**EncryptOnClick** is a simple to use file encryption and decryption utility. It uses 256-bit AES encryption and compression that is compatible with WinZip 9 and Windows Explorer in XP/2003 (if you change the filename extension from .EOC to .Zip) [\[scroll down for more details\]](#)

To use EncryptOnClick on a USB key (with Windows XP or better) simply copy the following files to the USB device:

- EncryptOnClick.exe
- EncryptOnClick.exe.manifest
- XceedZip.dll

If you are not an Administrator then install to somewhere other than the **Program Files** folder, e.g. C:\EOC\, as you may not have the access rights to install software to that folder.
