

## **Software required for StudioLine**

StudioLine runs on Microsoft Windows XP, Windows 2000, Windows NT4 SP5, Windows ME and Windows 98. Windows 95 is not supported.

To run, StudioLine requires three components by Microsoft, DCOM95, MDAC 2.5 or higher and Jet 4.0.

To display its online help, StudioLine requires Internet Explorer 4 (or higher).

To view web pages built with StudioLine, you'll need a browser capable of displaying dynamic HTML. Internet Explorer and Netscape display dynamic HTML with versions 4 and higher, Opera with version 5 and higher.

To display the tutorials, StudioLine requires Acrobat Reader by Adobe, version 3 or higher.

For your convenience, DCOM 95, MDAC 2.52, Jet 4.0 SP3, Internet Explorer 6, Netscape 7 and Adobe Acrobat Reader 5.0.5 are included on the StudioLine CD ROM. The download version of StudioLine offers links where these components or products can be downloaded.

StudioLine Setup determines which components and software products are missing from your PC and offers to install them. As soon as these installations are complete, StudioLine Setup will resume the installation of StudioLine itself.
