**SyncBack** is a freeware file backup & synchronization program that can be used with hard drives, rewritable CD's & DVD's (formatted with UDF), removable media (e.g. Compact Flash), FTP servers, ZIP archives, and network shares. It's easy to use, but includes many options for the power user. **[ SCROLL DOWN for more... ]**

**SyncBackSE** is a greatly **enhanced** version of SyncBack freeware that can copy open files, perform faster backups, smart synchronisation, faster and better compression with AES encryption, and includes a new FTP engine that supports SSL/TLS encryption and MODE Z compression. For more information visit <http://www.SyncBackSE.com/>

**Upgrading:** There is no need to uninstall previous versions of SyncBack if you are upgrading. Just install to the same directory.

**Translations:** SyncBack is also available in a number of other languages, e.g. Chinese (Simplified and Traditional), Dutch, French, German, Italian, Polish, Portuguese, Spanish, Hungarian, and Catalan. You can download localised versions from <http://2brightsparks.com/downloads-int.html>
