie, its preview, and its poster	2-9
Figure 2-6	A track in a movie	2-10
Figure 2-7	A track and its media	2-11
Figure 2-8	A media and its data	2-12
Figure 2-9	Movie characteristics	2-13
Figure 2-10	Track characteristics	2-15
Figure 2-11	Media characteristics	2-17
Figure 2-12	Spatial processing of a movie and its tracks	2-19
Figure 2-13	A track rectangle	2-20
Figure 2-14	Clipping a track's image	2-21
Figure 2-15	A track transformed into a movie coordinate system	2-21
Figure 2-16	Clipping a movie's image	2-22
Figure 2-17	A movie transformed to the display coordinate system	2-23
Figure 2-18	Clipping a movie for final display	2-23
Figure 2-19	A point transformed by a 3-by-3 matrix	2-24
Figure 2-20	The identity matrix	2-24
Figure 2-21	A matrix that describes a translation operation	2-25
Figure 2-22	A matrix that describes a scaling operation	2-25
Figure 2-23	A matrix that describes a rotation operation	2-26
Figure 2-24	A matrix that describes a scaling and translation operation	2-26
Listing 2-1	Using the Gestalt Manager with the Movie Toolbox	2-32
Figure 2-25	An alert box that tells the user that QuickTime is unavailable	2-32
Listing 2-2	Getting a movie from a file	2-33
Figure 2-26	A dialog box used when searching for a movie's data	2-34
Figure 2-27	A dialog box that informs the user the movie file cannot be found	2-35

Figure 2-28	A dialog box that allows the user to specify a movie file to try	2-35
Figure 2-29	An alert for an invalid movie file	2-36
Figure 2-30	An alert when QuickTime cannot be found	2-36
Figure 2-31	A movie controller playing a movie	2-37
Listing 2-3	Playing a movie using a movie controller component	2-37
Listing 2-4	Playing a movie	2-40
Listing 2-5	Creating a movie: The main program	2-44
Listing 2-6	Creating and opening a movie file	2-45
Listing 2-7	Creating a video track	2-47
Listing 2-8	Adding video samples to a media	2-48
Listing 2-9	Creating video data	2-50
Listing 2-10	Creating a sound track	2-51
Listing 2-11	Creating a sound description	2-53
Listing 2-12	Parsing a sound resource	2-57
Figure 2-32	A sample movie Save As dialog box	2-60
Listing 2-13	Handling movie update events	2-61
Figure 2-33	SFGetFilePreview or SFPGetFilePreview dialog box without preview	2-64
Figure 2-34	SFGetFilePreview or SFPGetFilePreview dialog box with preview	2-64
Figure 2-35	Standard preview dialog box for SFGetFilePreview and SFPGetFilePreview	2-65
Figure 2-36	StandardGetFilePreview or CustomGetFilePreview dialog box without preview	2-66
Figure 2-37	StandardGetFilePreview or CustomGetFilePreview dialog box with preview	2-67
Figure 2-38	Dialog box showing automatic file-to-movie conversion option	2-67
Figure 2-39	Dialog box for saving a movie converted from a file	2-68
Figure 2-40	Standard preview dialog box for CustomGetFilePreview	2-69
Listing 2-14	Two sample movie cover functions	2-70
Listing 2-15	Creating a track matte	2-71
Figure 2-41	Dialog box showing automatic file-to-movie conversion option	2-302
Figure 2-42	Dialog box for saving a movie converted from a file	2-303
Figure 2-43	Transforming an image with the RectMatrix function	2-349
Figure 2-44	Matrix created as a result of calling the RectMatrix function	2-350
Figure 2-45	Transforming an image with the MapMatrix function	2-351

Chapter 3

Image Compression Manager 3-1

Figure 3-1	24-bit photographic image	3-13
Figure 3-2	24-bit synthetic image	3-14
Figure 3-3	8-bit graphic image	3-15
Figure 3-4	8-bit photographic image	3-16
Figure 3-5	Compressor performance for a 921 KB, 24-bit, photographic image	3-17
Figure 3-6	Compressor performance for a 502 KB, 24-bit, synthetic image	3-20

Figure 3-7	Compressor performance for a 30 KB, 8-bit, graphic image	3-23
Figure 3-8	Compressor performance for a 302 KB, 8-bit, dithered, photographic image	3-26
Table 3-1	Fields of the PICT opcode for compressed QuickTime images	3-30
Table 3-2	Fields of the PICT opcode for uncompressed QuickTime images	3-31
Listing 3-1	Compressing and decompressing an image	3-32
Listing 3-2	Compressing and decompressing a sequence of images: The main program	3-39
Listing 3-3	Compressing and decompressing a sequence of images: Saving a sequence to a disk file	3-40
Listing 3-4	Compressing and decompressing a sequence of images: Drawing one frame with QuickDraw	3-43
Listing 3-5	Compressing and decompressing a sequence of images: Decompressing and playing back a sequence from a disk file	3-46
Figure 3-9	Image bands and their measurements	3-50
Table 3-3	Compressor type descriptors	3-68
Figure 3-10	The operation of the <code>DrawTrimmedPicture</code> function	3-104

Chapter 4

Movie Resource Formats 4-1

Figure 4-1	Movie files and single-fork movie files	4-4
Figure 4-2	The structure of a single-fork movie file	4-5
Table 4-1	Apple-defined atom types	4-6
Figure 4-3	A sample QuickTime atom	4-7
Figure 4-4	Sample organization of a one-track video movie	4-9
Figure 4-5	The layout of a movie atom	4-11
Figure 4-6	The layout of a movie header atom	4-12
Figure 4-7	The layout of a track atom	4-14
Figure 4-8	The layout of a track header atom	4-15
Figure 4-9	The layout of a media atom	4-17
Figure 4-10	The layout of a media header atom	4-18
Figure 4-11	The layout of a handler reference atom	4-19
Figure 4-12	The layout of a user-defined data atom	4-21
Figure 4-13	The layout of a clipping atom	4-23
Figure 4-14	The layout of a track matte atom	4-24
Figure 4-15	The layout of an edit atom	4-25
Figure 4-16	The layout of an edit list table	4-26
Figure 4-17	The layout of a media information atom for video	4-27
Figure 4-18	The layout of a media information header atom for video	4-28
Figure 4-19	The layout of a media information atom for sound	4-29
Figure 4-20	The layout of a sound media information header atom	4-30
Figure 4-21	The layout of a data information atom	4-32
Figure 4-22	Samples in a media	4-34
Figure 4-23	The layout of a sample table atom	4-35
Figure 4-24	The layout of a sample description atom	4-36
Figure 4-25	The layout of a time-to-sample atom	4-37
Figure 4-26	The layout of a time-to-sample table	4-38
Figure 4-27	An example of a time-to-sample table	4-38

Figure 4-28	The layout of a sync sample atom	4-39
Figure 4-29	The layout of a sync sample table	4-40
Figure 4-30	The layout of a sample-to-chunk atom	4-40
Figure 4-31	The layout of a sample-to-chunk table	4-41
Figure 4-32	An example of a sample-to-chunk table	4-41
Figure 4-33	The layout of a sample size atom	4-42
Figure 4-34	An example of a sample size table	4-43
Figure 4-35	The layout of a chunk offset atom	4-44
Figure 4-36	An example of a chunk offset table	4-45
Figure 4-37	The layout of a shadow sync atom	4-45
Figure 4-38	The layout of a shadow sync table	4-46
