Phrozen Crew history

The Quick and Dirty Story Behind The Group

(Thanks to The Keyboard Caper for providing a bio)

The Phrozen Crew, known to several people simply as PC. The biggest cracking group on the internet, yet its not the oldest. With over 45 members, and 4500+ cracks, no group comes close to PC's accomplishments. But PC isn't a simple born one day cracking group, **PC has history and lots of experience.** The Keyboard

Caper, one of the founders of The Phrozen Crew is a truly amazing person. Growing up in South Africa and also being deaf tKC rose up through the ranks of Hackers and Crackers fighting his way to being respected by many. The funny thing here, **PC started from Hacking.** tKC began learning from hackers, the one that made the break through was nicked Blade Runner, who taught tKC to be good with computers. Matter affect it wasn't until tKC started playing games did he got pissed at the copy protection and said to himself "why don't I crack these games?" And which began the legacy of PC was when tKC cracked his first program, a DOS game, which also lead to giving himself the nick "The Keyboard Caper".

Then in 1991 tKC heard of the BBS scene. The BBS scene showed him how big hacking was and how many cracks have already been made by whoever. He then got all the cracks he could get and learned from them the fine points of cracking.

And most of the cracks were made by the cracking group Razor 1911. Which tKC starting cracking more DOS games and utilities, mostly shareware he downloaded from BBSes. And soon he made and uploaded so many cracks, people began to take notice to him. Then the same person Blade Runner told tKC about another cracking group in South Africa named Masters of Terror (MoT). Masters of Terror was not liked by SA BBSes, because they seemed to cause lots of Chaos among the Bulletin Boards. Blade Runner told tKC, MoT was known for releasing illegal programs, reg'd keys, etc. tKC even goes to say " I remember how people fear them..... "

Blade Runners asks tKC how come he doesn't defeat them at their own game? Which tKC asks "How do I do that". Blade Runner gives tKC the hints and info needed to take on MoT. tKC explored the BBSes down there and eventually discovered MoT's WHQ BBS, which was a highly guarded secret among them. Under a false name tKC was able to log onto their system which he was able to make friend with some of the MoT members. What he found out was MoT was getting calls from over seas,

which tKC says was impossible at that time. And most of those over sea callers were RAZOR 1911 members. On the MoT BBS was where he meet Midi Maniac who was a SA Distro for RAZOR. MoT was where he also meet Aphex Twin (aka Kokey) whom both lived in SA like tKC. During that same time he meet a very Good Hacker who was nicked Acid Phreak, without tKC's knowledge it was really Aphex Twin. Acid Phreak ask tKC " Why don't you start your own BBS? " Which was when tKC gave birth to the BBS Wolfenstein, and what was special about tKC's BBS, was that he was the only SYSOP in South Africa, that was deaf, which tKC kept from the people. tKC's BBS grew to the biggest in SA it housed a large amount of cracks and the best shareware programs. tKC's BBS started with 20 to 30 calls a day. He was known as Dr. Wolfen. tKC didn't want people to know that he was tKC, so he simply went on as Dr. Wolfen. Several people contacted him as Dr. Wolfen wondering how to contact tKC, yet tKC went on to say "He's a good friend of mine!" tKC's BBS became very famous, several people called. tKC didn't even know what to do with himself. The MoT members called and fucked over his BBS, after several HD crashes tKC finally asked himself " Why don't I go fuck their WHQ bbs too?" It turned out MoT's system was the only UNIX based system in the whole SA. UNIX was hard to hack at first. But after awhile tKC learned UNIX and hacked their BBS,

logging in as tKC. He cause Chaos on MoT's system, then MASS mailed everybody on every BBS around telling that he was the first one to hack a UNIX system. MoT reacted by getting pissed and releasing a DEMO which told everybody that tKC was bad hacker/cracker and revealed his identity as Dr. Wolfen. People questioned tKC whether he really was Dr. Wolfen and tKC, but as Dr. Wolfen, tKC just told people that tKC was good friend of his. Which was where MoT dropped dead. Acid Phreak told tKC a lot about MoT, but since MoT was dead tKC didn't bother Acid Phreak about MoT any further. Acid Phreak was also the person that taught tKC how to make phone calls for free. Including how to make phone calls out of SA which tKC started making tele calls to the US for free, also got tKC to call lots of overseas BBSes. Acid Phreak then reveal he was also known as Aphex Twin and Kokey, which amazed tKC, because Acid Phreak was the biggest phreak king in South Africa. tKC then meet a person nicked Snake. Snake was a SA pirate that uploaded several games to tKC's BBS. Snake's BBS was also the first and only BBS that distributed games in SA. tKC then got involved with a program called Vision-X. Vision-X was a BBS program made by a Canadian nicked Ryec. V-X increased the calls to tKC's BBS. But now, Midi Manic and Aphex Twin called tKC's BBS finding out he was using V-X. They were pissed because tKC was using it for a Public BBS. They wanted to know where he got it from. tKC told them where he got V-X from and why he wanted to use it, but they told him to take down his BBS. They went as far as threatening him, they told him to take down his BBS and gave him a week to switch back to what he used before. tKC previously used RA and decided not to take any shit from them and kept V-X up. So after a week, they called tKC's BBS back, they were pissed, but they liked tKC and knew what he could do, nothing happened, but they feared the cops would bust tKC for using illegal BBS software. But in turn Midi Manic and Aphex Twin helped tKC make his BBS become the best public underground BBS with one of the largest collections of cracks, hacking stuff, and phreaking utils. For several months tKC cracked several programs and helped people crack other shareware programs. tKC also got a lot of hackers and crackers to connect with his BBS. But now where this story leads is where **Phrozen Crew began. Sometime in 1993** Aphex Twin contacts tKC to join The Phrozen Crew, back then in '93 PC was a hacking group. It was a highly underground group with 30+ members. tKC joined PC as a ANSI artist and a demo coder. During that time tKC was known as The Resetter. During that time tKC learned a lot more and phoned over seas a lot more. He made many friends with Razor 1911, ACiD, Hybrid, etc. tKC also meet the creator of V-X Ryec. Ryec then gave tKC free upgrades to the newest version of V-X which was a registered version. tKC even tried to hack V-X even though Ryec warned him it would fuck up his HD, which he learned the hard way. Ryec gave tKC the source code to V-X in Pascal to show tKC why hackers and crackers couldn't mess with V-X. But tKC could and had the knowledge to crack V-X, but had a good friendship with Ryec to where he respected Ryec's hardwork. But suddenly without any warning or reason in 1994 the Phrozen Crew group went dead. Which tKC continued to crack programs under his name tKC. tKC never created a group, he just wanted to make a big name for himself, but after a few months he thought he could do better if he started a group. tKC asked Aphex Twin if he could use Phrozen Crew and revive it as a Cracking group instead of a hacking group. **So in late 1994 Phrozen Crew was revived with tKC**, Lucido as a ANSI artist, Psylocke as a demo coder, Mutha as a musician. The PC then made many cracks, demos, ansi pics, vga pics, and eventually became the best cracking group in SA, defeating all the other SA groups. But tKC wanted more and in April 1996 tKC heard a lot about the Internet. Which then he started getting a lot of Ucf cracks. Reading a Ucf.NFO he learned he could contact Ucf using IRC. So he made his first attempt at IRC and meet UCF members. At that time tKC wondered why he should just quit Pc and join UCF, cause at that time UCF was the biggest cracking group in the world. But after a few weeks Psylocke pointed out to tKC why don't they start their own IRC

channel. So created #pc96 on irc, but PC wasn't well know to the public, and tKC spent most of the time hanging out in #cracking. tKC spent the time helping and cracking for other groups. tKC joined several cracking groups, whom he released cracks for, but still released cracks for PC, which the other groups didn't care for too much. tKC then asked the leader of Ucf at the time Marquis if he could distribute Ucf cracks on his site. tKC also contacted several other cracking groups to see if he could distro their cracks on his site. tKC's BBS grew bigger with tons of cracks online. That made the people of SA very happy. tKC was the only sysop who had 27 distro sites and 59 conferences online, which he got 250+ calls aday. tKC then went on to learn how to crack Windows programs using softice, learning how to debug. Suddenly like The Big Bang, IRC users drew their attention to tKC. From help from several people tKC recreated the PC IRC channel. tKC invited several people to joining PC. tKC leads to say, If it wasn't for people like TheBomb, ThatDude, MegaByte, PC couldn't of come as far as it has. Alien offered tKC the use bots for the PC channel. And after many months of hard work, **Phrozen Crew has become the largest and best cracking group on the internet and the World.** The Phrozen Crew mark is something that will be known as the best for a long long time, if not forever. And it is this that tKC wanted, it be know for something famous. Yet tKC meet a girl, which ultimately forced him to leave PC and IRC. She taught tKC the fine points of life, yet even thought tKC doesn't have direct involvement, he still continues to make apperences in the PC IRC channel.

Now days Phrozen Crew is know as pc98 and you can reach it at [Efnets IRC channel #PC98](#)

We ALWAYS get what we want!

OSCAR 8.0
Phrozen Crew 1998

What's OSCAR 8.0

Oscar is a Win95/NT database of Shareware serial numbers, .reg files, shareware URL. It also gives you the possibility of add your own serials to it.

OSCAR 8.0

Phrozen Crew 1998

Options Menu

[Yes/No] when exiting Oscar

If this checkbox option is enabled you will be prompted on exiting with a dialog box confirming if you really want to exit

Run WWW browser on URL Dbl.Click

If this checkbox option is enabled when you DoubleClick on Oscar shareware URL it will start your www browser. If not nothing will happen.

Save files to dir

If this checkbox option is enabled you will save all your files to a specified directory.

Path:

The directory you will save your files if Save files to dir option is enabled.

OSCAR 8.0

Phrozen Crew 1998

Enter registration

Name:

This field is for you to input the name of the program you want to enter

Registration:

This field is for you to input the registration code of the program you want to enter

The name/serials are keep in your windows directory (MyOwnOscar.ini).
You can give that file to your friends and they will use your database.

OSCAR 8.0

Phrozen Crew 1998

Save Files to directory

Oscar 8.0 brings some files to extract, because programs don't register always with serials. Some of the files are .reg files, that files must be extracted and then double click on them for the information that is inside those files be entered on Win registry. Usually I write in front of the file information what you need to do with it. Just follow the instructions. If everything fails try to place the file in the program dir or in your /windows dir.

OSCAR 8.0

Phrozen Crew 1998

Where can I find Phrozen Crew

You may find Phrozen Crew at Efnet IRC, channel #pc98

OSCAR 8.0
Phrozen Crew 1998

Due of many requests I've decided to write this tutorial how to crack Windows programs but this time I'll teach you how to use W32Dasm. I won't give you more details how to crack but it should help you mastering the cracking skills.

When using W32Dasm, it WON'T give you the serials or codes, it'll show you where/how to patch that you can enter any serial. And it's what I do everytime when I'm cracking programs, this tutorial will show you how I did in steps.

Sorry for my bad grammatical errors, I hope you'll understand this piece! :-)

TOOLS:

For tools you need the followings: (I use these tools, I assume you'll use 'em)
W32Dasm 8.5 or high version
Hacker's View 5.24
Norton Commander or Windows Commander (I'll explain later why I use this one)

Turbo Pascal 7.0
TASM and TLINK 3.0

Ask any crackers to get you these tools, they'll be happy to serve you! :-)

CONTENTS:

- 1) How to crack Quick View Plus 4.0
- 2) How to crack HEX WorkShop 2.51
- 3) How to make your own patchers

PART 1: Quick View Plus 4.0

- Step 1. Run ORDER32.EXE
- Step 2. Click on \$49 Single User License (You can click on \$59), then ACCEPT, then UNLOCK BY PHONE.
- Step 3. Enter any code to get the error message. (You should write down this message) and exit the program by clicking on CANCEL.
- Step 4. Run Norton Commander, go to QVP directory.
- Step 5. Copy ORDER32.EXE to ORDER32.EXX (for backup) and copy ORDER32.EXE to 1.EXE (for use by W32Dasm)
- Step 6. Run W32Dasm and disassemble 1.EXE.
- Step 7. Once it's disassembled, click STRING DATA REFERENCE, look down for the string "You have entered an incorrect code. Please check your entry" (You should remember that error message), double click on it.
- Step 8. Close SDR window, you should see the line:

```
* Possible reference to String Resource ID=00041: "You have entered...
:004049F8 6A29          push 00000029
:004049FA FF353CCE4000      push dword ptr [0040CE3C]
```

- Step 9. Ok, now you must look for the last comparison like CMP, JNE, JE, TEST, etc before the error string. Press UP arrow key till you find:

```
:004049CD 755A          jne 00404A29
* Possible reference to String Resource ID=00032: "You must select...
:004049CF 6A20          push 00000020
...
...
* Possible reference to String Resource ID=00040: "Unlock Error"
```

- Step 10. Now you know where it jumps to when you've entered the wrong code.

Now you want see if it will work when you replace "jne" with "je".
Make sure the green color bar is on :004049CD 755A jne 00404A29, you
should see Offset address below on the screen like @Offset 00003DCDh.
It's where you can patch it in ORDER32.EXE.

- Step 11. Go back to Norton Commander, run HIEW ORDER32.EXE, press F4 to select
Decode mode (ASM), press F5 and enter 3DCD. You should see like:

```
00003DCD: 755A                jne 000003E29
00003DCF: 6A20                push 020
00003DD1: FF15                call w,[di]
```

- Step 12. That's where you can change the bytes, press F3, enter 74, press F9 to
update ORDER32.EXE. Exit HIEW.

- Step 13. Run ORDER32.EXE, enter any code. Voila! You've cracked QVP 4.0!
Beware! What if you've enter the real serials? It'll jump to the error
message dialog! What now?

- Step 14. Run again HIEW ORDER32.EXE, press F4, select Decode, press F5 and
enter 3DCD. Press F3, enter EB, press F9. It'll jump directly to
Unlocked dialog.

PART 2: HEX WorkShop 2.51

- Step 1. Run HWORKS32.EXE
Step 2. Click on Help, About HEX Wo..
Step 3. Enter any code to get the error message. (You should write down this
message) and exit the program.
Step 4. Run Norton Commander, go to HWS directory.
Step 5. Copy HWORKS32.EXE to HWORKS32.EXX (for backup) and copy HWORKS32.EXE to
1.EXE (for use by W32Dasm)
Step 6. Run W32Dasm and disassemble 1.EXE.
Step 7. Once it's disassembled, click FIND TEXT, enter "You have entered an"
(You should remember that error message), find it. (You won't find it
at SDR window!)
- Step 8. Now you should see the line:

```
Name: DialogID_0075, # of Controls=003, Caption:"Registration Unsucce..
001-ControlID:FFFF, Control Class:""Control Text:"You have entered an..
002-ControlID:FFFF, Control Class:""Control Text:"Please confirm you..
```

- Step 9. Ok, now you know what ControlID it'll use when entering wrong codes,
Click FIND TEXT, enter "dialogid_0075" till you find:

```
* Possible reference to DialogID_0075
:0041E233 6A75                push 00000075
:0041E235 8D8D10FFFFFF          lea ecx, dword ptr [ebp+FF10]
```

- Step 10. Ok, now you must look for the last comparison like CMP, JNE, JE, etc
before the error dialog. Press UP arrow key till you find:

```
:0041E145 837DEC00              cmp dword ptr [ebp-14], 00000000
:0041E149 0F8479000000          je 0041E1C8
:0041E14F 8B8DFCFEFFFFFF        mov ecx, dword ptr [ebp+FEFC]
```

- Step 11. Now you want see if it will work when you replace "je" with "jne".
Make sure the green color bar is on :0041E149 0F8479000000 je 0041E1C8
You should see Offset address below on the screen like @Offset
0001D549h. It's where you can patch it in HWORKS32.EXE.

- Step 12. Go back to Norton Commander, run HIEW HWORKS32.EXE, press F4 to select

Decode mode (ASM), press F5 and enter 1D549. You should see like:

```
0001D549: 0F847900          je      00001D5C6  ----- (1)
0001D54D: 0000          add     [bx][si],al
0001D54F: 8B8DFCFE        mov     cx,[di][0FEFC]
```

Step 13. That's where you can change the bytes, press F3, enter 0F85, press F9 to update HWORKS32.EXE. Exit HIEW.

Step 14. Run HWORKS32.EXE and enter any code, does it work? NO?!?
Hehe, don't worry, go back to NC. Copy HWORKS32.EXX to HWORKS32.EXE.
(Now you see why I use EXX file for backup). Now go back to W32Dasm,
you should be there where you were (at 0041E145).

Step 15. Press F3 to search again for "dialogid_0075", you should find:

```
* Possible reference to DialogID_0075
:00430ADD 6A75          push  00000075
:00430ADF 8D8D10FFFFFF  lea    ecx, dword ptr [ebp+FF10]
```

Step 16. Ok, now you must look for the last comparison like CMP, JNE, JE, etc before the error dialog. Press UP arrow key till you find:

```
:004309EF 837DEC00          cmp    dword ptr [ebp-14], 00000000
:004309F3 0F8479000000      je     00430A72
:004309F9 8B8DFCFEFFFF      mov    ecx, dword ptr [ebp+FEFC]
```

Step 17. Now you want see if it will work when you replace "je" with "jne".
(It should work) Move the bar to :004309F3 0F8479000000 je 00430A72.
You should see Offset address below on the screen like @Offset
0002FDF3h. It's where you can patch it in HWORKS32.EXE.

Step 18. Go back to Norton Commander, run HIEW HWORKS32.EXE, press F4 to select Decode mode (ASM), press F5 and enter 2FDF3. You should see like:

```
0002FDF3: 0F847900          je      00001D5C6  ----- (1)
0002FDF7: 0000          add     [bx][si],al
0002FDF9: 8B8DFCFE        mov     cx,[di][0FEFC]
```

Step 19. That's where you can change the bytes, press F3, enter 0F85, press F9 to update HWORKS32.EXE. Exit HIEW.

Step 20. Run again HWORKS32.EXE and enter any code, does it work? Voila!!
Congratulations! You've cracked HEX WorkShop 2.51!

PART 3: Patchers

Here's the source code for Pascal:

```
-----<cut here>-----
Uses Crt;

Const A: Array[1..1] of Record {<----- 1 byte to be patched>
      A : Longint;
      B : Byte;
      End =
((A:$3DCD;B:$EB)); {<----- offset "3DCD" and byte "EB" to be changed}

Var Ch:Char;
    I:Byte;
    F:File;
    FN:file of byte;
```

```
Size:longint;
```

```
Begin
```

```

```

```
Assign(F,'ORDER32.EXE'); {<----- filename to be patched}
```

```
{SI-} Reset(F,1); {SI+}
```

```
If IOResult <> 0 then
```

```
begin
```

```
writeln('File not found!');
```

```
halt(1);
```

```
end;
```

```
For I:=1 to 1 do {<----- 1 byte to be patched}
```

```
Begin
```

```
Seek(F,A[I].A);
```

```
Ch:=Char(A[I].B);
```

```
Blockwrite(F,Ch,1);
```

```
End;
```

```
Writeln('File successfully patched!');
```

```
End.
```

```
-----<cut here>-----
```

```
Here's the source code for Assembler:

LAST WORDS:

Here are some general functions we use for cracking:

Hex:	Asm:	Means
75 or 0F85	jne	jump if not equal
74 or 0F84	je	jump if equal
EB	jmp	jump directly to
90	nop	no operation
77 or 0F87	ja	jump if above
0F86	jna	jump if not above
0F83	jae	jump if above or equal
0F82	jnae	jump if not above or equal
0F82	jb	jump if below
0F83	jnb	jump if not below
0F86	jbe	jump if below or equal
0F87	jnbe	jump if not below or equal
0F8F	jg	jump if greater
0F8E	jng	jump if not greater
0F8D	jge	jump if greater or equal
0F8C	jnge	jump if not greater or equal
0F8C	jl	jump if less
0F8D	jnl	jump if not less
0F8E	jle	jump if less or equal
0F8F	jnle	jump if not less or equal

Your little knowledge of assembly will help you more a bit, but you'll need it badly for Soft-ICE. Anyway you should easily crack pieces of shit using W32Dasm like a maniac :-) You CAN'T disassemble Visual Basic programs, therefore you need VB Decompilers which it works like shit.

Enough for now. Next time I'll tell you more how to use W32Dasm (Debugger Mode) and how to remove NAGS. Then after it, I'll write a tutorial for Soft-ICE 3.0. (Make my day!) :-)

Have fun,
The Keyboard Caper,
The Founder of PhRoZeN CRew '94 - '97
19-7-1997

OSCAR 8.0
Phrozen Crew 1998

Hi dudes!

Now I'm back at cracking tutorial, this time I would like to teach you how to remove NAGs and how to use Debugger Mode in W32Dasm, it's real easy!!

Sorry for my bad grammatical errors, I hope you'll understand this piece! :-)
Let's go!

TOOLS:

For tools you need the followings: (I use these tools, I assume you'll use 'em)
W32Dasm 8.9 or high version
Hacker's View 5.60
Norton Commander or Windows Commander (I'll explain later why I use this one)

Ask any crackers to get you these tools, they'll be happy to serve you! :-)

CONTENTS:

- 1) a. How to remove NAGs in Private EXE 2.0a (using Debugger in W32Dasm)
b. How to remove NAGs in Private EXE 2.0a (without W32Dasm!!)
- 2) a. How to remove NAGs in LView Pro 1.C/32 (using Debugger in W32Dasm)
b. How to crack LView Pro 1.C/32 (to enter any serials)

(Because of no modem here for a while I couldn't grab the latest shareware, so I use those old programs for demonstration.)

PART 1a: To remove NAGs in Private EXE 2.0a (with W32Dasm)

- Step 1. Run PEXE32.EXE
- Step 2. Now you see these annoying NAGs screen, you would like to remove this NAGs, right? :-)
- Step 3. Ok, exit the program.
- Step 4. Run Norton Commander, go to PrivateEXE directory.
- Step 5. Copy PEXE32.EXE to PEXE32.EXX (for backup) and copy PEXE32.EXE to 1.EXE (for use by W32Dasm)
- Step 6. Run W32Dasm and disassemble 1.EXE.
- Step 7. Once it's disassembled, click Debug|Load Process (or press CTRL-L).
- Step 8. Wait untill Debugger is finished with loading all the DLL's.
- Step 9. Ok, now you're at the 'debug' window, you should see the bar at:

```
:004074B0 mov eax, dword ptr fs: [00000000]
:004074B6 push ebp
...
...
```

- Step 10. It's where you're at Program Entry Point. Ok, you're ready to run Private EXE, click on RUN (or press F9). You should see these NAGs screen, you would like to know where it processes the NAGs. Click on Step Into (or press F7). Ah! Now you should see the following:

```
:00405C21 call USER32.DialogBoxParamA
:00405C27 pop ebp
...
...
```

- Step 11. Click on Terminate, it'll close Debugger and Private EXE windows.

- Step 12. You should be back at W32Dasm and see the following:

```

:00405C21 FF1590664100      Call dword ptr [00416690]
:00405C27 5D              pop ebp
:00405C28 C3              ret
...

```

Step 13. Ok, now you must check where it starts to process the dialogs. Press UP arrow key till you find:

```

:00405BFC CC              int 03
:00405BFD CC              int 03
:00405BFE CC              int 03

* Referenced by a (U)nconditional or (C)onditional Jump at Address:
|:00401064 (U)
|
:00405BFF 55              push ebp
:00405C00 8B442414         mov eax, dword ptr [esp+14]
...

```

Step 14. These CC's (int 03), it's where it starts to process the dialogs. Make sure the cyan color bar is on :00405BFF 55 push ebp You should see Offset address below on the screen like @Offset 00004FFFh. It's where you can patch it in PEXE32.EXE.

Step 15. Go back to Norton Commander, run HIEW PEXE32.EXE, press F4 to select Decode mode (ASM), press F5 and enter 4FFF. You should see like:

```

00005BFF: 55              push    ebp
00005C00: 8B442414         mov     eax,[esp][00014]
00005C04: 8BEC            mov     ebp,esp
00005C06: 85C0            test    eax,eax

```

(Remember, I'm using HIEW 5.60 now which it shows you diff offset address, and this version is awesome, grab it!!)

Step 16. That's where you can change the bytes, press F3, enter C3, press F9 to update PEXE32.EXE. When you've pressed F3 and entered C3, it should look like this:

```

00004FFF: C3              retn
00005000: 8B442414         mov     eax,[esp][00014]
00005004: 8BEC            mov     ebp,esp
00005006: 85C0            test    eax,eax

```

(Notice about offset address)

Step 17. Why C3? Ah, when the program starts here at C3 (retn), it won't continue with processing dialogs because you tell him to return back!

Step 18. Now run PEXE32.EXE, do you see those NAGs screen? Kewl!! You've cracked Private EXE 2.0a!!

BTW: this isn't 100% crack (to Bypass Password Protection), I show you only how to remove NAGs, remember? :-)

PART 1b: To remove NAGs in Private EXE 2.0a (without W32Dasm)

(I use this part alltime 'cos it's easier and faster)

Step 1. Run PEXE32.EXE

Step 2. Now you see these annoying NAGs screen, you would like to remove this

- Step 3. Ok, exit the program.
- Step 4. Run Norton Commander, go to PrivateEXE directory.
- Step 5. Copy PE32.EXE to PE32.EXX (for backup) and run HIEW PE32.EXE.
- Step 6. Press F4 to select HEX Mode, now you'll see HEX craps in PE32.EXE.
No need to pee your pants! :-)
- Step 7. Do you remember what the crap says in NAGs screen? Ah, you should write down these craps when running PE32.EXE. Like "PrivateEXE is NOT a free software. It is commercial.." or "Ok, I agree.." etc etc.

Step 9. Press F7 again, enter "a" (at ASCII), press DOWN arrow key, enter "00" (at HEX field), press UP arrow key, enter "g", press DOWN, "00", UP, "r", DOWN, "00", UP, "e", DOWN, "00", UP, "e". You should see the following:

Step 10. Ok, press ENTER to find these string. Now you'll see like this:

Step 11. Those "Ok, I agree", "Ordering" etc are buttons, now go down till you find:

Step 12. Look at FF FF FF FF 82 just before the string "PrivateEXE is NOT a.." It's where it'll generate dialogs, remember only 4 FF's and 82 bytes will do the tricks! Now use the arrows key to bring the cursor at "82" You'll see "19434" above the screen, now press F3 and change "82" to "7E", look above the screen, you're at Offset Address 14A34. It's where you can patch it. Press F9 to update PEXE32.EXE.

Step 14. Do you see those NAGs screen? Kewl!! You've cracked Private EXE 2.0a!!

PART 2a: To remove NAGs in LView Pro 1.C/32 (with W32Dasm)

- Step 1. Run LVIEWPRO.EXE
- Step 2. Now you see these annoying NAGs screen, you would like to remove this NAGs, right? :-)
- Step 3. Ok, exit the program.
- Step 4. Run Norton Commander, go to LView Pro directory.
- Step 5. Copy LVIEWPRO.EXE to LVIEWPRO.EXX (for backup) and copy LVIEWPRO.EXE to 1.EXE (for use by W32Dasm)
- Step 6. Run W32Dasm and disassemble 1.EXE.
- Step 7. Once it's disassembled, click Debug|Load Process (or press CTRL-L).
- Step 8. Wait untill Debugger is finished with loading all the DLL's.
- Step 9. Ok, now you're at the 'debug' window, you should see the bar at:

```
:00450236 mov eax, dword ptr fs: [00000000]
:0045023C push ebp
...
...
```

- Step 10. It's where you're at Program Entry Point. Ok, you're ready to run LView PRO, click on RUN (or press F9). You should see these NAGs screen, you would like to know where it processes the NAGs. Click on Step Into (or press F7). Ah! Now you should see the following:

```
:004324F1 cmp eax, FFFFFFFF
:004324F4 jne 00432508
...
...
```

- Step 11. Click on Terminate, it'll close Debugger and LView Pro windows.

- Step 12. You should be back at W32Dasm and see the following:

```
:004324F1 83F8FF          cmp eax, FFFFFFFF
:004324F4 7512             jne 00432508
...
```

- Step 13. Ok, now you must check where it starts to process the dialogs. Press UP arrow key till you find:

```
:004323ED CC          int 03
:004323EE CC          int 03
:004323EF CC          int 03

* Referenced by a CALL at Address:
|:00407EEC
|
:004323F0 83EC78          sub esp, 00000078
:004323F3 56             push esi
...
```

- Step 14. These CC's (int 03), it's where it starts to process the dialogs. Make sure the cyan color bar is on :004323F0 83EC78 sub esp, 00000078 You should see Offset address below on the screen like @Offset 000317F0h. It's where you can patch it in LVIEWPRO.EXE.

- Step 15. Go back to Norton Commander, run HIEW LVIEWPRO.EXE, press F4 to select Decode mode (ASM), press F5 and enter 317F0. You should see like:

```
.000323F0: 83EC78          sub     esp,078 ;"x"
.000323F3: 56             push    esi
```

```
.000323F4: 8BB42480000000    mov     esi,[esp][000000080]
.000323FB: 85F6                test    esi,esi
```

(Remember, I'm using HIEW 5.60 now which it shows you diff offset address, and this version is awesome, grab it!!)

Step 16. That's where you can change the bytes, press F3, enter C3, press F9 to update LVIEWPRO.EXE. When you've pressed F3 and entered C3, it should look like this:

```
000317F0: C3                retn
000317F1: EC                in      al,dx
000317F2: 7856              js      00003184A
000317F4: 8BB42480000000    mov     esi,[esp][000000080]
000317FB: 85F6              test    esi,esi
```

(Notice about offset address)

Step 17. Why C3? Ah, when the program starts here at C3 (retn), it won't continue with processing dialogs because you tell him to return back!

Step 18. Now run LVIEWPRO.EXE, do you see those NAGs screen? Kewl!! You've cracked LView Pro 1.C/32!!

And there is another way to remove those NAGs screen, wanna try this? Ok, go back to Step 1 and process those steps till Step 15, do the following steps:

Step 19. Now you're at 317F0 offset address, you would like to see where it calls this process. Press F6 to Refer (it'll find reference on current position), you should see like this:

```
.00007EEC: E8FFA40200        call    .0000323F0    ----- (6)
.00007EF1: 83C404            add     esp,004
.00007EF4: 33C0              xor     eax,eax
.00007EF6: E9320D0000        jmp     .000008C2D    ----- (7)
```

Step 20. Ah, now you know where it calls to process dialogs. Press F3, enter 9090909090, press F9 to update LVIEWPRO.EXE. When you've pressed F3 and entered 9090909090, it should look like this:

```
000072EC: 90                nop
000072ED: 90                nop
000072EE: 90                nop
000072EF: 90                nop
000072F0: 90                nop
000072F1: 83C404            add     esp,004
000072F4: 33C0              xor     eax,eax
```

Step 21. Those 9090909090 bytes will do that it won't call the process. Now run LVIEWPRO.EXE, do you see those NAGs screen? Kewl!! You've cracked LView Pro 1.C/32!!

PART 2b: How to crack LView Pro 1.C/32 (to enter any serials)

Step 1. Run LVIEWPRO.EXE

Step 2. Click on Registration, then I'll Register..., then at Name: enter "TKC/PC '97" and at ID#: enter "12345".

Step 3. You'll see the error message. (You should write down this message) and exit the program.

Step 4. Run Norton Commander, go to LVP directory.

Step 5. Copy LVIEWPRO.EXE to LVIEWPRO.EXX (for backup) and copy LVIEWPRO.EXE to 1.EXE (for use by W32Dasm)

Step 6. Run W32Dasm and disassemble 1.EXE.
 Step 7. Once it's disassembled, click STRING DATA REFERENCE, look down for the string "User name and ID numbers do not...".
 (You should remember that error message), double click on it.
 Step 8. Close SDR window, you should see the line:

```
* Possible StringData Ref from Data Obj -> "User name and ID numbers..
                                         -> "match, please verify if..

:0041ED7D 68188F4600      push 00468F18
:0041ED82 56              push esi
```

Step 9. Ok, now you must look for the last comparison like CMP, JNE, JE, TEST, etc before the error string. Press UP arrow key till you find:

```
:0041ED7B 751A          jne 0041ED97
* Possible StringData Ref from Data Obj -> "User name and ID numbers..
                                         -> "match, please verify if..

...
```

Step 10. Now you know where it jumps to when you've entered the wrong code. Now you want see if it will work when you replace "jne" with "je". Make sure the green color bar is on :0041ED7B 751A jne 0041ED97, you should see Offset address below on the screen like @Offset 0001E17Bh. It's where you can patch it in LVIEWPRO.EXE.

Step 11. Go back to Norton Commander, run HIEW LVIEWPRO.EXE, press F4 to select Decode mode (ASM), press F5 and enter 1E17B. You should see like:

```
.0001ED7B: 751A          jne .00001ED97 ----- (1)
.0001ED7D: 68188F4600      push 000468F18
.0001ED82: 56              push esi
```

Step 12. That's where you can change the bytes, press F3, enter 74, press F9 to update LVIEWPRO.EXE. Exit HIEW.

Step 13. Run LVIEWPRO.EXE, enter any code. Voila! You've cracked LVP 1.C/32!! Beware! What if you've enter the real serials? It'll jump to the error message dialog! What now?

Step 14. Run again HIEW LVIEWPRO.EXE, press F4, select Decode, press F5 and enter 1E17B. Press F3, enter EB, press F9. It won't jump to the error dialog!

Enough for now. I hope you've enjoyed this tutor too much as I did! :-)
 I'll see you next time at Tutor #3 for Soft-ICE 3.0!

Have fun,
 The Keyboard Caper,
 The Founder of PhRoZeN CRew '94 - '97
 6-8-1997

OSCAR 8.0
 Phrozen Crew 1998

Hi dudes!

I'm here in the hospital, nice nurses! :-) This time I would like to teach you how to crack time limit (or date expiration) and how to remove some NAGs. I know I've promised you to write a tutor about Soft-ICE but this time I couldn't because I don't have enough memory to run SI.
(I've only 8 meg RAM on LapTop) :-)

Sorry for my bad grammatical errors, I hope you'll understand this piece! :-)
Ok, let's go!

TOOLS:

For tools you need the followings: (I use these tools, I assume you'll use 'em)

W32Dasm 8.9 or high version (use FTP search: W32DSM89.ZIP)
Hacker's View 5.65 (E-mail: sen@suslikov.kemerovo.su)
FAR 1.40b (<ftp://ftp.elf.stuba.sk/pub/pc/utilfile/far140b.exe>) It's real nice!

Or ask any crackers to get you these tools, they'll be happy to serve you! :-)

CONTENTS:

- 1) a. How to remove NAGs in Horas 2.1a (without W32Dasm)
URL: <http://www.basta.com>
b. How to crack date expiration in Horas 2.1a (with W32Dasm)
URL: <http://www.basta.com>
- 2) a. How to crack date expiration in WinHacker95 2.0b3 (with W32Dasm)
URL: <http://www.wedgesoftware.com>
b. How to crack WinHacker95 2.0b3 (to enter any serials)
URL: <http://www.wedgesoftware.com>

(Because of no modem here for a while I couldn't grab the latest shareware, so I use those old programs for demonstration.)

PART 1a: To remove NAGs in Horas 2.1a (without W32Dasm)

(I use this part alltime 'cos it's easier and faster)

Step 1. Run HORAS.EXE

Step 2. Now you see these annoying NAGs screen, you would like to remove this NAGs, right? :-)

Step 3. Ok, exit the program.

Step 4. Run FAR, go to Horas directory.

Step 5. Copy HORAS.EXE to HORAS.EXX (for backup) and run HIEW HORAS.EXE.

Step 6. Press F4 to select HEX Mode, now you'll see HEX craps in HORAS.EXE.
No need to pee your pants! :-)

Step 7. Do you remember what the crap says in NAGs screen? Ah, you should write down these craps when running PEHE32.EXE. Like "Welcome to Horas" or "Horas is a shareware application. You are invited to.." etc etc.

Step 8. Press F7 to search, enter "welcome" (at ASCII field). Does it find the string? Ok, remember HORAS.EXE file is a 32bit program, so it'll use

"00" string between each letter like "w e l c o m e" (not space character between in!)

Step 9. Press F7 again, enter "w" (at ASCII), press DOWN arrow key, enter "00" (at HEX field), press UP arrow key, enter "e", press DOWN, "00", UP, "1", DOWN, "00", UP, "c", DOWN, "00", UP, "o", DOWN, "00", UP, "m", DOWN, "00", UP, "e". You should see the following:

[illegible]

Step 10. Ok, press ENTER to find these string. Now you'll see like this:

.000478C0:	06	00	00	00-00	00	DE	00-64	00	00	00-00	00	57	00		P	d	W				
.000478D0:	65	00	6C	00-63	00	6F	00-6D	00	65	00-20	00	74	00	e	l	c	o	m	e	t	
.000478E0:	6F	00	20	00-25	00	73	00-00	00	08	00-4D	00	53	00	o	%	s	M	S			
.000478F0:	20	00	53	00-61	00	6E	00-73	00	20	00-53	00	65	00	S	a	n	s	S	e		
.00047900:	72	00	69	00-66	00	00	00-00	00	02	50-00	00	00	00	r	i	f	P				
.00047910:	07	00	07	00-D0	00	30	00-84	69	FF	FF-82	00	25	00	D	0	"iiyy,	%				
.00047920:	73	00	20	00-69	00	73	00-20	00	61	00-20	00	73	00	s	i	s	a	s			
.00047930:	68	00	61	00-72	00	65	00-77	00	61	00-72	00	65	00	h	a	r	e	w	a	r	e
.00047940:	20	00	61	00-70	00	70	00-6C	00	69	00-63	00	61	00	a	p	p	l	i	c	a	
.00047950:	74	00	69	00-6F	00	6E	00-2E	00	20	00-20	00	59	00	t	i	o	n	.	Y		
.00047960:	6F	00	75	00-20	00	61	00-72	00	65	00-20	00	69	00	o	u	a	r	e	i		

Step 11. Look at FF FF 82 just before the string "%s is a shareware.." It's where it'll generate dialogs, remember only 2 or 4 FF's and 82 bytes

will do the tricks! Now use the arrows key to bring the cursor at "82" You'll see "4791C" above the screen, now press F3 and change "82" to "7E", look above the screen, you're at Offset Address 4191C. It's where you can patch it. Press F9 to update HORAS.EXE. Somebody has told me that you can change "82" to "90" in stead of "7E", 90 or 7E will do the same tricks.

Step 12. Remember only 4 FF's and 82 bytes will work otherwise you can fuck your arse. Sometimes 2 FF's and 82 bytes would work, now once you've changed "82" to "7E", it won't generate the dialogs. Exit HIEW and run HORAS.EXE.

Step 13. Do you see those NAGs screen? Kewl!! You've cracked Horas 2.1a!!

PART 1b: To crack date expiration in Horas 2.1a (with W32Dasm)

Step 1. Run HORAS.EXE

Step 2. You'll see the error message which it says that it has expired. (You should write down this message) and exit the program.

Step 3. Run FAR, go to Horas directory.

Step 4. Copy HORAS.EXE to HORAS.EXX (for backup) and copy HORAS.EXE to HORAS.W32 (for use by W32Dasm)

Step 5. Run W32Dasm and disassemble HORAS.W32.

Step 6. Once it's disassembled, click STRING DATA REFERENCE, look down for the string "The evaluation period for this product has expired. Please..". (You should remember that error message), double click on it.

Step 7. Close SDR window, you should see the line:

```
* Possible Reference to String Resource ID=25016: "The evaluation per..  
:0040C975 68B8610000      push 000061B8  
...
```

Step 8. Ok, press UP arrow key till you see:

```
* Referenced by a (U)nconditional or (C)onditional Jump at Addresses:  
|:0040C904 (C), :0040C918 (C), :0040C92D (C)  
|  
...
```

Step 9. Now press PgUp key 2 or 3 times till you see:

```
:0040C8F7 85C0          test eax, eax  
:0040C8F9 0F85BD000000    jne 0040C9BC  
:0040C8FF 8B4628          mov eax, dword ptr [esi+28]  
:0040C902 85C0          test eax, eax  
:0040C904 756B          jne 0040C971  
:0040C906 8B17          mov edx, dword ptr [edi]  
:0040C908 51            push ecx  
:0040C909 8BC4          mov eax, esp
```

Step 10. Look at 0040C904, do you remember that referenced addresses? Now look up till you find the last comparison like "test" or "jne" etc. Look at

0040C8F7, it's where it will jump to when it has expired. Let's try. Make sure the green color bar is on 0040C8F9 0F85BD000000 jne 0040C9BC and you should see Offset address below on the screen like @Offset 0000BCF9h. It's where you can patch it in HORAS.EXE.

Step 11. Go back to FAR, run HIEW HORAS.EXE, press F4 to select Decode mode (ASM), press F5 and enter BCF9. You should see like:

```
.0000C8F9: 0F84BD000000    je      .0000C9BC      ----- (1)  
.0000C8FF: 8B4628          mov     eax,[esi][00028]  
.0000C902: 85C0          test    eax,eax
```

Step 12. That's where you can change the bytes, press F3, enter 0F85, press F9 to update HORAS.EXE. Exit HIEW.

Step 13. Run HORAS.EXE, does it expire? Voila! You've cracked Horas 2.1a!!

PART 2a: To crack date expiration in WinHacker95 2.0b3 (with W32Dasm)

Step 1. Run WH95.EXE

Step 2. You'll see the error message which it says that it has expired, or else you'll have to register it. (You should write down this message) and exit the program.

Step 3. Run FAR, go to WH95 directory.

Step 4. Copy WH95.EXE to WH95.EXX (for backup) and copy WH95.EXE to WH95.W32 (for use by W32Dasm)

Step 5. Run W32Dasm and disassemble WH95.W32.

Step 6. Once it's disassembled, click STRING DATA REFERENCE, look down for the string "Your trial period is over!".
(You should remember that error message), double click on it.

Step 7. Close SDR window, you should see the line:

```
* Possible StringData Ref from Data Obj ->"Your trial peroid is over!"

:00429977 6844D34400          push 0044D344
:0042997C 8D8208020000          lea eax, dword ptr [edx+00000208]
:00429982 50                      push eax
```

Step 8. Ok, press UP arrow key till you see:

```
* Referenced by a (U)nconditional or (C)onditional Jump at Addresses:
|:004298AE (C)
|
...
```

Step 9. Now press PgUp key 4 or 5 times till you see:

```
:004298AE 0F82A1000000          jb 00429955
:004298B4 7517                  jne 004298CD
:004298B6 51                    push ecx
:004298B7 8D8208020000          lea eax, dword ptr [edx+00000208]
```

Step 10. Look at 004298AE, do you remember that referenced addresses? It's where it will jump to when it has expired. Let's find out.
Make sure the green color bar is on 004298AE 0F82A1000000 jb 00429955 and you should see Offset address below on the screen like @Offset 00028CAEh. It's where you can patch it in WH95.EXE.

Step 11. Go back to FAR, run HIEW WH95.EXE, press F4 to select Decode mode (ASM), press F5 and enter 28CAE. You should see like:

```
.000298AE: 0F82A1000000          jb      .000029955  ----- (1)
.000298B4: 7517                  jne     .0000298CD  ----- (2)
.000298B6: 51                    push    ecx
```

Step 12. That's where you can change the bytes, press F3, enter EB0090909090, press F9 to update WH95.EXE. Those EB00 will say not to jump but to continue on next line, and those 90909090 will make them NOP, got it? Exit HIEW.

Step 13. Run WH95.EXE, does it expire? Voila! You've cracked WH95 2.0b3!!

PART 2b: How to crack WH95 2.0b3 (to enter any serials)

Step 1. Run WH95.EXE

Step 2. Enter "TKC/PC '97" at Name, at Company: "PC '97", and Serial: "12345" and click on Register.

Step 3. You'll see the error message. (You should write down this message) and

exit the program.

Step 4. Run FAR, go to WH95 directory.

Step 5. Copy WH95.EXE to WH95.EXX (for backup) and copy WH95.EXE to WH95.W32 (for use by W32Dasm)

Step 6. Run W32Dasm and disassemble WH95.W32.

Step 7. Once it's disassembled, click STRING DATA REFERENCE, look down for the string "Invalid Serial Number!".
(You should remember that error message), double click on it.

Step 8. Close SDR window, you should see the line:

```
* Possible StringData Ref from Data Obj ->"Invalid Serial Number!"

:00429719 68E0D24400          push 0044D2E0
:0042971E 8D4DF0             lea ecx, dword ptr [ebp-10]
...
```

Step 9. Ok, now you must look for the last comparison like CMP, JNE, JE, TEST, etc before the error string. Press UP arrow key till you find:

```
:004296FB 7474             je 00429771
:004296FD 8B4DF0             mov ecx, dword ptr [ebp-10]
:00429700 C7416C00000000     mov [ecx+6C], 00000000
...
```

Step 10. Now you know where it jumps to when you've entered the wrong code. Let's see if it will work when we replace "je" with "jne" or with "eb". Make sure the green color bar is on :004296FB 7474 je 00429771, you should see Offset address below on the screen like @Offset 00028AFBh. It's where you can patch it in WH95.EXE.

Step 11. Go back to FAR, run HIEW WH95.EXE, press F4 to select Decode mode (ASM), press F5 and enter 28AFB. You should see like:

```
.000296FB: 7474             je      .000029771  ----- (1)
.000296FD: 8B4DF0             mov     ecx,[ebp][-0010]
.00029700: C7416C00000000     mov     d,[ecx][0006C],00000000
```

Step 12. That's where you can change the bytes, press F3, enter EB, press F9 to update WH95. Exit HIEW.

Step 13. Run WH95.EXE, enter any code. Does it work? Don't pee, let's continue.

Step 14. Run WH95.EXE again.

Step 15. Enter "TKC/PC '97" at Name, at Company: "PC '97", and Serial: "12345" and click on Register.

Step 16. You'll see another error message. (You should write down this message) and exit the program.

Step 17. Go back to W32Dasm, click STRING DATA REFERENCE, look down for the string "Error 1000: Invalid Serial Number!".
(You should remember that error message), double click on it.

Step 18. Close SDR window, you should see the line:

```
* Possible StringData Ref from Data Obj ->"Error 1000: Invalid Serial.."
```

```

:004229C3 686CCE4400          push 0044CE6C
:004229C8 E8C3030000          call 00422D90
...

```

Step 19. Ok, now you must look for the last comparison like CMP, JNE, JE, TEST, etc before the error string. Press UP arrow key till you find:

```

:004229BC 7424          je 004229E2
:004229BE 6A3B          push 0000003B
:004229C0 8B4DEC          mov ecx, dword ptr [ebp-14]
...

```

Step 20. Now you know where it jumps to when you've entered the wrong code. Let's see if it will work when we replace "je" with "jne" or with "eb". Make sure the green color bar is on :004229BC 7424 je 004229E2, you should see Offset address below on the screen like @Offset 00021DBCh. It's where you can patch it in WH95.EXE.

Step 21. Go back to FAR, run HIEW WH95.EXE, press F4 to select Decode mode (ASM), press F5 and enter 21DBC. You should see like:

```

.000229BC: 7424          je      .0000229E2  ----- (1)
.000229BE: 6A3B          push    03B
.000229C0: 8B4DEC          mov     ecx,[ebp][-0014]

```

Step 22. That's where you can change the bytes, press F3, enter EB, press F9 to update WH95. Exit HIEW.

Step 23. Run WH95.EXE, enter any code. Voila! You've cracked WH95 2.0b3!!

Ok, enough for now. I hope you've enjoyed this tutor too much as I did! :-)
I'll see you next time at Tutor #4!

Have fun,
The Keyboard Caper,
The Founder of PhRoZeN CRew '94 - '97
27-8-1997

OSCAR 8.0
Phrozen Crew 1998

Hi ya dudes!

Long time no tutor in 4 months! Phew, but as you can see I'm back to the cracking scene (yea I'm back in PC, aren't you happy? :-)) Ok, let's rock, in this tutor I'll teach you how to remove timeout limits and how to enable crippled features in some apps (and how to register your babe :-))

(No SoftIce, still my little ol' laptop :-)) In the next tutor #5 we'll talk about IDA (Interactive Disassembler, it r0x!!)

Sorry for my bad grammatical errors, I hope you'll understand this piece! :-)
Ok, let's go!

TOOLS:

For tools you need the followings: (I use these tools, I assume you'll use 'em)

W32Dasm 8.9 or high version (use FTP search: W32DSM89.ZIP)
Hacker's View 5.66 (E-mail: sen@suslikov.kemerovo.su)
FAR 1.50b (<ftp://ftp.elf.stuba.sk/pub/pc/utilfile/far140b.exe>) It's real nice!
or use Windows Commander 3.50 áeta 5 in stead of FAR (<http://www.ghisler.com>)

Ask any crackers to get you these tools, they'll be happy to serve you! :-)

CONTENTS:

- 1) a. How to crack Date Expiration in System Cleaner 1.21 (with W32Dasm)
URL: <http://infortech.reedcs.com>
b. How to bypass NAG about Invalid Date in System Cleaner 1.21 (w/W32Dasm)
URL: <http://infortech.reedcs.com>
- 2) How to enable crippled features in Macro Scheduler 4.3.11 (with W32Dasm)
URL: <http://www.mjtnet.com>
- 3) How to crack TrayCal 1.0 (to enter any codes)
URL: <http://www.spaeder.com>
- 4) Why I copy *.EXE to *.W32 files
- 5) ASM Source Code for a Patcher by Nop/PC '97

PART 1a: To crack Date Expiration in System Cleaner 1.21 (with W32Dasm)

Step 1. Run SystemCleaner.EXE

Step 2. You'll see the error message which it says that it has expired. (You should write down this message) and exit the program.

Step 3. Ok, exit the program.

Step 4. Run WC, go to System Cleaner directory.

Step 5. Copy SystemCleaner.EXE to SystemCleaner.EXX (for backup) and copy SystemCleaner.EXE to SystemCleaner.W32 (for use by W32Dasm)

Step 6. Run W32Dasm and disassemble SystemCleaner.W32

Step 7. Once it's disassembled, click STRING DATA REFERENCE, look down for the string "The trial period has ended. Please..".
(You should remember that error message), double click on it.

Step 8. Close SDR window, you should see the line:

```
:00464BB6 668B0DE44B4600      mov cx, word ptr [00464BE4]
```

```
:00464BBD B202          mov dl, 02
```

* Possible StringData Ref from Code Obj ->"The trial period has ended. Please "
->"register this software!"

Step 9. Ok, press UP arrow key till you see:

```
:00464BA8 53          push ebx
:00464BA9 8BD8          mov ebx, eax
:00464BAB 80BB0C01000000    cmp byte ptr [ebx+0000010C], 00
:00464BB2 741C          je 00464BD0
:00464BB4 6A00          push 00000000
```

* Referenced by a (U)nconditional or (C)onditional Jump at Address:
|:00464B4F(C)

Step 10. Look above at Referenced Jump at 00464B4F(C), press PgUp key 2 or 3
times till you see:

```
:00464B4F 7065          jo 00464BB6
```

And look below till you see:

```
:00464B54 64          BYTE 064h
```

If you see the string "BYTE xxxh", ignore it!! It's not a real jump,
it's only strings, ok go back to 00464BA8 address. Now you'll find a
comparison, look at 464BB2, it's where it will jump to when it has
expired. Let's try.

Make sure the green color bar is on 00464BB2 741C je 00464BD0
and you should see Offset address below on the screen like @Offset
00063FB2h. It's where you can patch it in SystemCleaner.EXE.

Step 11. Go back to WC, run HIEW SYSTEM~1.EXE, press F4 to select Decode mode
(ASM), press F5 and enter 63FB2. You should see like:

```
.00064BB2: 741C          je .000064BD0 ----- (1)
.00064BB4: 6A00          push 000
.00064BB6: 668B0DE44B4600 mov cx,[000464BE4]
```

Step 12. That's where you can change the bytes, press F3, enter EB, press F9
to update SYSTEM~1.EXE. Exit HIEW.

Step 13. Run SystemCleaner.EXE, does it expire? Voila! You've made it!!

PART 1b: To bypass NAG about Invalid Date in System Cleaner 1.21 (with W32Dasm)

(This is used only if you changed Date to 12/25/98 for example and changed back
to 12/25/97, and you'll see a NAG which it says "The system clock has been
moved back. Please reset system clock to correct blah blah")

Step 1. Run SystemCleaner.EXE

Step 2. You'll see the error message which it says that your date is fucked up,
and you should write down this message) and exit the program.

Step 3. Ok, exit the program.

Step 4. Run WC, go to System Cleaner directory.

Step 5. Copy SystemCleaner.EXE to SystemCleaner.EXX (for backup) and copy
SystemCleaner.EXE to SystemCleaner.W32 (for use by W32Dasm)

Step 6. Run W32Dasm and disassemble SystemCleaner.W32

```
:00448AED B860954400      mov eax, 00449560
```

Step 8. Ok, press UP arrow key till you see:

```
:00448ACA 7530          jne 00448AFC
:00448ACC 8B8370020000     mov eax, dword ptr [ebx+00000270]
:00448AD2 8B80FC000000     mov eax, dword ptr [eax+000000FC]
:00448AD8 8B10          mov edx, dword ptr [eax]
:00448ADA FF5210         call [edx+10]
:00448ADD 83F813         cmp eax, 00000013
:00448AE0 7E1A          jle 00448AFC
:00448AE2 6A00          push 00000000
```

Step 9. Look at 00448ACA and 00448AE0 addresses. It's where it will jump to when it complains. Let's find out.

Make sure the green color bar is on 00448ACA 7530 jne 00448AFC
and you should see Offset address below on the screen like @Offset
00047ECAh. It's where you can patch it in MSCHED.EXE.

Step 10. Go back to WC, run HIEW MSCHED.EXE, press F4 to select Decode mode (ASM), press F5 and enter 47ECA. You should see like:

```
.00048ACA: 7530          jne .000048AFC ----- (1)
.00048ACC: 8B8370020000     mov     eax,[ebx][000000270]
.00048AD2: 8B80FC000000     mov     eax,[eax][0000000FC]
.00048AD8: 8B10          mov     edx,[eax]
.00048ADA: FF5210         call    d,[edx][00010]
.00048ADD: 83F813         cmp     eax,013
.00048AE0: 7E1A          jle     .000048AFC ----- (2)
```

Step 11. That's where you can change the bytes, press F3, enter EB and go below till 7E1A (offset 47EE0), enter EB and press F9 to update MSCHED.EXE.
Exit HIEW.

Step 12. It's not done yet! Open SDR window and double click on "Unregistered copies.." again.

Step 13. Close SDR window, you should see the line:

```
* Possible StringData Ref from Code Obj ->"Unregistered copies of Macro.."
                                         ->"have a limit of 20 lines per.."
```

```
:0044DB9E B86CDC4400      mov eax, 0044DC6C
```

Step 14. Ok, press UP arrow key till you see:

```
:0044DB7D 752C          jne 0044DBAB
:0044DB7F 8B83D4090000     mov eax, dword ptr [ebx+000009D4]
:0044DB85 8B80FC000000     mov eax, dword ptr [eax+000000FC]
:0044DB8B 8B10          mov edx, dword ptr [eax]
:0044DB8D FF5210         call [edx+10]
:0044DB90 48             dec eax
:0044DB91 7E18          jle 0044DBAB
```

Step 15. Look at 0044DB7D and 0044DB91 addresses. It's where it will jump to when it complains. Let's find out.

Make sure the green color bar is on 0044DB7D 752C jne 0044DBAB
and you should see Offset address below on the screen like @Offset
0004CF7Dh. It's where you can patch it in MSCHED.EXE.

Step 16. Go back to WC, run HIEW MSCHED.EXE, press F4 to select Decode mode (ASM), press F5 and enter 4CF7D. You should see like:

```

.0004DB7D: 752C                jne     .00004DBAB  ----- (1)
.0004DB7F: 8B83D4090000        mov     eax,[ebx][0000009D4]
.0004DB85: 8B80FC000000        mov     eax,[eax][000000FC]
.0004DB8B: 8B10                mov     edx,[eax]
.0004DB8D: FF5210              call    d,[edx][00010]
.0004DB90: 48                  dec     eax
.0004DB91: 7E18                jle     .00004DBAB  ----- (2)

```

Step 17. That's where you can change the bytes, press F3, enter EB and go below till 7E18 (offset 47F91), enter EB and press F9 to update MSCHEX.EXE. Exit HIEW.

Step 18. Not done yet! Open SDR window and double click on "Unregistered copies.." again.

Step 19. Close SDR window, you should see the line:

```

* Possible StringData Ref from Code Obj ->"Unregistered copies of Macro.."
  ->"have a limit of 20 lines per.."

```

```

:00450D3F B8001D4500        mov     eax, 00451D00

```

Step 20. Ok, press UP arrow key till you see:

```

:00450D21 74CC                je      00450CEF
:00450D23 8BC7                mov     eax, edi
:00450D25 E86635FBFF        call    00404290
:00450D2A E8C919FBFF        call    004026F8
:00450D2F 83FB14              cmp     ebx, 00000014
:00450D32 7E1A                jle     00450D4E

```

Step 21. Look at 00450D32 address. It's where it will jump to when it complains again, let's find out.

```

Make sure the green color bar is on 00450D32 7E1A      jle 00450D4E
and you should see Offset address below on the screen like @Offset
00050132h. It's where you can patch it in MSCHEX.EXE.

```

Step 22. Go back to WC, run HIEW MSCHEX.EXE, press F4 to select Decode mode (ASM), press F5 and enter 4CF7D. You should see like:

```

.00050D32: 7E1A                jle     .000050D4E  ----- (4)
.00050D34: 6A00                push    000
.00050D36: 668B0DF41C4500      mov     cx,[000451CF4]

```

Step 23. That's where you can change the bytes, press F3, enter EB and press F9 to update MSCHEX.EXE. Exit HIEW.

Step 24. It's not done yet! (one more :-)) Open SDR window and double click on "Unregistered copies.." again.

Step 25. Close SDR window, you should see the line:

```

* Possible StringData Ref from Code Obj ->"Unregistered copies of Macro.."
  ->"have a limit of 20 lines per.."

```

```

:00452D25 B8E82F4500        mov     eax, 00452FE8

```

Step 26. Ok, press UP arrow key till you see:

```

:00452D01 7531                jne     00452D34
:00452D03 8B45FC              mov     eax, dword ptr [ebp-04]
:00452D06 8B80D4090000        mov     eax, dword ptr [eax+000009D4]

```

```

:00452D0C 8B80FC000000      mov eax, dword ptr [eax+000000FC]
:00452D12 8B10                    mov edx, dword ptr [eax]
:00452D14 FF5210          call [edx+10]
:00452D17 48                      dec eax
:00452D18 7E1A                    jle 00452D34

```

Step 27. Look at 00452D01 and 00452D18 addresses. It's where it will jump to when it complains. Let's find out.

Make sure the green color bar is on 00452D01 7531 jne 00452D34
and you should see Offset address below on the screen like @Offset
00052101h. It's where you can patch it in MSCHED.EXE.

Step 28. Go back to WC, run HIEW MSCHED.EXE, press F4 to select Decode mode (ASM), press F5 and enter 52101. You should see like:

```

.00052D01: 7531                      jne .000052D34 ----- (1)
.00052D03: 8B45FC                    mov     eax,[ebp][-0004]
.00052D06: 8B80D4090000              mov     eax,[eax][0000009D4]
.00052D0C: 8B80FC000000              mov     eax,[eax][0000000FC]
.00052D12: 8B10                      mov     edx,[eax]
.00052D14: FF5210                    call    d,[edx][00010]
.00052D17: 48                        dec     eax
.00052D18: 7E1A                      jle     .000052D34 ----- (2)

```

Step 29. That's where you can change the bytes, press F3, enter EB and go below till 7E1A (offset 52118), enter EB and press F9 to update MSCHED.EXE. Exit HIEW.

Step 30. Finally, run MSCHED.EXE and try to add more macros or to add more than 20 lines in a script. Does it work? Kewl, you've made it!!

PART 3: To crack TrayCal 1.0 (to enter any codes)

Step 1. Run TRAYCAL.EXE

Step 2. Enter your name and codes, you'll see the error message which it says that you've entered invalid codes. (You should write down this message) and exit the program.

Step 3. Ok, exit the program.

Step 4. Run WC, go to TrayCal directory.

Step 5. Copy TRAYCAL.EXE to TRAYCAL.EXX (for backup) and copy TRAYCAL.EXE to TRAYCAL.W32 (for use by W32Dasm)

Step 6. Run W32Dasm and disassemble TRAYCAL.W32

Step 7. Once it's disassembled, click STRING DATA REFERENCE, look down for the string "Sorry, invalid registration code..".
(You should remember that error message), double click on it.

Step 8. Close SDR window, you should see the line:

```

:0043FD30 7E1A                      jle 0043FD4C
:0043FD32 6A00                      push 00000000
:0043FD34 668B0DE4FF4300            mov cx, word ptr [0043FFE4]
:0043FD3B 33D2                      xor edx, edx

```

* Possible StringData Ref from Code Obj ->"Sorry, invalid registration code."

Look at 0043FD30 address, it's where it'll jump to when invalid codes.

Let's try.

Make sure the green color bar is on 0043FD30 7E1A jle 0043FD4C
and you should see Offset address below on the screen like @Offset
0003F130h. It's where you can patch it in TRAYCAL.EXE.

Step 9. Go back to WC, run HIEW TRAYCAL.EXE, press F4 to select Decode mode (ASM), press F5 and enter 3F130. You should see like:

```
.0003FD30: 7E1A                               jle   .00003FD4C   ----- (1)
.0003FD32: 6A00                               push   000
.0003FD34: 668B0DE4FF4300                   mov    cx,[00043FFE4]
.0003FD3B: 33D2                               xor    edx,edx
```

Step 10. That's where you can change the bytes, press F3, enter EB, press F9 to update TRAYCAL.EXE. Exit HIEW.

Step 11. Run TRAYCAL.EXE, does it work? Nah, it compares also shit in registry!

Step 12. Go back to W32Dasm, click again on "Sorry, invalid registration.."

Step 13. Close SDR window, you should see the line:

```
* Referenced by a (U)nconditional or (C)onditional Jump at Address:
|:0043FE34(C)
|
:0043FF1B 6A00                       push 00000000
:0043FF1D 668B0DE4FF4300           mov cx, word ptr [0043FFE4]
:0043FF24 33D2                       xor edx, edx
```

* Possible StringData Ref from Code Obj ->"Sorry, invalid registration code."

Do you see above that Referenced Jump at Address? : 0043FE34(C)
Now press PgUp key 2 or 3 times till you see:

```
:0043FE34 0F85E1000000               jne 0043FF1B
```

* Possible StringData Ref from Code Obj ->"Software\Spaeder"

```
:0043FE3A 8B0DDC194400               mov ecx, dword ptr [004419DC]
```

Step 14. Look at 0043FE34 address, we know that it compares again before adding a new registration/data to your registry. Now let's try.
Make sure the green color bar is on 0043FE34 0F85E1000000 jne 0043FF1B
and you should see Offset address below on the screen like @Offset
0003F234h. It's where you can patch it in TRAYCAL.EXE.

Step 15. Go back to WC, run HIEW TRAYCAL.EXE, press F4 to select Decode mode (ASM), press F5 and enter 3F234. You should see like:

```
.0003FE34: 0F85E1000000                       jne   .00003FF1B   ----- (1)
.0003FE3A: 8B0DDC194400                       mov    ecx,[0004419DC]
.0003FE40: B201                               mov    dl,001
.0003FE42: A128D84300                       mov    eax,[00043D828]
```

Step 16. That's where you can change the bytes, press F3, enter 0F84, press F9 to update TRAYCAL.EXE. Exit HIEW.

Step 17. Run TRAYCAL.EXE, does it work? Kewl, you've registered it!!

PART 4: Why I copy *.EXE to *.W32 files

I know some people is wondering why I copy *.EXE to *.W32 files. Easily..

I use *.EXX when sometimes the program won't work, then I could copy *.EXX back to *.EXE files. And when *.W32 I can't patch *.EXE files when it's still used by W32Dasm, therefore W32Dasm uses now *.W32 files.. Now tell me how I can do that trick! :-) Also, remember to save disassembled files before exiting W32Dasm, next time you don't need to disassemble programs again. You can open saved files by clicking on Open Project Files!

PART 5: ASM Source Code for a Patcher by Nop/PC '97

-----<cut here>-----

Windows Cracking Tutorial v1.0

Page 1 of 7

=====

ED!SON's Windows 95 Cracking Tutorial v1.00

=====

CONTENTS

=====

1. Introduction to Windows cracking
2. Quick introduction to SoftICE/Win 2.00
3. Finding registration codes
 - 3.1 Task Lock 3.00 - A simple registration number only protection
 - 3.2 Command Line 95 - Easy name/code registration
4. Making a keymaker for Command Line 95
5. How PUSH and CALL and things really work when the program call a function
6. About Visual Basic programs

APPENDIX

=====

- A. Making SoftICE load symbols
- B. Syntax for the functions
- C. Where to obtain the softwares
- D. Contacting me

1. INTRUCTION TO WINDOWS CRACKING

=====

Cracking a Windows program is most often more simple than a program running in Dos. In Windows, it's hard to hide anything from anyone who really looks for information, as long as Windows own functions are used.

The first (and often only) tool you need is SoftICE/Win 2.00, a powerful debugger from NuMega. Some people find it hard to use, but I will tell you how to do efficient debugging with it, and I hope you'll understand me :-)
I have made an Appendix (A) with some SoftICE/Win 2.00 info you should read.
I never had any problems installing SoftICE, so if you have, I'll have to refer to the manual.

URLs to all software you need are in Appendix C.

- ED!SON, edison@ccnux.utm.my

2. QUICK INTRODUCTION TO SOFTICE/WIN 2.00

=====

This should be a fairly bad view of the SoftICE screen layout:

Registers	Use 'R' to edit
Data Window	Use 'D' to view an address, 'E' to edit
Code Window	Use 'U' to view an address, 'A' to insert asm code
Command Window	Type commands and read output here

Other important keys are (in the default key layout):

'H'/F1 - On-line help
F5/Ctrl+D - Run
F8 - Step into functions
F10 - Step over functions
F11 - Step out of function

3. FINDING REGISTRATION CODES

=====

This is probably the easiest way to practice, to get a shareware program and try to register it.

3.1 Task Lock 3.00 - A simple registration number only protection

=====

This is a simple protection, only a code, that doesn't change.

3.1.1 Examining the program

=====

Is it 16 or 32 bit? Where do I enter registration information? Does the help give me any clue on how the registration works? Go and have a find out before you continue!

....You should be checking now!...Are you checking?...Have you checked?...

OK, now you know it's a 32-bit Windows 95 application, and that you can register the program by entering a single Registration Number in a dialog box that appears when choosing the menu "Register|Register...". You also know, by reading in help, that there are two types of registration: Individual and Site License. So most probable there will be TWO checks for valid codes.

3.1.2 Trap the code routine

=====

The codes are usually entered in normal Windows Edit boxes. To check the code, the program must read the contents of the Edit box with one of these functions:

16-bit	32-bit
-----	-----
GetWindowText	GetWindowTextA, GetWindowTextW
GetDlgItemText	GetDlgItemTextA, GetDlgItemTextW

The last letter of the 32-bit functions tell if the function uses one-byte or double-byte strings. Double-byte code is RARE.

Maybe you got my idea... "If I only could break on GetWindowText" And - you can! But first you must be sure that these symbols are loaded by SoftICE. (See Appendix A)

To set up a "trap" (really called breakpoint) in SoftICE, you first enter the debugger with Ctrl+D, then use the command BPX followed by the name of the function or a memory address. And Task Lock is 32-bit so let's put a breakpoint on GetWindowTextA. If that doesn't work, we can try the others.

Type like this in SoftICE:

:bpx getwindowtexta

If you get an error message like "No LDT", make sure you don't run any other applications in the background. I've noticed that Norton Commander/Dos disturbs this function. You can check if you got any breakpoint by listing breakpoints:

:bl

This would give something like:

00) BPX USER32!GetWindowTextA C=01

To get out of SoftICE, you press Ctrl+D again

Well, anyway, you have set your breakpoint that will trap any call to GetWindowTextA. Now let's try to enter some value in the registration number field and press OK... You press OK... and you just get a stupid message box telling you your code was wrong. So it wasn't GetWindowTextA... Let's try GetDlgItemTextA. First we erase the old breakpoint:

```
:bc 0
```

(0 means number of breakpoint in the breakpoint list)

And now set the new one:

```
:bpx getdlgitemtexta
```

Let's try again...

3.1.3 In the debugger

=====

Wow! It worked! You're now inside SoftICE, at the place where the function GetDlgItemTextA starts. To jump to wherever it was called from, press the key F11. You are now inside SGLSET.EXE, if you're not sure, look on the line between the code and the command window, it should look something like this:

```
-----SGLSET!.text+1B13-----
```

You can also disable the breakpoint now by doing this:

```
:bd 0
```

To enable it later if you want to run again do like this then:

```
:be 0
```

The first line in the code window looks like this:

```
CALL [USER32!GetDlgItemTextA]
```

To see the lines above, press Ctrl+Up arrow a few times, until you see the lines below. If you don't know anything about Assembler, I have added comments to the lines.

```
RET                                ; End of function
PUSH EBP                          ; Beginning of function
MOV EBP, ESP                      ; ...
SUB ESP, 0000009C                 ; ...
PUSH ESI                          ; ...
> LEA EAX, [EBP-34]               ; EAX = EBP-34
PUSH EDI                          ; ...
MOVE ESI, ECX                    ; ...
PUSH 32                          ; Save: Maximum size of string
> PUSH EAX                       ; Save: Address of text buffer
PUSH 000003F4                    ; Save: Identifier of control
PUSH DWORD PTR [ESI+1C]          ; Save: Handle of dialog box
CALL [USER32!GetDlgItemTextA]    ; Get the text
```

The PUSH commands means save the values for later use. I have marked the important lines with a '>' char. By looking at this we know that the address to the text buffer was stored in EAX, and that EAX was EBP-34. So now we look at EBP-34 like this:

```
:d ebp-3
```

You should now be able to read what you entered if you look in the data window. Now we have to find a place where your code is matched with a working one. So we step through the program one instruction at a time with F10 until we find something about EBP-34... You don't step for very long until this code pops up:

```
> LEA EAX, [EBP+FFFFFF64]         ; EAX = EBP-9C
LEA ECX, [EBP-34]                ; ECX = EBP-34
PUSH EAX                         ; Save: EAX
PUSH ECX                         ; Save: ECX
> CALL 00403DD0                   ; Call a function
```

```

ADD     ESP, 08                ; Erase saved information
TEST    EAX, EAX               ; Check function return
JNZ     00402BC0               ; Jump if not zero

```

To me, this looks directly like a string compare function. They work like this:
 * Input two strings, return zero if equal, otherwise non-zero

And why should the program compare a string with the one you entered? To see if it was valid! (As you probably already have figured out)

Well, what is hiding behind the address [EBP+FFFFFF64] then? SoftICE doesn't handle negative numbers very well, so to find out the real value of this you do this calculation:

100000000 - FFFFFFF64 = 9C

You can do the calculation in SoftICE like this:

```
:? 0-FFFFFF64
```

The number 100000000 is too big for SoftICE, but on the other hand it gives the same result.

And now... time to look what hides behind EBP-9C... Do like this:

```
:d ebp-9c
```

The data window will now show a long row of numbers - the code! But remember what I said earlier... two types of registration gives two codes... so after you've written down the code you got, we continue stepping width F10... We come to this piece of code:

```

>  LEA     EAX, [EBP-68]        ; EAX = EBP-68
    LEA     ECX, [EBP-34]        ; ECX = EBP-34
    PUSH    EAX                 ; Save: EAX
    PUSH    ECX                 ; Save: ECX
>  CALL    00403DD0             ; Call the function again
    ADD     ESP, 08              ; Erase saved information
    TEST    EAX, EAX            ; Check function return
    JNZ     00402BFF            ; Jump if not zero

```

And what can you find at the address EBP-68? Well... another registration code!

```
:d ebp-68
```

That's it... I hope everything worked!

3.2 Command Line 95 - Easy name/code registration, and we make a keymaker

=====

This is a nice sample program, with a very easy code calculation.

3.1.1 Examining the program

=====

You examine the program and you see it's a 32-bit application, demanding Name and Code in the registration dialog.
 So let's start!

3.1.2 Trap the code routine

=====

We do as with TaskLock - we set breakpoints. We can set breakpoints on both of the two most probable functions: GetWindowTextA and GetDlgItemTextA. Press Ctrl+D to make SoftICE show up, and then:

```

:bpx getwindowtexta
:bpx getdlgitemtexta

```

Now go to the registration dialog, and enter a name and some number (an integer is the most usual code). I wrote like this, and pressed OK...

```
Name:  ED!SON '96
Code:  12345
```

The program stopped at GetDlgItemTextA. Just like with TaskLock, we press F11 to return to the calling function. We scroll upwards with Ctrl+Up and the call looks like this:

```
MOV     ESI, [ESP+0C]
PUSH    1E                                ; Maximum length
PUSH    0040A680                          ; Address to buffer
PUSH    000003ED                          ; Control handle
PUSH    ESI                              ; Dialog handle
CALL    [User32!GetDlgItemTextA]
```

The number 40A680 looks interesting to us, so we check that address:

```
:d 40a680
```

And what shows up in the data window, if not the name we entered. Well, we look below the above piece of code, and it says:

```
PUSH    00                                ; (not interesting)
PUSH    00                                ; (not interesting)
PUSH    000003F6                          ; Control handle
MOV     EDI, 0040A680                     ; Save address to buffer
PUSH    ESI                              ; Dialog handle
CALL    [User32!GetDlgItemInt]
```

GetDlgItemInt is similar to GetDlgItemText, but it returns an integer from the text box. It is returned in EAX, so we step past these instructions, and look in the registers window... For me it says:

```
EAX=00003039
```

And what is hex 3039? Type:

```
:? 3039
```

And you get this:

```
00003039  0000012345  "09"
^ hex      ^ dec      ^ ascii
```

And, as you can see (and already had guessed), it shows the code you wrote. Ok, what now? Let's look at the code that follows, first the return code is saved:

```
MOV     [0040A548], EAX                  ; Save return code
MOV     EDX, EAX                        ; Put return code in DX too
```

3.1.3 Calculating the code

=====

Then the code is calculated!

```
MOV     ECX, FFFFFFFF                    ; These rows calc string length
SUB     EAX, EAX                        ; .
REPNE   SCASB                           ; .
NOT     ECX                              ; .
DEC     ECX                              ; ECX now contains the length
MOVSB   EAX, BYTE PTR [0040A680]         ; Get byte at 40A680
IMUL    ECX, EAX                        ; ECX = ECX * EAX
SHL     ECX, 0A                          ; Shift left 0A steps
ADD     ECX, 0002F8CC                     ; Add 2f8cc to the result
MOV     [0040A664], ECX
```

And validated...

```
CMP     ECX, EDX                        ; Compare codes
JZ      00402DA6                         ; If equal, jump...
```

When you have stepped to the comparison of the codes, you can check what your code REALLY should have been:

```
:? ecx
```

For me this gave:

```
000DC0CC 0000901324
```

This means that the right code for me is 901324.

So press F5 or Ctrl+D to let it run, and try again, with the RIGHT code, but in decimal form. It will work!

4. MAKING A KEYMAKER FOR COMMAND LINE 95

=====

We look at the calculation of the code above, and translate it to C. We make this very simple description of how the code is calculated:

```
code = ( (uppercase_first_char * length_of_string) << 0x0A) + 0x2f8cc;
```

Note (1): One thing not to forget is that all chars are converted to uppercase when you enter them in the text box, so we have to do the same.

Note (2): "<< 0x0A" means "multiply with 2^10"

A whole program in C could look like this:

```
#include <string.h>
#include <stdio.h>

int main()
{
    unsigned long code;
    unsigned char buffer[0x1e];

    printf("CommandLine95 Keymaker by ED!SON '96\n");
    printf("Enter name:  ");
    gets(buffer);

   strupr(buffer);
    code = ( ((unsigned long)buffer[0] *
              (unsigned long)strlen(buffer))
            << 0x0A) + 0x2f8cc;

    printf("Your code is: %lu", code);

    return 0;
}
```

Enjoy!

4. HOW PUSH AND CALL AND THINGS REALLY WORK WHEN THE PROGRAM CALL A FUNCTION

=====

We look at this piece of code from TaskLock again:

```
PUSH    32                ; Save: Maximum size of string
PUSH    EAX               ; Save: Address of text buffer
PUSH    000003F4          ; Save: Identifier of control
PUSH    DWORD PTR [ESI+1C] ; Save: Handle of dialog box
CALL    [USER32!GetDlgItemTextA] ; Get the text
```

If you call this from a C program, the call would look like this:

```
GetDlgItemTextA(hwndDlg, 0x3F4, buffer, 0x32);
    ^ [ESI+1C]      ^ EAX
```

PUSH stores data on something called the stack. This results in that each PUSH put a new piece of data on top of the stack, and the function then checks what is lying on the stack and use it to do whatever it's supposed to.

5. ABOUT VISUAL BASIC PROGRAMS

=====

The Visual Basic .EXE files are not real, compiled EXEs. They just contain code to call VBRUNxxx.DLL, which reads data from the EXE to run the program. This is also why Visual Basic programs are so slow. And when the EXE files are not real, you can't disassemble them, you just find the call to the DLL and a lot of garbage, and when you debug, you end up in the DLL too.

The solution is a decompiler. There is a decompiler for Visual Basic 2 & 3, made by someone called DoDi. It is shareware and available on the net. (See Appendix C) In Windows 95, there are Visual Basic version 4 32-bit apps, and for them there is no decompiler I know of, although I wish there was.

Note: No real (or bright) programmer makes programs in Basic.

A. MAKING SOFTICE LOAD SYMBOLS

=====

To check if SoftICE has loaded the symbols for GetWindowText, you enter SoftICE by pressing Ctrl+D and then write like this:

```
:exp getwindowtext
```

If you don't get all the GetWindowText functions listed, you need to edit \SIW95\WINICE.DAT by removing the comment chars (';') from some of the 'exp=' lines that follows this text: "Examples of export symbols that can be included for chicago" near the end of the file. You can remove comment chars from all of the lines, or to save memory, on just these files: kernel32.dll, user32.dll, gdi32.dll, which are the most important ones.

When you're ready editing, you'll have to reboot the computer to make it work.

B. Syntax for the functions

=====

It's always much easier to understand the function calls we talk about when you have the declarations, so here we go:

```
int GetWindowText(int windowhandle, char *buffer, int maxlen);
int GetDlgItemText(int dialoghandle, int controlid, char *buffer, int maxlen);
int GetDlgItemInt(int dialoghandle, int controlid, int *flag, int type);
```

For a more detailed description of the functions, check a Windows/Win32 programming reference.

C. WHERE TO OBTAIN THE SOFTWARES

=====

CRACKING TOOLS

SoftICE/Win 2.00: <http://www.geocities.com/SoHo/2680/cracking.html>

VB Decompiler: <ftp://ftp.sn.no/user/balchen/vb/decompiler/>

SAMPLE PROGRAMS

TaskLock: <http://users.aol.com/Sajernigan/sgllck30.zip>

CommandLine 95: <ftp://ftp.winsite.com/pub/pc/win95/miscutil/cline95.zip>

D. CONTACTING ME

=====

On IRC (EFNet): In #Ucf2000, #Cracking

On my homepage: <http://www.geocities.com/SoHo/2680/cracking.html>

OSCAR 8.0
Phrozen Crew 1998

Phone Book Pro 97 v2.31.0 build 482

by
Silicon Surfer
Phrozen Crew
(08 September 1997)

Target: Phone Book Pro 97 v2.31.0 build 482
URL: <http://www.idyle.com/pbpro97/download/pbpro97.zip>
Reason: Found a request dated 09/04/97 asking for it in abc.

Tools: Hex Workshop v2.53
W32Dasm v8.9

OK, first thing I like to do is get a String Data Reference list and read through it. I found some 'interesting' references.

```
" PLEASE REGISTER. Read "Register.txt"          ; Nag
"42F6171D60EF25F30105090B066BA8"                ; Possible Code?
"43EF2E2A67E144D42BE83FCA45"                    ; " "
"6C87868FB19963B270AF69B954DE"                  ; " "
"72878A97155AC14CD84CC055"                      ; " "
"Application has a CRC error!"                    >; Hmm... CRC checking eh?
"Application ID block not found!"                ; " "
"Can not have more than "                        >; Sounds like some kinda limit
"CREW"                                            ; Oh my, references to PC97!
"MAD MAX!"                                       ; " "
"MADMAX!"                                       ; " "
"PHROZEN"                                       ; " "
"Please register your phone book "              ; Nag
"Registration code:"                            ; Self Explanatory
"RegistrationCode"                             ; " "
"SALTINE"                                       ; More PC97
"Sex"                                           ; Just like the word!
"The Application CRC is not calculated "         ; Bad CRC Results
"This is an unregistered version, "             >; Direct from the main Nag
"Unregistered Version"                         ; Nag
"Unregistered"                                >; " "
"USER NAME"                                    ; Self Explanatory
"Username"                                     ; " "
```

Lest test the proggy, see what needs to be done.

First thing I notice:

- 1) This damn thing is slow on entry! CRC checking will do that. Maybe we should speed this up a little bit, but that will be later.
- 2) Our first line in String References shows on the opening Nag Screen.
- 3) Register.txt says:

The registered version will remove the limit of 20 entries as well as the nag screen which we all dislike! So, if you use it, register it!

So there are only 20 entries allowed.

- 4) Changed system date to 2010 and the program still runs.

Assignment, either crack password & CRC, or crack CRC & Nag Screen & 20 entries.

Lets start with the CRC checking... can't apply the crack if CRC fails!
Here is the code from the reference to "Application has a CRC error!".

* Referenced by a CALL at Address:

->"for more details."
:004BBAEB BAA4BF4B00 mov edx, 004BBFA4
```

Simple routine, do check, if match goto Nag, else continue as if
registered.

So we change:

```
:004BB9C1 0F84C7000000 je 004BBA8E
to
```

```
:004BB9C1 0F85C7000000          jne 004BBA8E
```

Nag screen gone, only one more!!! But wait, after further review of the program, it is COMPLETELY registered. No more how to purchase, and about screen shows registered to UNREGISTERED. Great! So we skip the 20 entries and are home free.

However, it seems Damien Rame doesn't like PhrozenC, and since 'Phrozen Crew' and 'Unregistered' have the same number of characters... (Evil Grin)... let us make one last change.

Search for "UNREGISTERED" in the hex editor, and change it to Phrozen Crew.

Crack done!

Hi ya!

Phew, here are we again at learning crack yer babes! Too many newbees!! *cough*
Ok, let's rock, in this tutor I'll teach you how to play with your WIN Registry
and how to kill Timeouts. :-)

No SoftIce, still my little ol' laptop and I'm getting a new machine soon, then
we'll sing soon! :-)

Sorry for my bad grammatical errors, I hope you'll understand this piece! :-)
Ok, let's rave!

TOOLS:

For tools you need the followings: (I use these tools, I assume you'll use 'em)

W32Dasm 8.9 or high version (www.expage.com/page/w32dasm)

Hacker's View 5.66 (E-mail: sen@suslikov.kemerovo.su)

FAR 1.50b (<ftp://ftp.elf.stuba.sk/pub/pc/utilfile/far150b.exe>) It's real nice!
or use Windows Commander 3.50 Beta 5 in stead of FAR (<http://www.ghisler.com>)

Ask any crackers to get you these tools, they'll be happy to serve you! :-)

CONTENTS:

- 1) How to register TrayCal 1.0 using WIN Registry
URL: <http://www.spaeder.com>
- 2) How to register CopyPaste 1.20
URL: <http://www.wz.com/scriptsoftware>
- 3) How to remove timeout in Radio Destiny 0.2
URL: <http://www.destiny-software.com/destiny>
- 4) PASCAL Source Code for a Patcher by tKC/PC '98

PART 1: To register TrayCal 1.0

Step 1. Run TRAYCAL.EXE

Step 2. You'll see that you have 15 evaluation launches remaining. Right click
on TC, and click Register. Enter your name/any code. *boom* Invalid
registration code.

Step 3. Ok, exit the program.

Step 4. Run WC, go to TrayCall directory.

Step 5. Copy TRAYCAL.EXE to TRAYCAL.W32

Step 6. Run W32Dasm and disassemble TRAYCAL.W32

Step 7. Once it's disassembled, click STRING DATA REFERENCE, look down for the
string "Sorry, invalid registration code."
(You should remember that error message), double click on it.

Step 8. Close SDR window, you should see the line:

* Possible StringData Ref from Code Obj ->"Sorry, invalid registration code."

```
:0043FD3D A1E8194400          mov eax, dword ptr [004419E8]  
:0043FD42 E88D02FFFF          call 0042FFD4
```

Step 9. Ok, let's find out what happens if you entered valid codes. Press PgDn key 3 or 4 times till you see:

```
* Possible StringData Ref from Code Obj ->"Software\Spaeder"
|
:0043FE3A 8B0DDC194400      mov ecx, dword ptr [004419DC]
:0043FE40 B201              mov dl, 01
:0043FE42 A128D84300        mov eax, dword ptr [0043D828]
:0043FE47 E880E1FFFF        call 0043DFCC
:0043FE4C A3FC274400        mov dword ptr [004427FC], eax
:0043FE51 C605C819440001    mov byte ptr [004419C8], 01
:0043FE58 A0C8194400        mov al, byte ptr [004419C8]
:0043FE5D 50                push eax

* Possible StringData Ref from Code Obj ->"EnhancedSystemDate"
|
:0043FE5E B920004400        mov ecx, 00440020

* Possible StringData Ref from Code Obj ->"TrayCal"
|
:0043FE63 8B15D8194400      mov edx, dword ptr [004419D8]
:0043FE69 A1FC274400        mov eax, dword ptr [004427FC]
:0043FE6E E8ADE5FFFF        call 0043E420
:0043FE73 6A01              push 00000001

* Possible StringData Ref from Code Obj ->"RegistrationStatus"
```

Step 10. Interesting.. do you see "RegistrationStatus"? Let's run REGEDIT and have a look at HKCU\Software\Spaeder\TrayCal:

```
EnhancedSystemDate="0"
RegistrationStatus="0"
```

What does it mean? You should know what it does! :-) Ok, let's modify them. Replace "0" to "1". After it should look like:

```
EnhancedSystemDate="1"
RegistrationStatus="1"
```

Note, we should have to modify EnhancedSystemDate Key too, otherwise it won't work. Ok, press F5 to update registry.

Step 11. Run TRAYCAL.EXE. Right click on TC, and click About. Wow, it's reg'd now!! Easy huh?

Step 12. Anyway you can export HKCU\Software\Spaeder\TrayCal to a file. Click Export Registry File, save it to TC.REG.. See below:

```
REGEDIT4

[HKEY_CURRENT_USER\Software\Spaeder\TrayCal]
"RegistrationStatus"="1"
"EnhancedSystemDate"="1"
```

Step 13. You can pass TC.REG to anyone or next time run REGEDIT TC.REG, it'll import to Registry File..

PART 2: To register CopyPaste 1.20

Step 1. Run CopyPaste.EXE

Step 2. Enter password to register it. *boom* Wrong password - no register.

Step 3. Ok, exit the program.

Step 4. Run WC, go to CopyPaste directory.

Step 5. Copy CopyPaste.EXE to CopyPaste.EXX (for backup) and copy CopyPaste.EXE to CopyPaste.W32 (for use by W32Dasm)

Step 6. Run W32Dasm and disassemble CopyPaste.W32

Step 7. Once it's disassembled, click STRING DATA REFERENCE, look down for the string "Wrong password - no register..".
(You should remember that error message), double click on it.

Step 8. Close SDR window, you should see the lines:

```
* Referenced by a (U)nconditional or (C)onditional Jump at Addresses:  
|:00403427(C), :00403438(C)
```

```
:0040346F 8D442430      lea eax, dword ptr [esp+30]  
:00403473 68FF000000      push 000000FF  
:00403478 50              push eax  
:00403479 8B0D1C664100     mov ecx, dword ptr [0041661C]
```

```
* Possible Reference to String Resource ID=00014: "Wrong password - no reg.."
```

Step 9. Did you see Referenced Jump? (403427 and 403438) Ok, press PgUp key till you see:

```
:00403427 7446              je 0040346F  
:00403429 8D442410      lea eax, dword ptr [esp+10]  
:0040342D 50              push eax  
:0040342E E81D400000     call 00407450  
:00403433 83C404        add esp, 00000004  
:00403436 85C0          test eax, eax  
:00403438 7435          je 0040346F  
:0040343A 8D442430      lea eax, dword ptr [esp+30]  
:0040343E 68FF000000     push 000000FF  
:00403443 50              push eax  
:00403444 8B0D1C664100     mov ecx, dword ptr [0041661C]
```

```
* Possible Reference to String Resource ID=00013: "Thank you for regist..."
```

Step 10. Look at 00403427, it's where it will jump to when it has fucked. Let's see. Make sure the green color bar is on 00403427 7446 je 0040346F and you should see Offset address below on the screen like @Offset 00002827h. It's where you can patch it in CopyPaste.EXE.

Step 11. Go back to WC, run HIEW COPYPA~1.EXE, press F4 to select Decode mode (ASM), press F5 and enter 2827. You should see like:

```
00002827: 7446              je      00000286F  ----- (1)  
00002829: 8D442410          lea     eax,[esp][00010]  
0000282D: 50              push   eax  
0000282E: E81D400000       call   000006850  ----- (2)  
00002833: 83C404          add     esp,004  
00002836: 85C0          test   eax,eax  
00002838: 7435          je      00000286F  ----- (3)
```

NOTE: To prevent confusing offset address in HIEW, edit HIEW.INI, following:
ShowOffset = Global

Step 12. That's where you can change the bytes, press F3, enter 9090 and go

below till 7435 (offset 2838), enter 9090 and press F9 to update
COPYPA~1.EXE. Exit HIEW.

Step 13. Run CopyPaster.EXE, does it work? *eeyaa* You've made it!!

PART 3: To remove timeout in Radio Destiny 0.2

Step 1. Run RADIO.EXE

Step 2. *boom* This version has expired. Exit the program

Step 3. Run WC, go to RADIO directory.

Step 4. Copy RADIO.EXE to RADIO.EXX (for backup) and copy RADIO.EXE to
RADIO.W32 (for use by W32Dasm)

Step 5. Run W32Dasm and disassemble RADIO.W32.

Step 6. Once it's disassembled, click STRING DATA REFERENCE, look down for the
string "This version has expired."
Hmm, no string found, what now? Debugger in W32Dasm won't work due of
16bit program. Grrrr.. Ok, let's try..

Step 7. Don't quit W32Dasm.. Run HIEW RADIO.EXE. Press F4 for HEX Mode, press
F7. Search a string for "This version has exp"
Gotcha! Found it! What now? Ok, locate the offset 6A26 (look above on
HIEW)

Step 8. Go back to W32Dasm, press PgDn key down for f*cking times till you
get offset address "00006A26h" (look below on W32Dasm)

Step 9. Wow, what have we got? We got here:

```
:0001.63A6 54686973207665727369 DB "This versi"  
:0001.63B0 6F6E2068617320657870 DB "on has exp"  
:0001.63BA 697265642E00 DB "ired.",0
```

Press PgUp key 3 or 4 times. Anywhere when you see "BYTE xxxxxh" ignore
them, those referenced jumps won't work!!

Step 10. Hmm, what do you see? Call USER.MESSAGEBOX!!
:0001.630A 9AC75B0000 call USER.MESSAGEBOX
So we know it calls messagebox when it has expired.

Press UP key till you see:

```
:0001.62F1 7C21 j1 6314  
:0001.62F3 7F05 jg 62FA  
:0001.62F5 3DB40B cmp ax, 0BB4  
:0001.62F8 761A jbe 6314
```

Step 11. Look at 0001.62F1, it's where it will jump to when it has fucked.
Let's see. Make sure the green color bar is on 0001.62F1 address.
and you should see Offset address below on the screen like @Offset
00006971h. It's where you can patch it in RADIO.EXE.

Step 12. Go back to WC, run HIEW RADIO.EXE, press F4 to select Decode mode
(ASM), press F5 and enter 6971. You should see like:

```
00006971: 7C21 j1 000006994  
00006973: 7F05 jg 00000697A
```

```

00006975: 3DB40B                                cmp     ax,00BB4
00006978: 761A                                  jbe     00006994

```

Step 13. That's where you can change the bytes, press F3, enter EB and press F9 to update RADIO.EXE. Exit HIEW.

Step 14. Ok, run RADIO.EXE *boom* It works!! :-)

PART 4: PASCAL Source Code for a Patcher by tkC/PC '98

-----<cut here>-----

```
Uses Crt;
```

```

Const A: Array[1..4] of Record {<----- 4 bytes to be patched>
      A : Longint;
      B : Byte;
End =
((A:$2827;B:$90), {<----- offset "2827" and byte "90" to be changed}
(A:$2828;B:$90), {<----- offset "2828" and byte "90" to be changed}
(A:$2838;B:$90), {<----- offset "2838" and byte "90" to be changed}
(A:$2839;B:$90)); {<----- offset "2839" and byte "90" to be changed}

```

```

Var Ch:Char;
    I:Byte;
    F:File;
    FN:file of byte;
    Size:longint;

```

```

Begin
  Writeln('Little Patch');writeln('Crack for CopyPaste 1.20 by tkC/PC ''98');
  Assign(F,'COPYPA~1.EXE'); {<----- filename to be patched}
  {$I-} Reset(F,1); {$I+}
  If IOResult <> 0 then
    begin
      writeln('File not found!');
      halt(1);
    end;
  For I:=1 to 4 do {<----- 4 bytes to be patched}
  Begin
    Seek(F,A[I].A);
    Ch:=Char(A[I].B);
    Blockwrite(F,Ch,1);
  End;
  Writeln('File successfully patched!');
End.

```

-----<cut here>-----

Ok, enough for now. I hope you've enjoyed this tutor too much as I did! :-)
I'll see you next time at Tutor #6!

PersGreetz to Taha, Taylor, ThatDude, Archimede, PowerLord and everyone in PC!!

This tutor is dedicated to Taha.. as always..

You can find me at #pc98 or email me at tkc@goplay.com

Enjoy it,
The Keyboard Caper,

The Founder of PhRoZeN CRew '94 - '98

tKC Cracking Tutorial (Lesson 6)

Hi ya!

Phew, long time no tutor!
More newbees *cough..*

In this tutor I'll teach you everything about W32Dasm. Sorry, no SoftIce or IDA this time, due of too short time (damn coding in Delphi 3). But I've got a new machine *superPC!!* Next tutor we'll rave about SoftIce for sure. :-)

Sorry for my bad grammatical errors, I hope you'll understand this piece!
Ok, let's rock!

CONTENTS:

- 1) How to register DocSweep 3.0
Using WIN Registry without patching a program.
URL: <http://www.spader.com>
- 2) How to register Cover Your Tracks 2.0
Using INI file without patching a program.
URL: <http://www.geocities.com/SiliconValley/Vista/5610/>
- 3) How to crack CD Check in Quake 2 3.10
Patching your game that you can play it without your CD.
URL: <http://www.idsoftware.com>
- 4) How to register TrayRun 2.0.1
Patching a program to accept your regcode but still unregistered after restart your program and how to fix it. Most shareware programs make use of this reg scheme.
URL: <http://www.mjtnet.com>
- 5) Pascal Source Code for a Patcher by tKC/PC '98
You'll need Turbo Pascal 7.0 to compile this source.
- 6) My last words

TOOLS:

For tools you need the followings:
(I use these tools, I assume you'll use 'em)

W32Dasm 8.9 - <http://www.fortunecity.com/bally/waterford/18/w32dsm89.zip>

Hacker's View 5.66 - <ftp://ftp.cdrom.com/.27/sac/utilprog/hiew566.zip>

FAR 1.50b - <ftp://rwntug.quarta.msk.ru/WinUtil/Rar/far150b.exe>
or Windows Commander 3.50 Beta 7 - <http://www.ghisler.com>

or ask any crackers to get you these tools, they'll be happy to serve you!

BTW: You can find another tools eg. SoftIce 3.22, IDA 3.70 and useful programs at:
<http://cracking.home.ml.org>

Don't tell me that you haven't got these tools for the next tutor! :-)

PART 1: How to register DocSweep 3.0

Step 1. Run DOCSWEEP.EXE

Step 2. You'll see that you have 30 evaluation launches remaining. Right click on DS, and click Reg Number. Enter your name/any code. *boom* Invalid registration code.

Step 3. Ok, exit the program.

Step 4. Run WC, go to DocSweep directory.

Step 5. Copy DOCSWEEP.EXE to DOCSWEEP.W32

Step 6. Run W32Dasm and disassemble DOCSWEEP.W32

Step 7. Once it's disassembled, click STRING DATA REFERENCE, look down for the string: "Invalid registration code.". (You should remember that error message), double click on it.

Step 8. Close SDR window, you should see the line:

```
* Possible StringData Ref from Code Obj ->"Invalid registration code." <---- bad boy
```

```
:0043578D A138784300      mov eax, dword ptr [00437838]
:00435792 E89952FFFF      call 0042AA30
```

Step 9. Ok, let's find out what happens if you entered valid codes. Press PgUp key 1 or 2

times till you see:

```
:004356E1 0F859B000000      jne 00435782 <---- if invalid code, goto bad boy
```

```
* Possible StringData Ref from Code Obj ->"Software\Spaeder"
```

```
:004356E7 8B0D34784300      mov ecx, dword ptr [00437834]
:004356ED B201              mov dl, 01
:004356EF B86C394300      mov eax, 0043396C
:004356F4 E8CFE8FFFF      call 00433FC8
:004356F9 A398864300      mov dword ptr [00438698], eax
:004356FE C6059C86430001    mov byte ptr [0043869C], 01 <---- good boy
:00435705 A09C864300      mov al, byte ptr [0043869C]
:0043570A 50              push eax
```

```
* Possible StringData Ref from Code Obj ->"Enhanced Hard Drive"
```

Step 10. Interesting.. do you see what I see?? Let's run REGEDIT and have a look at HKCU\Software\Spaeder\DocSweep:

```
SectorsPerPartition="178" <---- remaining evaluation launches
```

Hmm, ok let's add a new key string. It should look like:

```
Enhanced Hard Drive="1"
SectorsPerPartition="178"
```

Ok, press F5 to update registry.

Step 11. Run DOCSWEEP.EXE. Right click on DS, and click About. WoW, it's registered now!!

Easy huh?

Step 12. There is another way to register DocSweep. Now you want enter any code, right?

Change "1" to "0" at Enhanced Hard Drive Key and change JNE to JE at 4356E1

address.

Run DS and enter your name and any code. *boom* Registered!

PART 2: How to register Cover Your Tracks 2.0

Step 1. Run CYT.EXE

Step 2. Now you get Register NAG screen. Click on Register and enter your name/any code. *boom* Sorry invalid code.

Step 3. Ok, exit the program.

Step 4. Run WC, go to CYT directory.

Step 5. Copy CYT.EXE to CYT.W32

Step 6. Run W32Dasm and disassemble CYT.W32

Step 7. Once it's disassembled, click STRING DATA REFERENCE, look down for the string: "Invalid code.". Hmm, no strings yet, what now? Ok, let's try search "Registered" click twice on it.

Step 8. Close SDR window, you should see the line:

```
* Possible StringData Ref from Code Obj ->"Registered" <---- good boy
```

```
:0043E7A1 BA6CE84300      mov edx, 0043E86C
:0043E7A6 E841E6FDFF      call 0041CDEC
```

Step 9. Ok, let's find out what does it do. Press PgUp key 1 or 2 times till you see:

```
* Possible StringData Ref from Code Obj ->"C:\windows\system\system.cyt"
```

```
:0043E743 BA34E84300      mov edx, 0043E834
:0043E748 8B08             mov ecx, dword ptr [eax]
....
....
```

```
* Possible StringData Ref from Code Obj ->"true" <---- good boy
```

```
:0043E769 BA5CE84300      mov edx, 0043E85C
:0043E76E E85153FCFF      call 00403AC4
:0043E773 7418             je 0043E78D <---- if not goto bad boy
....
....
```

```
* Referenced by a (U)nconditional or (C)onditional Jump at Address:
|:0043E773(C)
```

```
:0043E78D C605EC27440001      mov byte ptr [004427EC], 01
:0043E794 A1001C4400      mov eax, dword ptr [00441C00]
:0043E799 8B00             mov eax, dword ptr [eax]
:0043E79B 8B8020020000      mov eax, dword ptr [eax+00000220]
```

```
* Possible StringData Ref from Code Obj ->"Registered" <---- good boy
```

Step 10. Interesting.. do you see what I see?? What's that "C:\windows\system\system.cyt"?

Let's find a file at C:\windows\system\system.cyt and we find:

false

Step 11. Hmm, ok let's try change "false" to "true". Save it and run CYT.EXE
WOW, it's registered!! It's 1 of the stupid protections I even seen.

PART 3: How to crack CD Check in Quake 2 3.10

Step 1. Run QUAKE2.EXE

Step 2. You'll see that you have to insert your CD to play. Ok, no problem, write down error message. ("You must have the Quake2 CD in the drive to play")

Step 3. Ok, exit the program.

Step 4. Run WC, go to Quake2 directory.

Step 5. Copy QUAKE2.EXE to QUAKE2.EXX, and copy QUAKE2.EXE to QUAKE2.W32

Step 6. Run W32Dasm and disassemble QUAKE2.W32

Step 7. Once it's disassembled, click STRING DATA REFERENCE, look down for the string:
"You must have the Quake2 CD in..". (You should remember that error message),
double click on it.

Step 8. Close SDR window, you should see the line:

```
* Referenced by a CALL at Address:
|:00429038 <---- what is that?
```

```
:0042D4F0 E83BFFFFFF      call 0042D430
:0042D4F5 803800         cmp byte ptr [eax], 00
:0042D4F8 750F          jne 0042D509 <---- bad boy
```

```
* Possible StringData Ref from Data Obj ->"You must have the Quake2 CD in "
->"the drive to play."
```

Step 9. Ok, let's find out what calls this procedure. Hmm, do you see what I see?
Look above, referenced by a call at 429038!
Click Goto Code Location button, and enter 429038.

Step 10. Interesting.. what do we get? Here's what we got:

```
:00429034 85C0          test eax, eax
:00429036 7505          jne 0042903D <---- if not, jump to good boy
:00429038 E8B3440000    call 0042D4F0 <---- bad boy!
```

```
* Referenced by a (U)nconditional or (C)onditional Jump at Addresses:
|:00428FE5(U), :00428FF5(C), :00429019(U), :00429036(C)
```

```
:0042903D E84E710000    call 00430190 <---- good boy!
```

Step 11. Ok, let's change 75 to EB at 429036 address. Make sure the green color bar is
on 00429036 7505 jne 0042903D and you should see Offset address below on
the

screen like @Offset 00028436h. It's where you can patch it in QUAKE2.EXE.

Step 12. Go back to WC, run HIEW QUAKE2.EXE, press F4 to select Decode mode
(ASM), press F5 and enter 28436. You should see like:

```
00028436: 7505          jne 00002843D ----- (1)
00028438: E8B3440000    call 00002C8F0 ----- (2)
0002843D: E84E710000    call 00002F590 ----- (3)
00028442: 8B0DEC0F4700  mov ecx,[000470FEC]
```

```
00028448: A388104700          mov     [000471088],eax
```

Step 13. That's where you can change the bytes, press F3, enter EB and press F9 to update QUAKE2.EXE. Exit HIEW.

Step 14. Run QUAKE2.EXE, does it work? *eeyaa* You've made it!!

(Byte Ripper personal comment: Hey Michael Abrash I just love your work at ID and Dr.Dobb's Jornal magazine, keep up the good articles at www.ddj.com)

PART 4: How to register TrayRun 2.0.1

Step 1. Run TRAYRUN.EXE

Step 2. Click Register, and enter your name/any code. *boom* Registration Valid.

Step 3. Ok, exit the program.

Step 4. Run WC, go to TRAYRUN directory.

Step 5. Copy TRAYRUN.EXE to TRAYRUN.EXX and copy TRAYRUN.EXE to TRAYRUN.W32

Step 6. Run W32Dasm and disassemble TRAYRUN.W32

Step 7. Once it's disassembled, click STRING DATA REFERENCE, look down for the string: "Registration Failed". (You should remember that error message), double click on it.

Step 8. Close SDR window, you should see the lines:

```
* Possible StringData Ref from Code Obj ->"RegC" <---- and this?
```

```
:0042E6C0 BAACE74200          mov     edx, 0042E7AC
:0042E6C5 8BC6                mov     eax, esi
....
....
```

```
* Referenced by a (U)nconditional or (C)onditional Jump at Address:
|:0042E64C(C)
```

```
* Possible StringData Ref from Code Obj ->"Registration Failed." <---- bad boy
```

```
:0042E6F6 B8BCE74200          mov     eax, 0042E7BC
```

Step 9. Do you see what I see? Referenced jump! Ok, let's click Goto Code Location and enter:

42E64C and you'll find:

```
:0042E64C 0F85A4000000          jne     0042E6F6 <---- if not, jump to bad boy
```

```
* Possible StringData Ref from Code Obj ->"Registration Succesful." <---- good boy
```

```
:0042E652 B848E74200          mov     eax, 0042E748
```

Step 10. Kewl.. Let's play! Make sure the green color bar is on 0042E64C 0F85A4000000 and you should see Offset address below on the screen like @Offset 0002DA4Ch. It's where you can patch it in TRAYRUN.EXE.

Step 11. Go back to WC, run HIEW TRAYRUN.EXE, press F4 to select Decode mode (ASM), press F5 and enter 2DA4C. You should see like:

```
0002DA4C: 0F85A4000000          jne     00002DAF6  ----- (2)
0002DA52: B848E74200          mov     eax,00042E748
```

```

0002DA57: E87CBBFFFF          call    0000295D8  ----- (3)
0002DA5C: B201                 mov     dl,001
0002DA5E: B870304200          mov     eax,000423070
0002DA63: E8BC4AFFFF          call    000022524  ----- (4)

```

Step 12. That's where you can change the bytes, press F3, enter 0F84 and press F9 to update TRAYRUN.EXE. Exit HIEW.

Step 13. Run TRAYRUN.EXE. Enter your name/any code, now it says it's registered, right?

Click About and you'll see your name, kewl..

Step 14. Now exit TrayRun and run it again. Hmm, still unregistered? What now? No need to

pee your pants! It checks your name/any code in your WIN registry if it's valid!

They are stored at HKCU\Software\MJTNET\TrayRun\Settings.

Step 15. Go back to W32Dasm and open SDR window, look down for a string: "RegC" (Do you

remember where you have seen it before? You have seen it at 42E6C0 address before

we fixed the first part. Now, double click twice on "RegC".

Step 16. Close SDR window, you should see the lines:

* Possible StringData Ref from Code Obj ->"RegC"

```

:004309EC BA9C0B4300      mov     edx, 00430B9C
:004309F1 8BC3             mov     eax, ebx
....
....
:00430A0C 833DD426430000      cmp     dword ptr [004326D4], 00000000 <---- regcode!
:00430A13 750D             jne     00430A22
:00430A15 833DD826430000      cmp     dword ptr [004326D8], 00000000
:00430A1C 0F84E0000000      je      00430B02 <---- if not, jump to bad boy

```

* Referenced by a (U)nconditional or (C)onditional Jump at Address:
|:00430A13(C)

```

:00430A22 A194264300      mov     eax, dword ptr [00432694]

```

Step 17. Now you'll have take a good look. Hmm, 430B02 is too far to jump from 430A1C, do you think that it'll jump too far if good boy? I don't think so. Look at 430B02 address:

```

:00430B02 A1A0264300      mov     eax, dword ptr [004326A0]
:00430B07 E86C04FFFF      call    00420F78
....
....
....
:00430B26 E8C928FDFF      call    004033F4
:00430B2B C3             ret

```

As you see 430B02 is located nearly to 430B2B (it says to go back before it calls

this procedure) So it couldn't be that jump, so what I usually have to do is, to

find the last comparison before RET command.

Step 18. Now we'll have to look down and find:

```

:00430ADC 740C             je      00430AEA <---- if kewl, jump to good boy

```

```

:00430ADE A1A0264300      mov eax, dword ptr [004326A0]
:00430AE3 E89004FFFF      call 00420F78
:00430AE8 EB22            jmp 00430B0C <---- jump to bad boy (final part)

```

* Referenced by a (U)nconditional or (C)onditional Jump at Address:
|:00430ADC(C)

```

:00430AEA A19C264300      mov eax, dword ptr [0043269C]
:00430AEF 8B80E0010000     mov eax, dword ptr [eax+000001E0]
:00430AF5 8B15D4264300     mov edx, dword ptr [004326D4] <---- regcode!

```

So we know we'll have to fix 430ADC address! Make sure the green color bar is on 00430ADC 740C and you should see Offset address below on the screen like @Offset 0002FEDCh. It's where you can patch it in TRAYRUN.EXE.

Step 19. Go back to WC, run HIEW TRAYRUN.EXE, press F4 to select Decode mode (ASM), press F5 and enter 2FEDC. You should see like:

```

0002FEDC: 740C      je      00002FEEA  ----- (1)
0002FEDE: A1A0264300 mov     eax,[0004326A0]
0002FEE3: E89004FFFF call    000020378  ----- (2)
0002FEE8: EB22      jmps    00002FF0C  ----- (3)
0002FEEA: A19C264300 mov     eax,[00043269C]

```

That's where you can change the bytes, press F3, enter EB and press F9 to update TRAYRUN.EXE. Exit HIEW.

Step 20. Now run TRAYRUN.EXE.. No NAG so far, now click About. WOW, it's registered! :-)

PART 5: Pascal Source Code for a Patcher by tKC/PC '98

Uses Crt;

```

Const A: Array[1..1] of Record {<----- 1 bytes to be patched}
      A : Longint;
      B : Byte;
      End =
((A:$28436;B:$EB)); {<----- offset "28436" and byte "EB" to be changed}

```

```

Var Ch:Char;
    I:Byte;
    F:File;
    FN:file of byte;
    Size:longint;

```

Begin

```

Writeln('Little Patch');writeln('Crack for Quake 2 3.10 by tKC/PC ''98');
Assign(F,'QUAKE2.EXE'); {<----- filename to be patched}
{$I-} Reset(F,1); {$I+}
If IOResult <> 0 then
  begin
    writeln('File not found!');
    halt(1);
  end;
For I:=1 to 1 do {<----- 4 bytes to be patched}
Begin
  Seek(F,A[I].A);
  Ch:=Char(A[I].B);
  Blockwrite(F,Ch,1);
End;
Writeln('File successfully patched!');

```

End.

LAST WORDS:

I hope you've enjoyed this tutor too much as I did! :-)
I'll see you next time at Tutor #7!

PersGreetz to Celeste, Hanna, Kandi, Lizel, Taha, PowerLord and everyone at PC98 Channel!

This tutor is dedicated to Celeste .. pretty woman

You can find me at #PC98 or email me at tkc@goplay.com

Enjoy it,
The Keyboard Caper,

A Tutorial On Different Approaches To Cracking - TekFacts95 v1.40.4 (8/04/97)
.o00o..o00o..o00o. by THATDUDE [PC & GLoW] .o00o..o00o..o00o.

Program Stats:

What it is: A system util to check CPU usage, etc.

Where to get: <http://ourworld.compuserve.com/homepages/deansoft> or

<http://www.winutils.com/>

Size: 583kb (zipped)

Protection: Start-up NaG, Delay, "unregistered" text in several places, Name/Code entry

Tools to crack:

W32Dasm v8.9

Hex editor of your choice...

OK.. I'll attempt to explain my thought processes while cracking TekFacts...

First thing I do before anything: Unzip and install! =) No install for TekFacts95, just unzip it and run the .EXE...

OK, lets run the program and take a good look. We start it up and see the NaG and time delay, then it pops us into the program and we see it has "<Unregistered Version>" in the title bar.

Let's check the About box... it shows us a place to enter a registration number and first/last name. Enter a First name / Last name / Random code, and take note of the text in the box telling us our code is not correct... Alright, lets open this baby up in a hex editor.

(I use UltraEdit32) Let's search for "regist" in case insensitive acsii.. Always do this before using a disassembler. It can give you many tips on how to attack the program... sometimes the registration code is hardcoded into the .exe! After taking a careful look, let's disassemble it!

So, lets start up W32Dasm (I use v8.9 - thanks Revolt! ;) and disassemble this file. While waiting for the file to be disassembled, we can think about how we will attack the program. Since there is a name/serial entry, we can always go for the "Any name/Code" type of crack. Let's do that technique first then.

We remember that the text from the invalid registration box was "Registration Key Failed!"

In w32dasm, go to Refs|String Data References.

Scroll down the list of references until we find "Registration Key Failed!" =)

Double click on it and w32dasm will take you to the spot in the program.

(As a note, always try double clicking on the string reference more than once... often there is more than one occurrence of the string in the file, in TekFacts there is only 1 string.) Close the String Data References box and scroll up a little... we see:

* Referenced by a (U)nconditional or (C)onditional Jump at Address:

|:00475C56(C)

|

:00475D8A 6A30 push 00000030

* Reference To: user32.MessageBeep, Ord:0000h

|

:00475D8C E8A705F9FF Call 00406338

* Possible StringData Ref from Code Obj ->"Registration Key Failed!"

|

:00475D91 B8F05E4700 mov eax, 00475EF0

:00475D96 E8F51DFCFF call 00437B90

We see that at 00475C56 there is a Conditional jump to the bad regkey box. Scroll up some and take a look at where this conditional jump occurs.

```

:00475C51 E87ED0F8FF      call 00402CD4
:00475C56 0F852E010000    jne 00475D8A           ; Conditional jump to
BAD reg
:00475C5C 8D45B7          lea eax, dword ptr [ebp-49]
:00475C5F BA545E4700      mov edx, 00475E54
:00475C64 B114          mov cl, 14

.: SNIP :.

* Possible StringData Ref from Code Obj ->"Software\Dean Software\TechFacts95"

.: SNIP :.

* Possible StringData Ref from Code Obj ->"sRegStat"           ; Registry Key - Code

.: SNIP :.

* Possible StringData Ref from Code Obj ->"Config"

.: SNIP :.

* Possible StringData Ref from Code Obj ->"sUser"             ; Registry Key - Name

.: SNIP :.

* Possible StringData Ref from Code Obj ->"Config"

.: SNIP :.

* Possible StringData Ref from Code Obj ->"Registration Key accepted!"
|
:00475D75 B8CC5E4700      mov eax, 00475ECC
:00475D7A E8111EFCFF      call 00437B90
:00475D7F 66C70580964E000100  mov word ptr [004E9680], 0001 ; RegFlag City!
:00475D88 EB11          jmp 00475D9B

```

That snippet from w32dasm tells us a lot! (Assuming you understand the ASM ;)
 OK.. so how to crack this for any name/code? Change the conditional jump at 00475C56!
 Load up TekFacts with your hex editor and change the bytes.

Original String: 0F852E010000
 Change it to : 909090909090
 This will prevent the program from ever going to the bad registration dialog, and it
 will allow the prog to continue on it's way, processing all the way to the good
 regbox.

While changing: 0F852E010000
 to : 0F842E010000
 can also work... why risk the chance of it ever jumping to the bad regbox? Sometimes
 more
 byte changes are better.

You can also change: 0F852E010000
 to this instead : 489040409048
 which works just as well as 909090909090.... but is a more "professional" way to do
 it.

Now the test! Run it and try it. Wow! It worked! =)
 Always test by closing down the program all the way and re-launching it!
 Still registered! Great! =)

Are we done? ... We could be, but lets take a deeper look at the program and have some more fun. ;) Take a look at the code above again. The program writes the registration info into the registry, where it reads this info on startup. (Regmon can confirm this if you don't trust me ;) Anyway, let's open up the registry and see what's there.

In the registry we see some very interesting stuff...:
[HKEY_CURRENT_USER\Software\Dean Software\TechFacts95\Config]
"sRegStat"="TFIETPBJJ7200"
"sUser"="tHATDUDE Phrozen"

I entered this info:
First Name: tHATDUDE
Last Name : Phrozen
RegKey : 32441234342 (just hit a bunch of keys =)

"Are you thinking what I'm thinking??"
"Yeah.. Alicia Silverstone has a great ass!"
"DOH!"

=)

Anyway.. We're thinking the program stores the *CORRECT* reginfo! (actually we would know this if we followed the ASM carefully...) Anyway.. restore a clean .EXE and test it.. it still runs regged! Now we can export those regkeys and release that as a .REG file! (Export them by selecting them, then going to Registry|Export registry file...) The advantage of this is that it would most likely work with a new version or build.

So now we have 2 cracks. 1 to use any name/code, and 1 to merge the reginfo into the registry.

Are we done? ... Well, let's take yet another approach to cracking this program. Remember the "<Unregistered Version>" text in the title bar of the program when unregistered? This is a bad idea by the author because it is another attack point. (Why another attack point? Because we know it will not be shown when registered!)

In w32dasm, go to Refs|String Data References. Scroll down the list of references until we find "<Unregistered Version>" ... Double click on it and take a look at the code around it:

```
:0048E3B1 66833D80964E0000    cmp word ptr [004E9680], 0000    ; Doesn't this look
familiar?
:0048E3B9 7522                  jne 0048E3DD                    ; if 004E9680 is NOT 0, it
will jump
:0048E3BB B201                  mov dl, 01
:0048E3BD 8B83C4010000          mov eax, dword ptr [ebx+000001C4]
:0048E3C3 E8348BF8FF            call 00416EFC
```

* Possible StringData Ref from Code Obj ->"<Unregistered Version>"

```
|
:0048E3C8 BAD0E44800          mov edx, 0048E4D0
:0048E3CD 8B83E0010000          mov eax, dword ptr [ebx+000001E0]
:0048E3D3 E8F88BF8FF            call 00416FD0
:0048E3D8 E9C7000000          jmp 0048E4A4
```

What can we conclude from the code above? That the program works on a RegFlag system. A RegFlag is a 0 or a 1, which the program checks against to see if it is registered or not.

If we toggle this flag to our favor, we can crack it and not rely on the user to be smart enough to enter any name/code. <G> It will just run registered. It works well

for this program, especially since it does not display any name or serial of any sort anywhere in the program.

Remember that at address 00475D7F, I commented with "RegFlag City!"

```
* Possible StringData Ref from Code Obj ->"Registration Key accepted!"
|
:00475D75 B8CC5E4700      mov eax, 00475ECC
:00475D7A E8111EFCFF      call 00437B90
:00475D7F 66C70580964E000100  mov word ptr [004E9680], 0001 ; RegFlag City!
:00475D88 EB11           jmp 00475D9B
```

Do you see why? When registration is successful, 1 is moved into [004E9680]. But... we want to find a place to shove 1 into [004E9680] without the user having to do anything. So, search for 004E9680 in w32dasm.

We notice several compare's and we see that if the flag is set it will jump past all the icky stuff we don't like => We finally end here...:

```
* Possible StringData Ref from Code Obj ->"TechFacts 95" ; Program
Starts...
|
:004C81F5 BAD0864C00      mov edx, 004C86D0
:004C81FA 8B45FC          mov eax, dword ptr [ebp-04]
:004C81FD E8CEEDF4FF      call 00416FD0
:004C8202 B88C000000      mov eax, 0000008C
:004C8207 E8E4D3FAFF      call 004755F0
:004C820C 84C0           test al, al
:004C820E 750B           jne 004C821B
:004C8210 66C70580964E000000  mov word ptr [004E9680], 0000 ; Moves in 0 to
set default                                     as
UNREGISTERED...
:004C8219 EB09           jmp 004C8224
```

```
"Are you thinking what I'm thinking??"
"Yeah.. but how are we gonna get enough Jello to fill the whole pool?"
"DOH!@"
```

=>

```
Change : 66C70580964E000000
To this : 66C70580964E000100
```

And it now moves 1 into 004E9680 as default... Run it.. regged!! =)
So... We can now crack TekFacts in *3* different ways. (Assuming you didn't start zoning after the first few lines.. =) So does this mean you can now crack every program out there?? err.. no, but it's a start. =) Don't be afraid to poke around with a program... tinkering around in SoftICE or W32Dasm *and* using your brain can teach you much more than anyone can ever teach you through a tutorial.

```
"Are you thinking what I'm thinking??"
"Huh? Did you say something? I wasn't listening.."
"DOH!@# =))))"
```

tHATDUDE [PC / GLoW]

Greetz to:

tKC, [madmax], Baloosh, Saltine, Archimede, AlieN, n00dles, STaRDoGG, |mb|, BLiTz, AquA, Durk, Byte Ripper, cH, eMX, Giraffe, G-RoM, Jestrz, Killer+Bee, Plushmm, Reformed, Tail Gunner, daze, TeRaPhY, XLogic, Fingers, Rayf00, tasm, Saga, jes, lgb, NinJak, taylor^, razzia, FXer, LordByte, SuperChic, Fryguy_, Cool-Hand, everyone in PC!! =)

"Are you thinking what I'm thinking??"

"Yeah.. you have too many greets!"

"DOH@!\$!"
