### 1.2 \*\*\*\*\* Read Me First \*\*\*\*\*

This is a very early BETA version of the Gadtools Source Code Creator for Blitz ↔  
Basic  
v2.1. Its still in the early stages with lots of functions still to be added .( ↔  
See  
To Do List)

All fucntions should work on thier own except for the requesters. They require ↔  
the  
Reqtools.library to be copied to sys:Libs. (Use installation script)

### 1.3 Introduction

---

A while ago now when I was first learning blitz 2.1 I realised how tedious it was to get the exact positions for the Gadgets in the windows. So i thought 'wouldn't it be great if you could use the mouse to create a GUI?'

I then started work on the very first version of this program for use for myself. It was only designed to get the poistions for me and all tags and extras could be added afterwards.

Not long afterwards I thought other people could benefit from this program so I started work on adding extras to the program itself. A next version was created for release into the Public Domain as freeware.

## 1.4 Information

This version of GT Code Creator is BETA and has been tested on the following computers: -

68030, 40MHz FPU, 16mb FAST RAM, 2.1 GB HDD, WB 3.1, AGA  
68030, 40MHz, 2mb FAST RAM, 2.1 GB HDD, AGA  
Windoze PC running WinUAE <---Had problems!

I need your help if GT Code Creator is going to continue development. I need people to get registered. To be registered all you need to do is do some testing for me. Just use the program and tell me what you think. If you find any bugs please tell me through e-mail or through a letter (see Address. You will then get a registration code from me ok. Just put this in the registration code box in the registration program. You will then be able to get rid of the information window, when you first load the program, through the tooltype located in the icon.

There are a few errors known so far that I am currently fixing. For more information go to the errors page.

There are still lots of functions to be added to the program. Any registered user will automatically get free updates from the aminet. For more information go to the updates screen.

## 1.5 Installation

The program runs from anywhere as long as the directory contents are kept intact.

---

## 1.6 Requirements

To run GT Code Creator you need:-

- \* Gadtools.library
- \* Reqttools.library
- \* Blitz Basic v2.1
- \* GTMenu shared library
- \* Red Libs app library for the App functions

## 1.7 Usage

### Docs still in development. Sorry ###

You'll have to figure then options out for yourself. Its not really difficult ↔  
anyway.

I need some help for this. If anyone wants to help please let me know!!!

Tooltypes

SCREENMODEREQUEST Allows program to open on a custom screen. Makes the program ↔  
run  
faster with graphics.

## 1.8 Errors

- \* Crosshair is still a little flickery (Be fixed soon)
- \* Some options don't work with WinUAE
- \* No Items are added to the History menu

## 1.9 The Future

Things to be done: -

- \* Allow Localisation
- \* Allow all prefs to be edited with prefs menu
- \* Fix cross hair flicker
- \* Add support for GTMenuLib. (In development now)
- \* Allow Multiple windows.
- \* Update guide for how to use everything.
- \* Allow selection of tags in setting up gadgets. (In development now)
- \* Allow program to open on a public screen (Coming soon!!)
- \* Change project window so it actually has a GTList in it
- \* Allow WJam command with the text
- \* Change editing routine
- \* Get support from people
- \* Pass my A-Levels with this program being used for my computer science ↔  
coursework

More will appear all the time.

---

Registered users are entitled to a free updates. You can have them sent through E ↔  
-Mail or  
you can get them off the aminet. Please tell me when you're are registering.

## 1.10 White Star Software Address

I would prefer it if I could just be e-mailed instead but heres my address just ↔  
instead.

This is the address of White Star Software: -

Lee McCormick  
7 Burnside  
Esh Winning  
Co. Durham  
DH7 9NA  
ENGLAND

E-Mail: -

lee@wssoftwarelee.freemove.co.uk

URL: -

N/A yet

## 1.11 Disclaimer

If you computer software and hardware have problems with this program and then ↔  
doesn't  
work anymore then don't blame me. I wont take any responsibility for any problems ↔  
that  
have appeared since you have started using this program.

This program is SHARE|EMAILWARE. Please test the program or tell me what you ↔  
think or  
test for bugs to get registered.

## 1.12 Thanx

- \* Acid Software for Blitz Basic v2.1
  - \* Amiga International for creating the Amiga computer
  - \* Eyetech for my tower
  - \* David Wilson for his help in the earlier versions
  - \* David McMinn for his advice and help on all newer versions
  - \* The people who have BETA tested the program
  - \* All the people who are going to get registered for helping me.
-
