

Installation guide for Windows 95/98/2000/XP e Windows NT4

Thank you for choosing the Tele2Internet package.

This installation guide will guide you through the Tele2Internet setup procedure and explain the different options available.

The supplementary CD will install all necessary settings and setup your computer to connect to the Internet.

What you will need before starting the installation

- The Everyday.com CD.
- A modem connected to your computer and a phone line (if you use a modem to connect to the Internet).
- You might also need your Windows 95/98/2000/XP and NT4 CD if you have to install extra drivers.

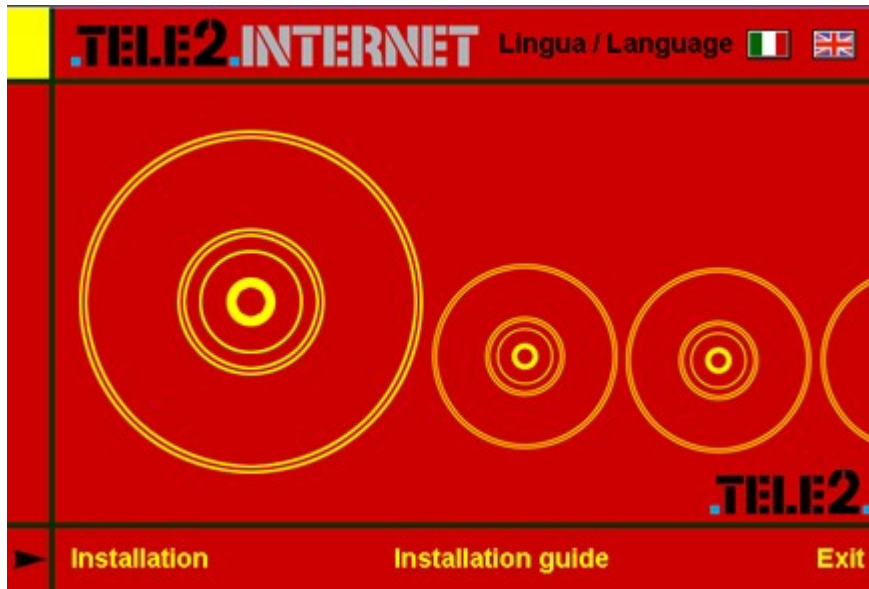

The complete installation consists of 2 steps

Step 1 Preparation and starting the CD.

Step 2 Installation and configuration of your system.

Step 1 – Preparation and Starting the CD

1. Start your computer. If you already have your computer started, please close all open applications.
2. Open your CD drive and insert the ETele2Internet CD.
3. Close the CD drive and wait for the Everyday.com window to appear on the screen.

The Tele2Internet Window.

When the Everyday.com window has appeared on the screen proceed to the section *The Main Window* on page 3.

Nothing happens when you insert the CD?

Some computers may not start an inserted CD automatically. If that is the case with your computer, try the following steps:

1. Repeat steps 1 and 2 above.
2. Double-click the *My Computer* icon on the desktop.

3. Double-click the CD symbol to view the contents of the CD.
4. In the window that appears on the screen, locate the file named **Install.exe** and double-click it to start the installation.

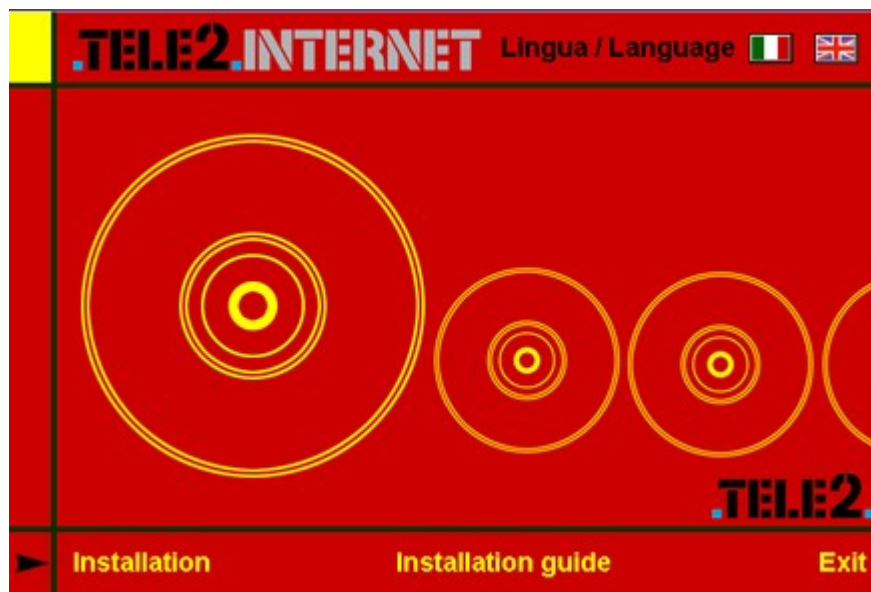

5. Wait until the Tele2Internet window appears on the screen (see above).

The Main Window

The figure below, shows the main Tele2Internet setup window. There are two main sections:

- Along the top you choose the language in which the install program will run.
- Along the bottom are the available installation options.

Before proceeding with the installation we will describe the different menu options.

The Main Window.

Installation

Select this option to continue the Tele2Internet installation process.

Installation guide

Select this option for detailed help in the installation process. A word processor will start on your computer and display the installation guide which contains the same information as this manual. You can read it online, or print it out.

Exit

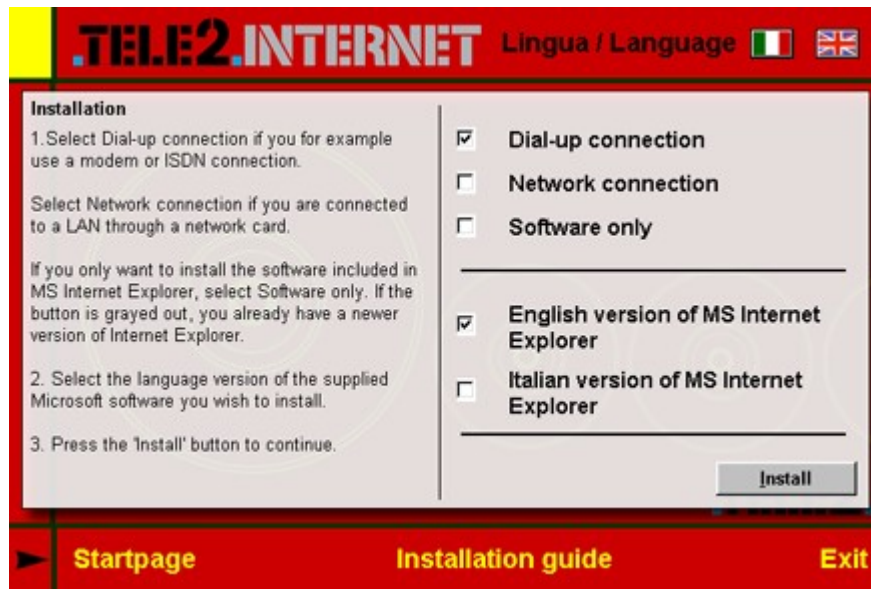

Select this to exit the installation program. You will be returned to the Windows 95/98/2000/XP and NT4 desktop.

Starting the Installation

1. Choose the language you want to read the instructions during the installation by pointing and clicking on one of the flags in the upper right corner of the screen
2. Point and click *Installation* in the lower left corner to continue.

Choosing connection type and software language version

This is where you select the manner in which you will connect to the Internet and which language version of MS Internet Explorer you want to use.

Choose connection type and software language version.

You have a few different options in this dialog box.

Dial-up connection

This is the most common method. Choose this if you are using a modem and a regular phone line to connect to the Internet. Also choose this dial-up connection method if you have an ISDN adapter.

Network connection

Choose Network connection if you are connected to a network through a network adapter.

Software only

Choose this alternative if you only want to install MS Internet Explorer 5 and additional Microsoft applications.

Language version of MS Internet Explorer

Use this option to select which language of MS Internet Explorer you want to install. We recommend you to choose the same language that you are using for Windows 95/98/2000/XP and NT4 in order to ensure all features work consistently.

Make your choices

1. Point and click the check-boxes to select the options you find suitable.
2. When you have selected your options, point and click the *Install* button in the lower right-hand corner to go to the next stage of the installation.

Windows NT 4 – Service Pack 3

In order to make a successful installation of MS Internet Explorer together with Windows NT 4, Service pack 3 or a later version must be installed already (Service Pack is an update for Windows NT). If you do not have Service Pack 3 (or a later version) a dialog box will appear in which you can choose to upgrade your system through the CD.

Step 2 – Installation and configuration of your system

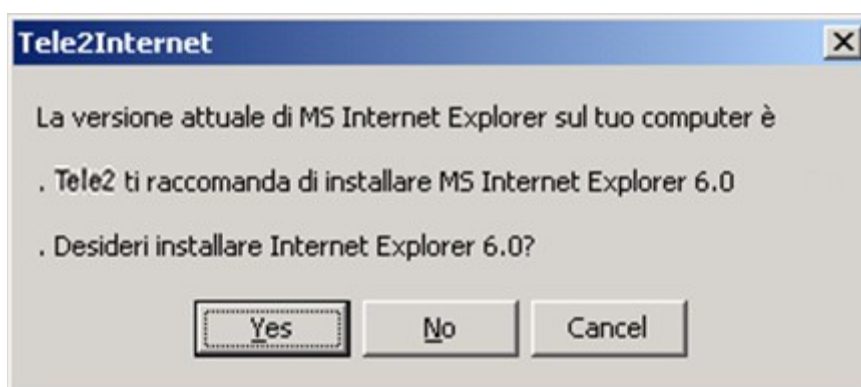

This section will install the Tele2Internet applications on your computer and make sure your Internet connection is properly configured. It will take you through the following steps:

- Installation of the required applications
- Configuration of the necessary network settings.
- If you selected a dial-up connection your modem will be configured.

The Installation program will determine if your computer already has been setup for an Internet connection. If this is the case, the installation program might skip some or all of the steps above.

Installing Microsoft Internet Explorer 6

MS Internet Explorer 6 is the application you will use to browse the Internet. If MS Internet Explorer 5 is installed on your computer, the following dialog box will appear:

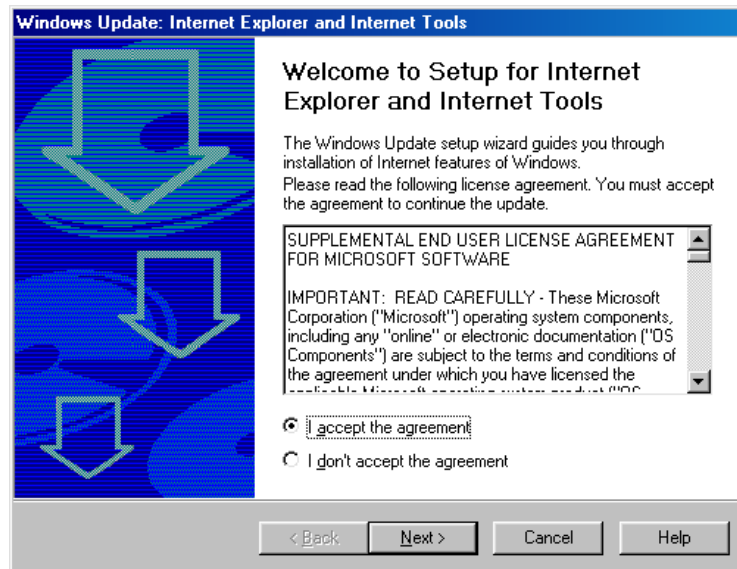

Choose *Yes* to proceed with the installation of MS Internet Explorer 6. If you choose *No* you will keep your existing version of MS Internet Explorer. If MS Internet Explorer 6 already is installed on your computer you will be asked whether you want to reinstall the application. We recommend that you keep the installed version unless you have been instructed to re-install it by Tele2Internet Internet Support staff.

If you choose *No* (i.e. not to install MS Internet Explorer) then proceed to the section *Installation of drivers* on page 11. Otherwise continue below.

License Agreement

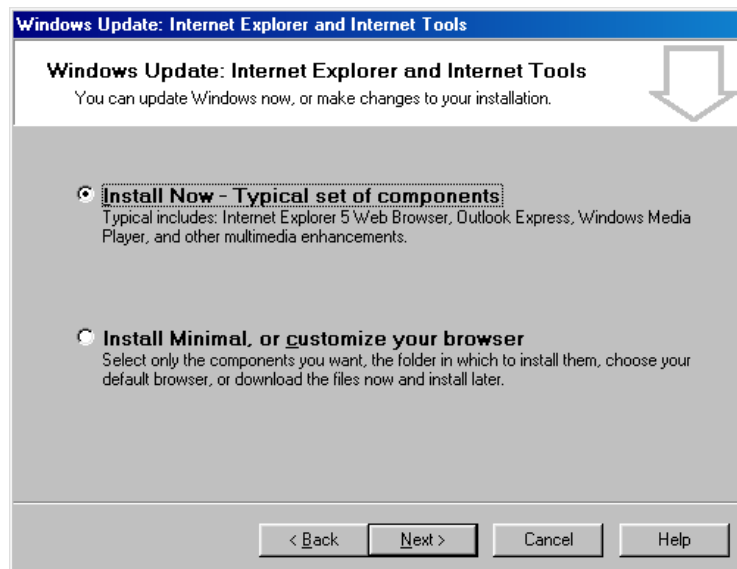

Read the License Agreement (you can scroll the window by clicking the up and down arrows next to the license text).

1. Point and click *I accept the agreement*.
2. Point and click *Next* to continue. A dialog box will appear a short moment before it is time to choose the kind of installation.

Installation Options

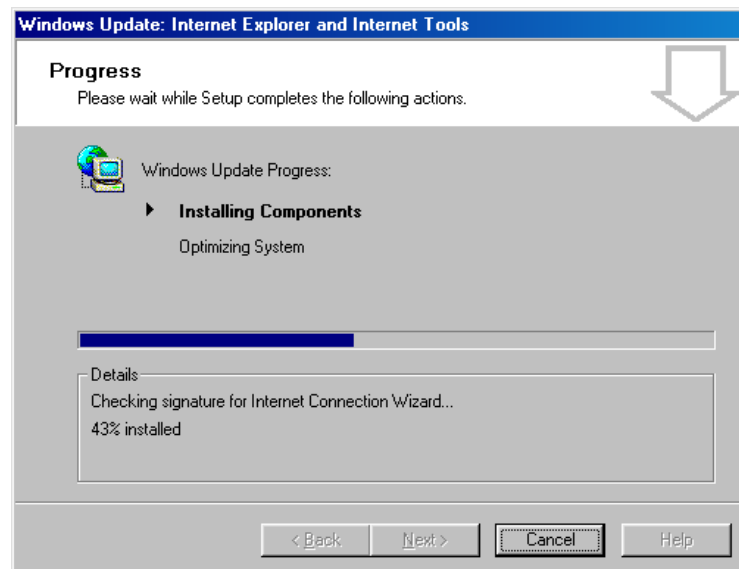

Here you can choose to do a typical installation which includes the most common components or a customized installation where you choose the components you want to install.

3. Point and click the option that you want to choose. We recommend *typical installation* (the alternative *Install Now*). (You can run the installation program again if you want to install more components later. The installation program will identify what is already installed and add new components only.)
4. Point and click *Next* to continue.

Installation

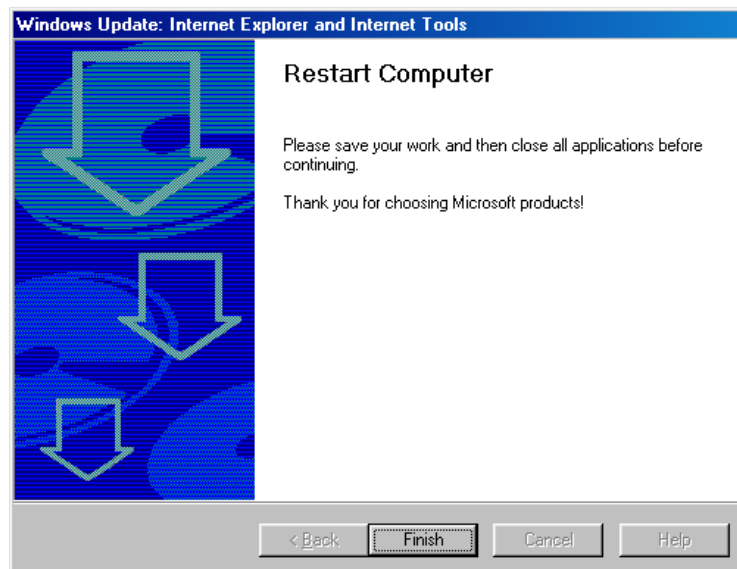

Internet Explorer will now be installed on your computer. This might take several minutes, depending on your computer's capacity. During this time the following dialog box will appear on the screen.

Restart

When the installation of Internet Explorer is complete your computer will need to be restarted.

Make sure there is no floppy disk in your disk drive.

5. Point and click *Finish* to continue.
6. Wait until your computer has restarted.

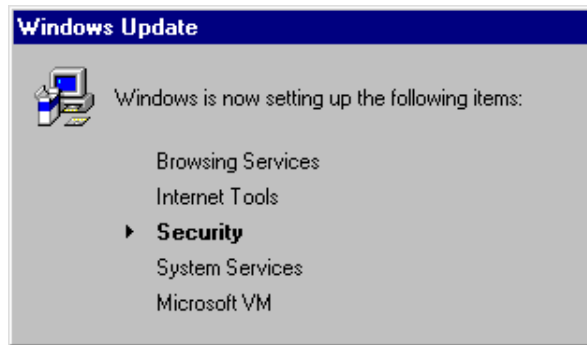

If your computer does not restart

If your computer doesn't shut down or restart when you have chosen *Finish* in the dialog box above, do the following.

- Point and click *Start* (the button at the bottom of the screen).
- Point and click *Shut Down*.
- Point and click at *Restart the computer*.
- Point and click OK.

Continuing the installation

When your computer has restarted the final components of MS Internet Explorer will be installed.

Your computer may need to install extra drivers in order for it to work properly with your dial-up connection. If this is the case, the installation program will continue below, otherwise proceed to the section *Modem installation* on page 15.

Installation of drivers – Windows 95/98

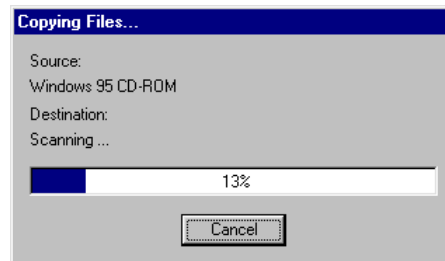

Below you will find how to install drivers for Windows 95/98. If you use Windows NT 4, proceed to the section *Installation of drivers – Windows NT 4* on page 13.

If you need to install extra drivers the following dialog box will appear:

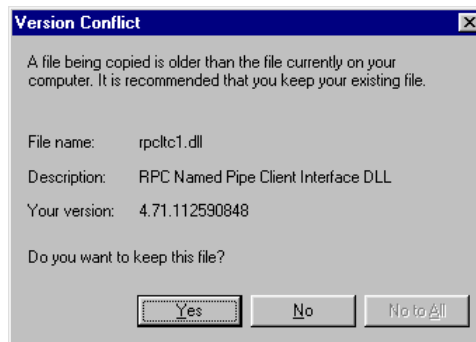

1. Point and click OK to continue.
2. Insert your Windows 95/98 installation CD if prompted.

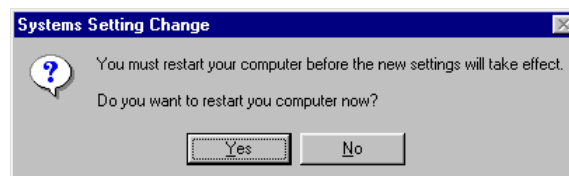

The required files will be copied to your computer.

3. If the following dialog box appears click *Yes* to continue.

4. If Windows prompts you to restart again, choose *Yes*.

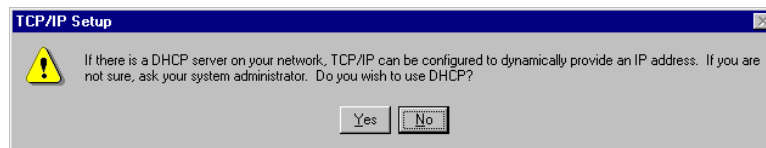

Installation of drivers – Windows NT 4

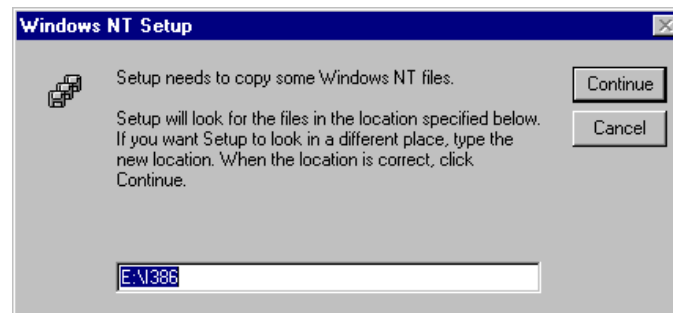

If you need to install extra drivers the following dialog box will appear:

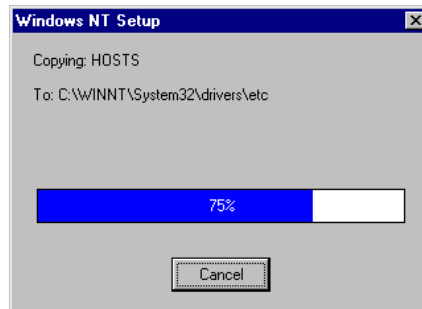

1. Point and click OK to continue.
2. If the following dialog box appears click *No* to continue.

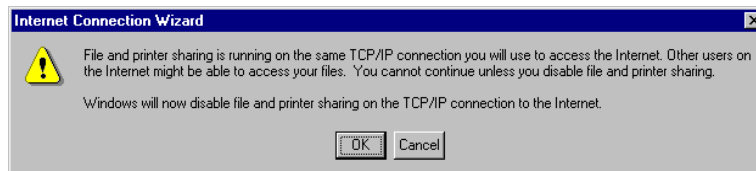

3. Insert your Windows NT 4 installation CD if prompted and click *Continue* to proceed.

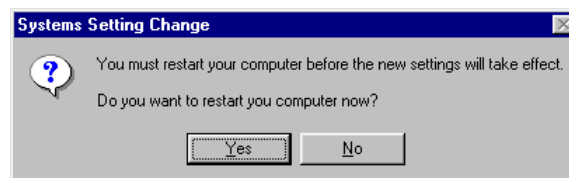

The required files will be copied to your computer.

4. If the following dialog box appears click OK to continue.

5. If Windows prompts you to restart again, choose *Yes*.

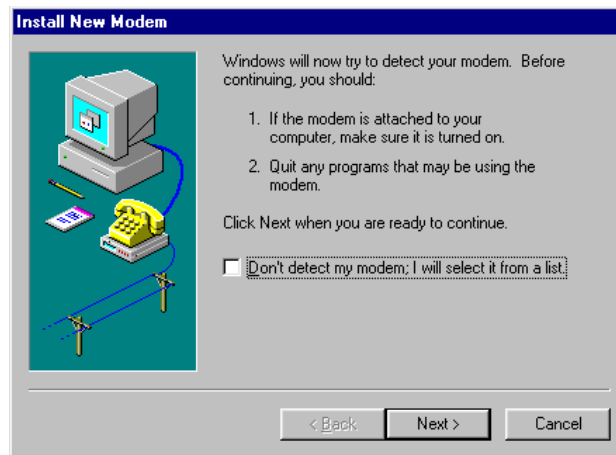

6. There will be a problem with Microsoft's Internet Explorer Isignup program. A dialogbox will pop up and report an error with Rasman.exe. Point and click the OK-button to restart. The installation will continue after restart.

Modem installation

If you have problems regarding the installation of your modem, please contact your modem provider.

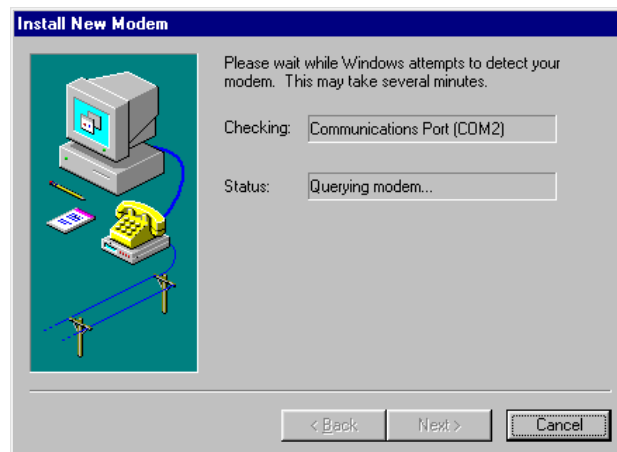

If you have chosen to use a modem to connect to the Internet and have not yet installed it, the installation program will now install it.

If your modem is a stand-alone external model make sure it is turned on, connected to your computer and that the phone-line is properly plugged into the modem and the telephone socket.

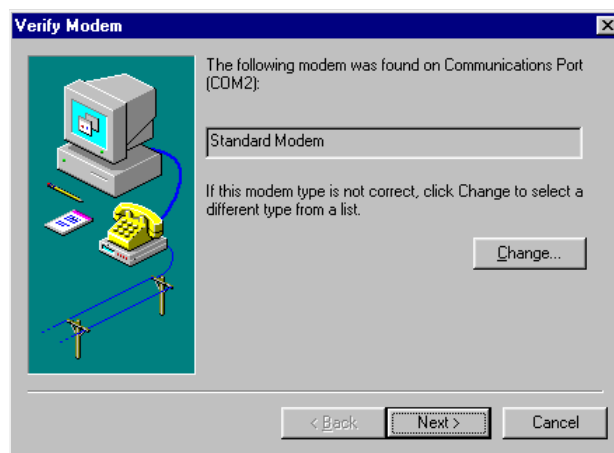

1. Point and click *Next* to install your modem.

The installation program will now search for the modem connected to your computer.

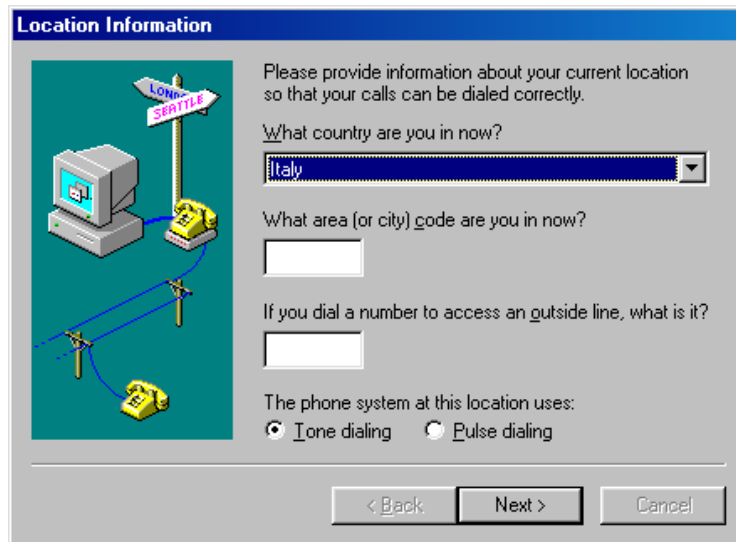

You will be presented with a suggestion when the installation program has found your modem.

2. Point and click *Next* to continue.

Now it is time to choose your location and telephone area code.

The dialog box is titled "Location Information" in a blue header bar. On the left, there is a cartoon illustration of a computer monitor, a telephone, and a street sign that says "LONG SEATTLE". A blue line representing a phone line connects the computer to the telephone. The main area of the dialog contains the following text and controls:

Please provide information about your current location so that your calls can be dialed correctly.

What country are you in now?
Italy (selected in a dropdown menu)

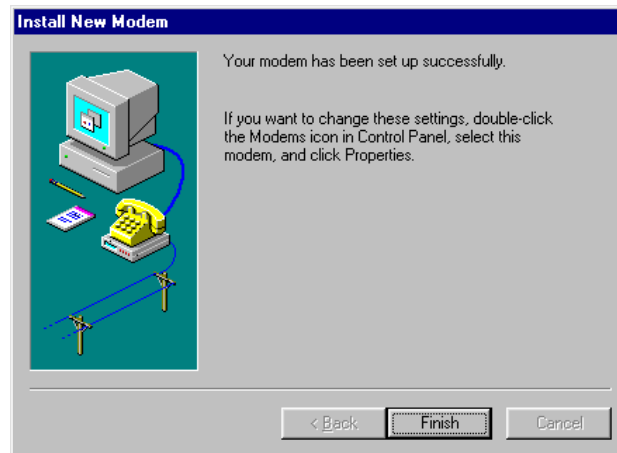

What area (or city) code are you in now?
[Empty text box]

If you dial a number to access an outside line, what is it?
[Empty text box]

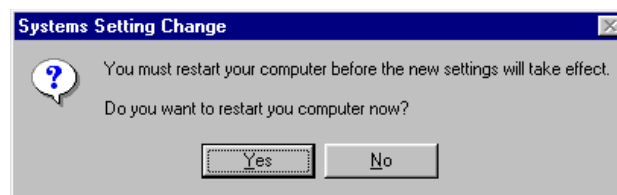

The phone system at this location uses:
☒ Tone dialing ☐ Pulse dialing

At the bottom, there are three buttons: "< Back", "Next >", and "Cancel".

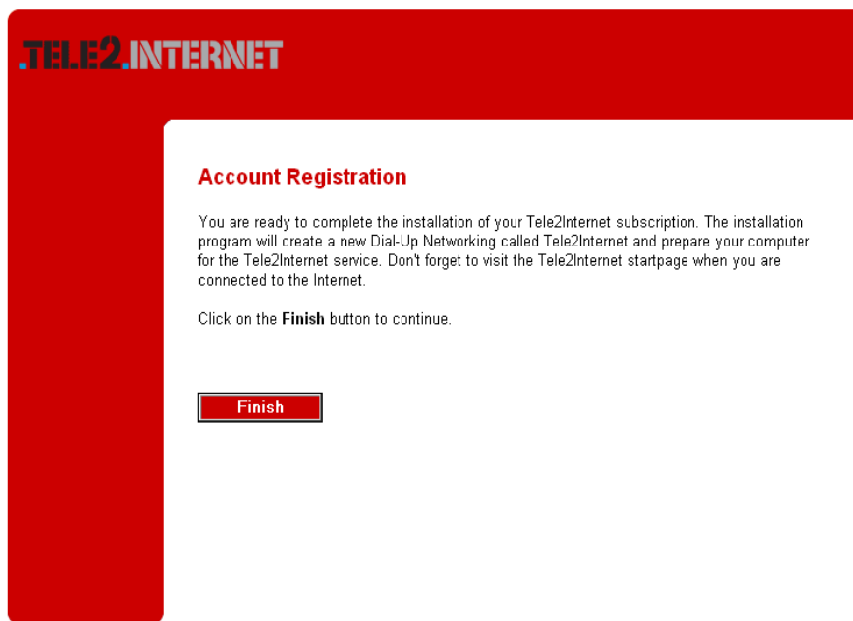

3. Point and click the down-arrow and select country where you live.
4. Point and click in the *area code* box and type your area code.
5. Skip the other choices and click *Next* to continue.
6. You will get a verification dialog box confirming that the installation is finished. Point and click *Finish* to end the installation.

7. If you get prompted to restart, press *Yes*.

8. Click on the Finish button to continue.

If your modem does not respond?

If your modem does not respond when you try to connect to the Internet, contact your modem provider.

Then, restart the account registration by choosing *Start, Program, Tele2Internet, Registrazione dell'account - Account Registration*.

Useful information.

You will find other useful features in the *Tele2Internet* folder such as links to web pages for support, manuals etc.
