

Introduction

CT Launcher is a small 32 bit program which places an icon in the Windows 95 taskbar tray. Right-clicking on this icon will bring up a menu of programs to launch. This menu is totally user configurable. You can add, edit, and remove items from the menu through the **CT Launcher Setup** program, which can be accessed by left-clicking on the taskbar icon.

When you first run the program, the **CT Launcher Setup** program will appear. When you click on the **Add** button, a dialog will appear that will allow you to add a program to the **CT Launcher** menu. The interface is quite simple to use. If you are not totally certain of what to enter where, simply use the program's context sensitive help to point you in the right direction.

Once you have completed adding a program to the menu, run **CT Launcher** again, and you're in business! The items you add to the menu will always appear in alphabetical order.

Trouble Shooting

In the unlikely event of **CT Launcher**'s menu information becoming corrupt, there is an easy out. From the **CT Launcher Setup** program, select **Delete All Entries** from the **Setup** menu. You can then simply re-enter your information.

Registration

CT Software
4510 E. Muriel Dr. - Phoenix, AZ 85032
USA
1-800-617-7740

This program is shareware, and, as such, may be used freely for a period of 30 days. If, after the 30 day evaluation period expires, you find this nifty little utility useful, and plan to continue using it, you are required to register the program.

By supporting the shareware concept you are helping to ensure its continuation, which, I think you'll agree, will benefit us all.

If you wish to register the program, we do accept AMERICAN EXPRESS. VISA and MASTER CARD. Our toll-free registration number is **1-800-617-7740**. The cost of registration is **\$12.00**. If you would like a copy of the program on diskette, there is an additional **\$3.00** shipping and handling charge.

If you prefer mail, please send a check in the amount of **\$12.00** to the above address. Be sure to include your name, address, e-mail address, and the exact name of the program, so that we can immediately send you the registration information. If you would like a copy of the program on diskette, there is an additional **\$3.00** shipping and handling charge.

If you are a **CompuServe** subscriber, the program can be registered on-line. Go SWREG - the SWREG# is **13687**. Upon receipt, a registration number will be e-mailed immediately.

Other Programs by CT Software

CT Calendar

CT Calendar is a small 32-Bit desktop calendar. We have tried to keep it small enough to keep on your desktop, but not so small that you need a magnifying glass to see it. It has many customizable features including color and loading position. This program is free of charge with the registration of any CT Software 32-bit shareware program.

CT HotSpot

CT HotSpot is a small utility with which you can create 2 hotspots - 1 to turn your screensaver on, and the other to turn it off. This can be quite useful when downloading a large file, doing a tape backup, or when using the Windows 95 utility, *DEFRAG*. Having a screensaver come on during any of these activities can wreck havoc with your computer and your files.

DiskCopy

DiskCopy is a simple little 32-Bit program for formatting and creating duplicate disks. **DiskCopy** will prompt you for the number of copies you have in mind, making for a very quick operation. **DiskCopy** does not perform an actual track by track copy, it simply copies the directory structure and files, but 99% of the time, that is all that is really required.

FormPost Edit

FormPost Edit is a special text editor for those of us who have to contend with posted Web forms. In addition to the many standard editing capabilities that the program has, its specialty is interpreting the extraneous characters contained in posted Web forms, turning them into easily readable text. Of course **FormPost Edit** can then either save or rename the form, as you wish, and also send it to your printer. In addition:

- 1.) **FormPost Edit** offers full font and color control, and will save your settings.
- 2.) FormPost Edit features a toolbar, complete with help balloons, which can be toggled on and off, as you wish.
- 3.) **FormPost Edit** will allow you to both print and save to a file selected text only, if desired. Simply select the text with the cursor before invoking the print or save as command, and only the selected text will be considered.

Notebook for Windows 95

There is one, and only one point to this program - to replace Notepad. **Notebook** is not a word processor. Its sole purpose is to view and edit text files. **Notebook** does have 6 major features (and several minor ones) which we believe make up for Notepad's inadequacies:

1. It will open **very large files**, and allow you to edit them.
2. It features full font control - you can set the font name, style, size, and color, and your settings will be saved when you exit the program. It will look better on your screen, and do a much better job of printing.
3. **Notebook** has a toolbar complete with help balloons.
4. **Notebook** features *DRAG AND DROP* text editing. If you want to move a block of text, just use the mouse to select it, and drag it to where you want it.
5. **Notebook** supports otype mode. While the default editing mode is insert, hitting the INSERT key on your keyboard will change that to otype.
6. **Notebook** can both print and/or save to a file **selected text only**, if desired.

Safety Net Pro

Safety Net Pro is a highly acclaimed utility for backing up key files by file extension. It has one default setting - to backup key "windows" and system files including INI files, Registry Files, CONFIG.SYS, and AUTOEXEC.BAT- and 5 user configurable options. **Safety Net Pro** could easily backup all of the document and/or database files on your drive, for example, with the directory structure **intact**, and it can Zip them to disk. **Safety Net Pro** has several advanced features that **Safety Net** lacks, including built-in 32-bit zip compression (PKZ v2.04 compatible) and the ability to span Zip files across multiple disks **Safety Net Pro** can also print file lists, print your directory tree, and make a boot disk.

Winsock Swapper

The purpose of **Winsock Swapper** is to automate the process of swapping various WINSOCK.DLL files for those of you who use more than one Internet service provider with your default Web Browser. With one quick double-click,

you can swap up to three DLL's, and optionally launch your browser. It doesn't get any easier than that!

YahtC

This game is a clone of the immensely popular game, Yahtzee. **YahtC** combines attractive 3D graphics with extreme ease of use. There are no complicated instructions, and no hidden forms. Each player's score is always visible. A sound card, while certainly not necessary, will greatly enhance the game, which produces sound effects when a player rolls the dice, "zeroes" out a scoring category, or rolls a "YahtC". The game will also keep a permanent record of High Scores, which can be easily cleared at any time. **YahtC** is fully functional, and supports up to 4 players.

ZipWorks

ZipWorks is a full featured 32 bit ZIP file manipulator for Windows 95. The built-in 32 bit compression is fully compatible with PKZIP v2.04. With this program you can ZIP, UnZip, add comments to your ZIP files, test archive integrity, and repair damaged ZIP files. This program can create files across multiple disks, and can store directory structure, making it a pretty fair choice for a backup utility, though its "cousin", Safety Net Pro, might be a little better suited for that purpose. There is an option in the Preferences dialog to associate ZipWorks with the file extension "ZIP". We highly recommend that you take advantage of this very useful feature, which will add 3 right-click menu items to your appropriate zip files in Explorer - open, UnZip, and UnZip To Path. The primary help engine for this program revolves around the context-sensitive help concept that Windows 95 makes such liberal use of.

Use your mouse to select the executable file that you want to add to the **CT Launcher** menu here. The file you select will appear in the text box at the bottom of the dialog.

Enter the name of the program you wish to add here exactly as you wish it to appear on the **CT Launcher** menu.

Enter the exact path of the program you wish to add here. If you are uncertain of the exact path, simply click on the **Browse** button to find the file.

When you click on the **Add** button, a dialog will appear that will allow you to add a program to the **CT Launcher** menu. The interface is quite simple to use. If you are not totally certain of what to enter where, simply use the program's context sensitive help to point you in the right direction.

The **Edit** function will allow you to change the name of an existing entry, or change the path to the file if you have moved it.

If you use your mouse to select a program in the list box, you can remove it from the **CT Launcher** menu by clicking [here](#).

Click here to close the **CT Launcher Setup** dialog.

All of the items you have added to the **CT Launcher** menu will appear here. Left-clicking on an item in the list will allow you to either edit or remove it from the list, double-clicking on an entry will invoke the **Edit** function of the program, and a right-click will unselect a selected item.

If the program you are adding to the menu accepts a command line, you can enter it here. For example, if you want to add Microsoft Access to your menu, and have Access open a particular database file upon loading, enter the path and name of the database file here.

Clicking on **Test** will do just that - it will attempt to run the program just as you have entered it. **Test** can be especially useful if you are uncertain whether the application you wish to add to **CT Launcher**'s menu will accept the command line you wish to add.

One, and only one **CT Launcher** menu item can be shown in bold face, in order to highlight it. Checking this box will cause that to happen.
